1 Plantation forests and biodiversity: Oxymoron or opportunity? Forests form the

natural vegetation over much of the Earth's land, and they are critical for the survival of innumerable organisms. The ongoing loss of natural forests, which in some regions may have taken many millennia to develop, is one of the main reasons for the decline of biodiversity. Preventing the further destruction of forests and protecting species and ecosystems within forests have become central issues for environmental agencies, forest managers, and governments. In this difficult task science has an important role in informing policy and management as to how to go about this. So how do industrial and other plantation forests fit into this? Plantation forests, comprised of rows of planted trees that may be destined for pulp or sawmills after only a few years of growth, appear to have little to contribute to the conservation of biodiversity. Yet there is more to this than meets the eye (of the casual observer), and there are indeed numerous opportunities, and often untapped potential, for biodiversity conservation in plantation forestry. With plantation forests expanding at a rate of approximately three million hectares per year, it is crucial to understand how plantations can make a positive contribution to biodiversity conservation and how the potentially negative impacts of this land use can be minimised. That is the topic of this book.

This textbook presents global supply chain and operations management from a comprehensive perspective, combining value creation networks and interacting processes. It focuses on the operational roles in the networks and presents the quantitative and organizational methods needed to plan and control the material, information and financial flows in the supply chain. Each chapter of the book starts with an introductory case study. Numerous examples from various industries and services help to illustrate the key concepts. The book explains how to design operations and supply networks and how to incorporate suppliers and customers. As matching supply and demand is a core aspect of tactical planning, the book focuses on it before turning to the allocation of resources for fulfilling customer demands. Providing readers with a working knowledge of global supply chain and operations management, this textbook can be used in core, special and advanced classes. Therefore, the book targets a broad range of students and professionals involved with supply chain and operations management. Special focus is directed at bridging theory and practice.

Medicinal Plants and Fungi: Recent Advances in Research and Development

For decades, Markus Wolf was known to Western intelligence officers only as "the man without a face." Now the legendary spymaster has emerged from the shadows to reveal his remarkable life of secrets, lies, and betrayals as head of the world's most formidable and effective foreign service ever. Wolf was undoubtedly the greatest spymaster of our century. A shadowy Cold War legend who kept his own past locked up as tightly as the state secrets with which he was entrusted, Wolf finally broke his silence in 1997. *Man Without a Face* is the result. It details all of Wolf's major successes and failures and illuminates the reality of espionage operations as few nonfiction works before it. Wolf tells the real story of Gunter Guillaume, the East German spy who brought down Willy Brandt. He reveals the truth behind East Germany's involvement with terrorism. He takes us inside the bowels of the Stasi headquarters and inside the minds of Eastern Bloc leaders. With its high-speed chases, hidden cameras, phony brothels, secret codes, false identities, and triple agents, *Man Without a Face* reads like a classic spy thriller—except this time the action is real.

Dual specificity phosphatases (DUSPs) constitute a heterogeneous group of protein tyrosine phosphatases with the ability to dephosphorylate Ser/Thr and Tyr residues from proteins, as well as from other non-proteinaceous substrates including

signaling lipids. DUSPs include, among others, MAP kinase (MAPK) phosphatases (MKPs) and small-size atypical DUSPs. MKPs are enzymes specialized in regulating the activity and subcellular location of MAPKs, whereas the function of small-size atypical DUSPs seems to be more diverse. DUSPs have emerged as key players in the regulation of cell growth, differentiation, stress response, and apoptosis. DUSPs regulate essential physiological processes, including immunity, neurobiology and metabolic homeostasis, and have been implicated in tumorigenesis, pathological inflammation and metabolic disorders. Accordingly, alterations in the expression or function of MKPs and small-size atypical DUSPs have consequences essential to human disease, making these enzymes potential biological markers and therapeutic targets. This Special Issue covers recent advances in the molecular mechanisms and biological functions of MKPs and small-size atypical DUSPs, and their relevance in human disease.

Fatalities on U.S. roads now total over 40,000 each year. Future reductions may require the Dept. of Transportation (DoT) to address new trends such as evolving crash-avoidance technologies and rapidly changing electronic devices that may distract drivers who use them on the road. This report examines how DoT is addressing fast-moving trends such as these, and examines how DoT is: (1) deciding on responses to the crash avoidance and electronic distractions trends --given available evidence and uncertainties; (2) developing new evidence on these trends' safety impacts; and (3) communicating with the Congress about these and other trends and related issues. Includes recommendations. Illustrations.

