This book argues that modern macroeconomics has completely overlooked the aggregate nature of the data. In Part I the homogeneity assumption is tested using disaggregate data and strongly rejected. As shown in Part II, the consequence of introducing heterogeneity is that, apart from flukes, cointegration unidirectional Granger causality, restrictions on parameters do not survive aggregation: thus the claim that modern macroeconomics has solid microfoundations is unwarranted. However, it is argued in Part III that aggregation is not necessarily bad. Some important theory-based models that do not fit aggregate data well in their representative-agent version can be reconciled with aggregate data by introducing heterogeneity.

The first in the historically rich, atmospheric mystery series featuring female exorcist Reverend Merrily Watkins The new vicar had never wanted a picture-postcard parish—or a huge and haunted vicarage. Nor had she wanted to walk into a dispute over a controversial play about a 17th-century clergyman accused of witchcraft, a story that certain long-established families would rather remained obscure. But this is Ledwardine, steeped in cider and secrets. A paradise of cobbled streets and timber-framed houses. And also—as Merrily Watkins and her teenage daughter, Jane, discover—a village where horrific murder is a tradition that spans centuries.

Now in paperback, the book critics and readers have hailed as a remarkable story of friendship, inspired by gardening. Renowned New Yorker editor Katharine White and Southern garden writer Elizabeth Lawrence began a correspondence in 1958 that lasted until Katharine White's death in 1977. These letters, edited and introduced by Emily Herring Wilson, bring to life the unique friendship between two intelligent women, both avid gardeners and legendary writers. More than 150 letters went back and forth during the course of their near-20-year correspondence, though Katharine and Elizabeth would meet face-to-face only once. Whether talking about their gardens or books, friends or family, each held a special place in the other's life. Illustrated with photographs of both Katharine White and Elizabeth Lawrence, their families, gardens, and houses, *Two Gardeners* is a special treat for gardeners, literature lovers, and anyone who delights in reading about women's friendships. Emily Herring Wilson is a writer, lecturer, and novice gardener living in Winston-Salem, North Carolina. Author of two previous books, she is currently writing a biography of Elizabeth Lawrence.

Susan Fenimore Cooper (1813-1894), though often overshadowed by her celebrity father, James Fenimore Cooper, has recently become recognized as both a pioneer of American nature writing and an early advocate for ecological sustainability. Editors Rochelle Johnson and Daniel Patterson have assembled here a collection of ten pieces by Cooper that represent her most accomplished nature writing and the fullest articulation of her environmental principles. With one exception, these essays have not been available in print since their original appearance in Cooper's lifetime. A portrait of her thoughts on nature and how we should live and think in relation to it, this collection both contextualizes Cooper's magnum opus, *Rural Hours* (1850), and demonstrates how she perceived her work as a nature writer. Frequently her essays

are models of how to catch and keep the interest of a reader when writing about plants, animals, and our relationship to the physical environment. By lamenting the decline of bird populations, original forests, and overall biodiversity, she champions preservation and invokes a collective environmental conscience that would not begin to awaken until the end of her life and century. The selections include independent essays, miscellaneous introductions and prefaces, and the first three installments from Cooper's work of literary ornithology, "Otsego Leaves," arguably her most mature and fully realized contribution to American environmental writing. In addition to a foreword by John Elder, one of the nation's leading environmental educators, an introduction analyzes each essay in various cultural contexts. Brief but handy textual notes supplement the essays. Perfect for nature-writing aficionados, environmental historians, and environmental activists, this collection will radically expand Cooper's importance to the history of American environmental thought.

This wonderful book is for anyone interested in making their life significantly better. It is a goldmine of insights and techniques from one of the greatest geniuses of personal change. As you use the techniques in this book, you will exponentially increase your ability to make dramatic life-enhancing differences. It is by far one of the most entertaining and professionally stimulating books I have read. It will change your life!"--Paul McKenna, Ph.D, author of I Can Make You Thin and host of The Learning Channel's I Can Make You More than thirty years ago, Richard Bandler set out to discover how some therapists managed to effect startling change with their clients, while others were arguing about theories as their face patients waited in vain for help. Now widely regarded as the world's greatest hypnotist, Richard Bandler observed and developed patterns which became the foundation of neuro-linguistic programming (NLP), arguably one of the most profoundly effective approaches for self-development and change. Since coauthoring the internationally influential books, The Structure of Magic Volume 1, and Patterns of the Hypnotic Techniques of Milton Erickson, M.D. Volume 1, Bandler has traveled the world, honing his skills and helping people solve problems and achieve goals when other "experts" have been unable to help. Richard Bandler's Guide to TRANCE-formation, he returns to his roots: hypnotic phenomena, trancework, and altered states to provide a highly compelling prescription for personal change. According to Bandler, "trance" is at the very foundation of human experience. People are not simply in or out of trance, but are moving from one trance to another. They have their work trances, their relationship trances, their driving trances, and their parenting trances. Some of these states are useful and appropriate; others are not. With his signature wit and contrarian approach to therapy, Bandler shows how anyone can reset or reprogram problem behaviors to desired alternatives, with lasting and life-altering results. Peppared with case studies and more than thirty exercises, Richard Bandler's Guide to TRANCE-formation, is an intriguing, engaging, and often amusing, read for anyone, whether they are new to NLP, want to further their NLP training, or simply want to make a positive difference in their own lives.

