The State of Food and Agriculture 2019

In order for economic specialization to develop, it is important that well-defined property rights are established and that suspicion and fear of fraud do not pervade transactions. Such conditions cannot be created ex abrupto, but must somehow evolve. What needs to develop is not only suitable practices and rules themselves, but also the public agencies and moral environment without which generalized trust is difficult to establish. The cultural endowment of societies as they have developed over their particular histories is bound to play a major role in this regard, and the matter of cultural endowment is one of the central themes of this book. On the other hand, division of labour does not only require well-enforced property rights and trust in economic dealings. It is also critically conditioned by the thickness of economic space, itself dependent on population density. This provides the second major theme of the volume: market development, including the development of private property rights is not possible, or will remain very incomplete, if populations are thinly spread over large areas of land. The book makes special reference to sub-Saharan Africa.

Microeconomics

Based on: Nursing for wellness in older adults / Carol A. Miller. 7th ed. 2015.

Rethinking Investment Incentives

A new edition of the classic text explaining the fundamentals of competitive electricity markets—now updated to reflect the evolution of these markets and the large scale deployment of generation from renewable energy sources. The introduction of competition in the generation and retail of electricity has changed the ways in which power systems function. The design and operation of successful competitive electricity markets requires a sound understanding of both power systems engineering and underlying economic principles of a competitive market. This extensively revised and updated edition of the classic text on power system economics explains the basic economic principles underpinning the design, operation, and planning of modern power systems in a competitive environment. It also discusses the economics of renewable energy sources in electricity markets, the provision of incentives, and the cost of integrating renewables in the grid. *Fundamentals of Power System Economics, Second Edition* looks at the fundamental concepts of microeconomics, organization, and operation of electricity markets, market participants' strategies, operational reliability and ancillary services, network congestion and related LMP and transmission rights, transmission investment, and generation investment. It also expands the chapter on generation investments—discussing capacity mechanisms in more detail and the need for capacity markets aimed at ensuring that enough generation capacity is available when renewable energy sources are not producing due to lack of wind

or sun. Retains the highly praised first edition's focus and philosophy on the principles of competitive electricity markets and application of basic economics to power system operating and planning Includes an expanded chapter on power system operation that addresses the challenges stemming from the integration of renewable energy sources Addresses the need for additional flexibility and its provision by conventional generation, demand response, and energy storage Discusses the effects of the increased uncertainty on system operation Broadens its coverage of transmission investment and generation investment Updates end-of-chapter problems and accompanying solutions manual Fundamentals of Power System Economics, Second Edition is essential reading for graduate and undergraduate students, professors, practicing engineers, as well as all others who want to understand how economics and power system engineering interact.

Economics for Environmental Professionals

Marijuana legalization is a controversial and multifaceted issue that is now the subject of serious debate. In May 2014, Vermont Governor Peter Shumlin signed a bill requiring the Secretary of Administration to produce a report about various consequences of legalizing marijuana. This resulting report provides a foundation for thinking about the various consequences of different policy options while being explicit about the uncertainties involved.

Chronic Sorrow

"It is very exciting to see all of these studies compiled in one book. It can be read sequentially or just for certain transitions. It also can be used as a template for compilation of other concepts central to nursing and can serve as a resource for further studies in transitions. It is an excellent addition to the nursing literature." Score: 95, 4 Stars. --Doody's "Understanding and recognizing transitions are at the heart of health care reform and this current edition, with its numerous clinical examples and descriptions of nursing interventions, provides important lessons that can and should be incorporated into health policy. It is a brilliant book and an important contribution to nursing theory." Kathleen Dracup, RN, DNSc Dean and Professor, School of Nursing University of California San Francisco Afaf Meleis, the dean of the University of Pennsylvania School of Nursing, presents for the first time in a single volume her original "transitions theory" that integrates middle-range theory to assist nurses in facilitating positive transitions for patients, families, and communities. Nurses are consistently relied on to coach and support patients going through major life transitions, such as illness, recovery, pregnancy, old age, and many more. A collection of over 50 articles published from 1975 through 2007 and five newly commissioned articles, Transitions Theory covers developmental, situational, health and illness, organizational, and therapeutic transitions. Each section includes an introduction written by Dr. Meleis in which she offers her historical and practical perspective on transitions. Many of the articles consider the

transitional experiences of ethnically diverse patients, women, the elderly, and other minority populations. Key Topics Discussed: Situational transitions, including discharge and relocation transitions (hospital to home, stroke recovery) and immigration transitions (psychological adaptation and impact of migration on family health) Educational transitions, including professional transitions (from RN to BSN and student to professional) Health and illness transitions, including self-care post heart failure, living with chronic illness, living with early dementia, and accepting palliative care Organization transitions, including role transitions from acute care to collaborative practice, and hospital to community practice Nursing therapeutics models of transition, including role supplementation models and debriefing models

Essential Microeconomics

With climate change now a certainty, the question is how much change there will be and what can be done about it. One of the answers is through adaptation. Many of the lessons that are being learned in adaptation are from success stories from the field. This publication contains eleven case studies covering different ecosystems and regions around the world. Its aim is to summarize some current applications of the Ecosystem-Based Adaptation concept and its tools used around the world, and also draw lessons from experiences in conservation adaptation.