This book introduces the reader to synthetic or artificial seeds, which refer to alginate encapsulated somatic embryos, vegetative buds or any other micropropagules that can be used as seeds and converted into plantlets after propagating under in vitro or in vivo conditions. Moreover, synthetic seeds retain their potential for regeneration even after low-temperature storage. The production of synthetic or artificial seeds using micropropagules opens up new vistas in agricultural biotechnology. Encapsulated propagules could be used for in vitro regeneration and mass multiplication at reasonable cost. In addition, these propagules may be used for germplasm preservation of elite plant species and the exchange of plant materials between national and international laboratories. This book offers state-of-the-art findings on methods, applications and prospects of synthetic or artificial seeds.

Consumers — exposed to roughly four thousand marketing messages a day — are no longer willing to be part of a passive consumer base, subject to conventional advertising and marketing. Rather, they are joining a growing tribe of brand atheists who don't want to be targeted by impersonal messages. They want dialogue, which marketers give to them through experiences with brands that are personally relevant, memorable, and meaningful. This is the context for Max Lenderman's experiential marketing (XM) revolution. Lenderman explains who the new cutting-edge marketers are, how they think and operate, and why they matter in today's shifting brand world. He reveals how companies can interact with consumers in meaningful ways and what consumers should expect from companies that want their attention and loyalty. Max has led successful experiential campaigns for Fortune 500 companies and smaller businesses. Here, he unveils groundbreaking case studies and discusses the latest trends in experiential marketing—buzz, sub-viral marketing, roach marketing, text marketing, flash mobs, pop-up retail, advergaming, retailainment, and causal marketing. Experience the Message gives its readers—consumers and marketers the essential knowledge they need to charge to the front of the global marketing movement.

Citrus greening, a disease that reduces yield, compromises the flavor, color, and

size of citrus fruit and eventually kills the citrus tree, is now present in all 34 Floridian citrus-producing counties. Caused by an insect-spread bacterial infection, the disease reduced citrus production in 2008 by several percent and continues to spread, threatening the existence of Florida's \$9.3 billion citrus industry. A successful citrus greening response will focus on earlier detection of diseased trees, so that these sources of new infections can be removed more quickly, and on new methods to control the insects that carry the bacteria. In the longer term, technologies such as genomics could be used to develop new citrus strains that are resistant to both the bacteria and the insect.

Auto Repair For Dummies, 2nd Edition (9781119543619) was previously published as Auto Repair For Dummies, 2nd Edition (9780764599026). While this version features a new Dummies cover and design, the content is the same as the prior release and should not be considered a new or updated product. The top-selling auto repair guide--400,000 copies sold--now extensively reorganized and updated Forty-eight percent of U.S. households perform at least some automobile maintenance on their own, with women now accounting for one third of this \$34 billion automotive do-it-yourself market. For new or would-be do-it-yourself mechanics, this illustrated how-to guide has long been a must and now it's even better. A complete reorganization now puts relevant repair and maintenance information directly after each automotive system overview, making it much easier to find hands-on fix-it instructions. Author Deanna Sclar has updated systems and repair information throughout, eliminating discussions of carburetors and adding coverage of hybrid and alternative fuel vehicles. She's also revised schedules for tune-ups and oil changes, included driving tips that can save on maintenance and repair costs, and added new advice on troubleshooting problems and determining when to call in a professional mechanic. For anyone who wants to save money on car repairs and maintenance, this book is the place to start. Deanna Sclar (Long Beach, CA), an acclaimed auto repair expert and consumer advocate, has contributed to the Los Angeles Times and has been interviewed on the Today show, NBC Nightly News, and other television programs.

Ward's Auto World

The global crisis the automotive industry has slipped into over the second half of 2008 has set a fierce spotlight not only on which cars are the right ones to bring to the market but also on how these cars are developed. Be it OEMs developing new models, suppliers integrating themselves deeper into the development processes of different OEMs, analysts estimating economical risks and opportunities of automotive investments, or even governments creating and evaluating scenarios for financial aid for suffering automotive companies: At the end of the day, it is absolutely indispensable to comprehensively understand the processes of automotive development – the core subject of this book. Let's face it: More than a century after Carl Benz, Wilhelm Maybach and Gottlieb Daimler developed and produced their first motor vehicles, the overall concept of passenger cars has not changed much. Even though components have been considerably optimized since then, motor cars in the 21st century are still driven by combustion engines that transmit their propulsive power to the road surface via gearboxes, transmission shafts and wheels, which together with spring-damper units allow driving stability and ride comfort. Vehicles are still navigated by means of a steering wheel that turns the front wheels, and the required control elements are still located on a dashboard in front of the driver who operates the car sitting in a seat.

