After saving Alfa Romeo from oblivion in 1987, it took Fiat nearly five years to debut the first new Alfa produced under its control. This is the story of how the competition versions of the 155/156/147 family of cars were developed and subsequently raced to many championship titles and race wins. Alfa Romeo's 155 saloon was a comprehensively successful racing touring car that won the German and world-wide DTM Championship, and later ITC races. The model also took on the role of representing the company in national touring car championships throughout the world, most notably winning the British Touring Car Championship in 1994. The 156 was Alfa's successor to the 155 and was also raced with much success. This book follows the development and competition history of this model

too, along with its sibling, the 147. Together, these models kept the Alfa Romeo name at the pinnacle of motor sport for many years, from 1992 to 2006, and will become future motorsport classics.

These important Sports Racing cars of 1967-1977 won the 1975 and 1977 Manufacturers World Championships. The definitive record, this is also the first book to be written about the history and development of Alfa Romeo's fabulous Championship-winning Tipo 33 prototypes. Containing many previously unseen photographs and interviews with key personalities, this is a vital addition to any Alfa enthusiasts collection.

Flight International

This indispensable new book covers all Alfa Romeo production cars, from 1910 to 1986. Technical and descriptive detail is given for each car, as well as information about the way each model evolved through its lifetime. Within an easy-to-use format, the book offers answers to the most frequently asked questions about Alfa Romeos, and is therefore of great value to potential buyers, collectors and enthusiasts. The photos, which are of the period and therefore completely reliable, provide a further means of comparison to help identification.

Guide to the Identification of Alfa Romeo Cars

This publication gives a comprehensive picture of the structure, development and characteristics of the European business economy and its different activities. It presents the latest available statistics from a wide selection of statistical sources describing for each activity: production and employment; country specialisation and regional distribution; cost structure, productivity and profitability; the importance of small and medium sized enterprises (SMEs); labour force characteristics; external trade and more. The publication covers 'the business economy', which is the sum of industry, construction and services (NACE Sections C to K). It does not cover agriculture, forestry and fishing, nor the public

administration and largely non-market services such as education and health. The business economy is divided into 23 main sections, which are analysed in detail in separate chapters. The first chapter provides a general overview of the EU's business economy, with comparisons across the main sectors. In addition, it provides information of a horizontal nature such as data on research and development, business demography, or the importance of foreign controlled enterprises. Following the accession of Bulgaria and Romania, data for the 27 Member States are now consistently being presented, with the EU-27 total as benchmark. This edition of European business also continues the efforts made in recent years to focus increasingly on official statistics, and to broaden and deepen the analysis as the European statistical system continues to make advances. A particular effort has been made in this edition to include, where available, data at the most detailed activity level (NACE four digit or class level) and to facilitate further comparisons across the different activities of the business economy (chapters and subchapters).

Alfa Romeo All-Alloy Twin Cam Companion provides an excellent technical and historical overview of the Giulietta and Giulia family of small sporting roadsters, coupes and sedans. If an Alfa Romeo had one of the all-alloy four-cylinder engines and reached production, it's covered in the Alfa Romeo All-Alloy Twin Cam Companion. That means that even after the Giulia name was dropped - particularly in the United States - the many variants of Duetto, GTV, Berlina and Alfetta are covered, from 1954 through 1994 when the final Alfas-including the four-cylinder Spiders-were sold in the United States. When it came to Alfa Romeos, author Pat Braden was an enthusiast's enthusiast. Pat didn't just write about Alfas - he lived and breathed Alfas. From the mid-1950s when he first owned a Giulietta Sprint until his death in August 2002, Pat had owned scores of Alfa Romeos, ranging from a 6C 1750GTC and an 8C 2300 to 1900s, Giuliettas, Giulias and countless later models. Alfa models are discussed according to history, engine, chassis and trouble spots. Without being a repair manual, this book contains important technical information needed to understand and enjoy one of these Alfas, as well as to perform many minor repair, maintenance, and service tasks. Braden starts

with a brief overview of Alfa Romeo history, followed by a look at Alfa's presence in America. He also explores the major models of coupe, spider and berlina that used the all-alloy four-cylinder, as well as the limited production variants. Of course, he also gives much attention to that mighty engine itself. Braden explains the design and history of the engine, as well as exploring trouble spots and offering extensive advice and tips. Additional technical sections focus on the fuel system, transmission, brakes and chassis, not to mention overall restoration. Alfa Romeo All-Alloy Twin Cam Companion is a key to getting the absolute maximum benefit and enjoyment out of Alfa.
