Smog Check Advisory

Automotive Engine Performance, published as part of the CDX Master Automotive Technician Series, provides technicians in training with a detailed overview of modern engine technologies and diagnostic strategies. Taking a "strategy-based diagnostic" approach, it helps students master the skills needed to diagnose and resolve customer concerns correctly on the first attempt. Students will gain an understanding of current diagnostic tools and advanced performance systems as they prepare to service the engines of tomorrow.

Modern cars are more computerized than ever. Infotainment and navigation systems, Wi-Fi, automatic software updates, and other innovations aim to make driving more convenient. But vehicle technologies haven't kept pace with today's more hostile security environment, leaving millions vulnerable to attack. The Car Hacker's Handbook will give you a deeper understanding of the computer systems and embedded software in modern vehicles. It begins by examining vulnerabilities and providing detailed explanations of communications over the CAN bus and between devices and systems. Then, once you have an understanding of a vehicle's communication network, you'll learn how to intercept data and perform specific hacks to track vehicles, unlock doors, glitch engines, flood communication, and more. With a focus on low-cost, open source hacking tools such as Metasploit, Wireshark, Kayak, can-utils, and ChipWhisperer, The Car Hacker's Handbook will show you how to:

- Build an accurate threat model for your vehicle
- Reverse engineer the CAN bus to fake engine signals
- Exploit vulnerabilities in diagnostic and data-logging systems
- Hack the ECU and other firmware and embedded

systems -Feed exploits through infotainment and vehicle-to-vehicle communication systems -Override factory settings with performance-tuning techniques -Build physical and virtual test benches to try out exploits safely If you're curious about automotive security and have the urge to hack a two-ton computer, make *The Car Hacker's Handbook* your first stop.

Forty-eight percent of U.S. households perform at least some automobile maintenance on their own, with women now accounting for one third of this \$34 billion automotive do-it-yourself market. For new or would-be do-it-yourself mechanics, this illustrated how-to guide has long been a must and now it's even better. A complete reorganization now puts relevant repair and maintenance information directly after each automotive system overview, making it much easier to find hands-on fix-it instructions. Author Deanna Sclar has updated systems and repair information throughout, eliminating discussions of carburetors and adding coverage of hybrid and alternative fuel vehicles. She's also revised schedules for tune-ups and oil changes, included driving tips that can save on maintenance and repair costs, and added new advice on troubleshooting problems and determining when to call in a professional mechanic. For anyone who wants to save money on car repairs and maintenance, this book is the place to start. Deanna Sclar (Long Beach, CA), an acclaimed auto repair expert and consumer advocate, has contributed to the Los Angeles Times and has been interviewed on the Today show, NBC Nightly News, and other television programs.

Hormones and Atherosclerosis

Hormones and Atherosclerosis covers the proceedings of the conference held in Brighton, Utah on March 11-14, 1958. The book focuses on the role of hormones in atherosclerosis, as well as cholesterol metabolism and biosynthesis, lipogenesis, and lipid transport. The selection first discusses the biosynthesis of cholesterol and aspects of the biosynthesis of cholesterol from mevalonic acid. Discussions focus on components of liver homogenates and coenzymes required for squalene and sterol synthesis from mevalonic acid and preservation of enzymes and microsomes. The text also ponders on the formation and metabolism of bile acids under different conditions and thyroid function, thyroxine analogs, and cholesterol metabolism in rats and rabbits. The book elaborates on the comparison of the participations of fibroblasts and reticuloendothelial cells in the synthesis and metabolism of cortisol and cholesterol and control of aortal lipid metabolism and

lipid movement by hormones and vitamins. The manuscript also examines the influence of estrogens on lipids and atherosclerosis in experimental animals and the effect of adrenals, pituitary, liver, and mucopolysaccharides on blood lipids. The selection is a dependable reference for readers interested in the relationship of hormones and atherosclerosis.