The Iranian languages form the major eastern branch of the Indo-European group of languages, itself part of the larger Indo-Iranian family. Estimated to have between 150 and 200 million native speakers, the Iranian languages constitute one of the world's major language families. This comprehensive volume offers a detailed overview of the principle languages which make up this group: Old Iranian, Middle Iranian, and New Iranian. The Iranian Languages is divided into fifteen chapters. The introductory chapters by the editor present a general overview and a detailed discussion of the linguistic typology of Iranian. The individual chapters which follow are written by leading experts in the field. These provide the reader with concise, non-technical descriptions of a range of Iranian languages. Each chapter follows the same pattern and sequence of topics, taking the reader through the significant features not only of phonology and morphology but also of syntax; from phrase level to complex sentences and pragmatics. Ample examples on all levels are provided with detailed annotation for the non-specialist reader. In addition, each chapter covers lexis, sociolinguistic and typological issues, and concludes with annotated sample texts. This unique resource is the

ideal companion for undergraduate and postgraduate students of linguistics and language. It will also be of interest to researchers or anyone with an interest in historical linguistics, linguistics anthropology and language development. Gernot Windfuhr is Professor of Iranian Studies at the University of Michigan; he has published widely on Persian and Iranian languages and linguistics and related languages, as well as on other aspects of Iranian culture including Persian literature and Pre-Islamic Iranian religions.

This book highlights the latest international research on different aspects of medicinal plants and fungi. Studies over the last decade have demonstrated that bioactive compounds isolated from medicinal fungi have promising antitumor, cardiovascular, immunomodulatory, anti-allergic, anti-diabetic, and hepatoprotective properties. In the light of these studies, the book includes chapters (mostly review articles) by eminent researchers from twelve countries across the globe working in different disciplines of medicinal plants and fungi. It discusses topics such as the prevention of major neurodegenerative and neurotoxic mechanisms by *Centella asiatica*; the medicinal properties and therapeutic applications of several mushrooms species found in different parts of the world; and fungal endophytes as a source of bioactive metabolites including anticancer and cardioprotective agents. There are also chapters on strategies for identifying bioactive secondary metabolites of fungal origin; the use of genomic information to explore the biotechnological potential of medicinal mushrooms; and solid state fermentation of agro-industrial and forestry residues for the production of medicinal mushrooms. It is a valuable resource for the researchers, professionals and students working in the area of medicinal plants and fungi.

The metabolomics approach, defined as the study of all endogenously-produced low-molecular-weight compounds, appeared as a promising strategy to define new cancer biomarkers. Information obtained from metabolomic data can help to highlight disrupted cellular pathways and, consequently, contribute to the development of new-targeted therapies and the optimization of therapeutics. Therefore, metabolomic research may be more clinically translatable than other omics approaches, since metabolites are closely related to the phenotype and the metabolome is sensitive to many factors. Metabolomics seems promising to identify key metabolic pathways characterizing features of pathological and physiological states. Thus, knowing that tumor metabolism markedly differs from the metabolism of normal cells, the use of metabolomics is ideally suited for biomarker research. Some works have already focused on the application of metabolomic approaches to different cancers, namely lung, breast and liver, using urine, exhaled breath and blood. In this Special Issue we contribute to a more complete understanding of cancer disease using metabolomics approaches.

Unlike most biotechnology textbooks, Dr. David P. Clark's Biotechnology approaches modern biotechnology from a molecular basis, which grew out of the increasing biochemical understanding of physiology. Using straightforward, less-technical jargon, Clark manages to introduce each chapter with a basic concept that ultimately evolves into a more specific detailed principle. This up-to-date text covers a wide realm of topics, including forensics and bioethics, using colorful illustrations and concise applications. This book will help readers understand molecular biotechnology as a scientific discipline, how the research in this area is conducted, and how this technology may impact the future. · Up-to-date text focuses on modern biotechnology with a molecular foundation · Basic concepts followed by more detailed, specific applications · Clear, color illustrations of key topics and concepts · Clearly written without overly technical jargon or complicated examples

Christianity may be the greatest story ever told, but in Western culture it is losing ground against the powerful forces of secularization. In examining the root causes of this cultural shift, does the church have anything to learn from secular society

and the business sector? For decades the church has resisted the idea of using business methodologies in the religious sphere. Yet a closer look reveals that most church hierarchies have borrowed much of their organizational structure from the business sector. But the church is not alone in its borrowing. Today the lines between the church and the business sector are blurred, as both entities influence each other interchangeably. In *Branded Faith*, Rajkumar Dixit enters an engaging and intellectually stimulating analysis of what the church can learn from the business practices of marketing, branding, and contextualization. Using examples drawn from widely recognized companies such as Nike, Starbucks, Coca-Cola, and Subway, Dixit systematically builds a case for the power of a story, and emphasizes the importance of seeking culturally relevant ways to spread it. Those who care deeply about sharing Christianity powerfully and effectively will find in *Branded Faith* a thoughtful presentation of ideas on how to maintain the integrity of the gospel, while exploring fresh methods of communicating the good news to a postmodern society.