When it was over, there were a lot of questions. The detectives were embarrassed but they still wanted answered, "How did a 15-year-old runaway successfully pose as a world traveled countess?" The newspapers turned it back on them, practically sneering, "How did she do it while under investigation by the FBI, DEA, and Interpol?" The Mafia had been demanding the same thing for six months, "What is your real name?" And the psychologists asked the question they always ask, "Why?" It's the why of it that will keep a girl in trouble. Assuming Names is the true story of a young con artist. The figure of Hamlet haunts our culture like the Ghost haunts him. Arguably, no literary work, not even the Bible, is more familiar to us than Shakespeare's Hamlet. Everyone knows at least six words from the play; often people know many more. Yet the play—Shakespeare's longest—is more than “passing strange” and becomes deeply unfamiliar when considered closely. Reading Hamlet alongside other writers, philosophers, and psychoanalysts—Carl Schmitt, Walter Benjamin, Freud, Lacan, Nietzsche, Melville, and Joyce—Simon Critchley and Jamieson Webster consider the political context and stakes of Shakespeare's play, its relation to religion, the movement of desire, and the incapacity to love.

Dealing with information is one of the vital skills in the 21st century. It takes a fair degree of information savvy to create, represent and supply information as well as to search for and retrieve relevant knowledge. How does information (documents, pieces of knowledge) have to be organized in order to be retrievable? What role does metadata play? What are search engines on the Web, or in corporate intranets, and how do they work? How must one deal with natural language processing and tools of knowledge organization, such as thesauri, classification systems, and ontologies? How useful is social tagging? How valuable are intellectually created abstracts and automatically prepared extracts? Which empirical methods allow for user research and which for the evaluation of information systems? This Handbook is a basic work of information science, providing a comprehensive overview of the current state of information retrieval and knowledge representation. It addresses readers from all professions and scientific disciplines, but particularly scholars, practitioners and students of Information Science, Library Science, Computer Science, Information Management, and Knowledge Management. This Handbook is a suitable reference work for Public and Academic Libraries.

Author Interview on The Brian Lehrer Show America is a weight-obsessed nation. Over the last decade, there's been an explosion of concern in the U.S. about people getting fatter. Plaintiffs are now filing lawsuits arguing that discrimination against fat people should be illegal. Fat Rights asks the first provocative questions that need to be raised about adding weight to lists of currently protected traits like race, gender, and disability. Is body fat an indicator of a character flaw or of incompetence on the job? Does it pose risks or costs to employers they should be allowed to evade? Or is it simply a stigmatized difference that does not bear on the ability to perform most jobs? Could we imagine fatness as part of workplace diversity? Considering fat discrimination prompts us to rethink these basic questions that lawyers, judges, and ordinary citizens ask before a new trait begins to look suitable for antidiscrimination coverage. Fat Rights draws on little-known legal cases brought by fat citizens as well as significant lawsuits over other forms of bodily difference (such as transgenderism), asking why the boundaries of our antidiscrimination laws rest where they do. Fatness, argues Kirkland, is both similar to and provocatively different from other protected traits, raising long-standing dilemmas in antidiscrimination law into stark relief. Though options for defending difference may be scarce, Kirkland evaluates the available strategies and proposes new ways of navigating this new legal question. Fat Rights enters the fray of the obesity debate from a new perspective: our inherited civil rights tradition. The scope is broad, covering much more than just weight discrimination and drawing the reader into the larger context of antidiscrimination protections and how they can be justified for a new group.

The US Department of Justice's National Institute of Justice (NIJ) asked the Institute of Medicine (IOM) of The National Academies to conduct a workshop that would examine the interface of the medicolegal death investigation system and the criminal justice system. NIJ was particularly interested in a workshop in which speakers would highlight not only the status and needs of the medicolegal death investigation system as currently administered by medical examiners and coroners but also its potential to meet emerging issues facing contemporary society in America. Additionally, the workshop was to highlight priority areas for a potential IOM study on this topic. To achieve those goals, IOM constituted the Committee for the Workshop on the Medicolegal Death Investigation System, which developed a workshop that focused on the role of the medical examiner and coroner death investigation system and its promise for improving both the criminal justice system and the public health and health care systems, and their ability to respond to terrorist threats and events. Six panels were formed to highlight different aspects of the medicolegal death investigation system, including ways to improve it and expand it beyond its traditional response and meet growing demands and challenges. This report summarizes the Workshop presentations and discussions that followed them.