Institutions, Social Norms and Economic Development

Principles of Microeconomics 2e covers the scope and sequence of most introductory microeconomics courses. The text includes many current examples, which are handled in a politically equitable way. The outcome is a balanced approach to the theory and application of economics concepts. The second edition has been thoroughly revised to increase clarity, update data and current event impacts, and incorporate the feedback from many reviewers and adopters. The text and images in this book are grayscale. The first (previous) edition of Principles of Microeconomics via OpenStax is available via ISBN 9781680920093.

Biotherapy - History, Principles and Practice

The fifth edition of Romer's Advanced Macroeconomics continues its tradition as the standard text and the starting point for graduate macroeconomics courses and helps lay the groundwork for students to begin doing research in macroeconomics and monetary economics. Romer presents the major theories concerning the central questions of macroeconomics. The theoretical analysis is supplemented by examples of relevant empirical work, illustrating the ways that theories can be applied and tested. In areas ranging from economic growth and short-run fluctuations to the natural rate of unemployment and monetary policy, formal

models are used to present and analyze key ideas and issues. The book has been extensively revised to incorporate important new topics and new research, eliminate inessential material, and further improve the presentation.

Right Sourcing

Physics of Continuous Matter: Exotic and Everyday Phenomena in the Macroscopic World, Second Edition provides an introduction to the basic ideas of continuum physics and their application to a wealth of macroscopic phenomena. The text focuses on the many approximate methods that offer insight into the rich physics hidden in fundamental continuum mechanics equations. Like its acclaimed predecessor, this second edition introduces mathematical tools on a "need-to-know" basis. New to the Second Edition This edition includes three new chapters on elasticity of slender rods, energy, and entropy. It also offers more margin drawings and photographs and improved images of simulations. Along with reorganizing much of the material, the author has revised many of the physics arguments and mathematical presentations to improve clarity and consistency. The collection of problems at the end of each chapter has been expanded as well. These problems further develop the physical and mathematical concepts presented. With worked examples throughout, this book clearly illustrates both qualitative and quantitative physics reasoning. It emphasizes the importance in understanding the physical principles behind equations and the conditions

underlying approximations. A companion website provides a host of ancillary materials, including software programs, color figures, and additional problems.

Microeconomics, Solutions Manual

The Microeconomics of Insurance

Governments often use direct subsidies or tax credits to encourage investment and promote economic growth and other development objectives. Properly designed and implemented, these incentives can advance a wide range of policy objectives (increasing employment, promoting sustainability, and reducing inequality). Yet since design and implementation are complicated, incentives have been associated with rent-seeking and wasteful public spending. This collection illustrates the different types and uses of these initiatives worldwide and examines the institutional steps that extend their value. By combining economic analysis with development impacts, regulatory issues, and policy options, these essays show not only how to increase the mobility of capital so that cities, states, nations, and regions can better attract, direct, and retain investments but also how to craft policy and compromise to ensure incentives endure.

Building Resilience to Climate Change

This book shows administrators and teachers what they can do to make their students' ninth grade experience a successful one. Practical and research-based, this book showcases strategies to help you reduce your dropout rate, enhance student achievement, and provide a safe environment for your ninth grade students.

Microeconomic Theory

This book contains essays and revision notes for Microeconomics at the undergraduate level. This book includes the following topics: - Utility Curves; - Perfect Competition vs. Monopoly; - Oligopoly; - Collusion; - Monopolistic Competition; - Price Discrimination; - X-Efficiency; - Why do Firms Exist?; - Negative Externalities; - Positive Externalities; - Public Goods; - Adverse Selection; - General Equilibrium; - Efficiency Wages; - Minimum Wages and Unemployment.

Principles of Microeconomics 2e

Right Sourcing - Enabling Collaboration puts forward the proposal that the modern enterprise must fundamentally rethink its 'sourcing equation' to become or remain

viable. By presenting perspectives on sourcing from 21 different contributors, the editors hope to enable and inspire readers to make better-informed decisions. “Sourcing is a business theme which gets more and more attention. But making the right decisions is not easy. Sourcing is a wicked problem. This book provides valuable insights and concepts that will help to improve decisions with regard to sourcing. I would recommend this book to anyone who wants to achieve right sourcing.” Martin van den Berg Enterprise Architect, Co-Founder of DYA and author of several books, including “Dynamic Enterprise Architecture: How to Make It Work”. “Sourcing is becoming an increasingly complex task – one that requires fundamental changes in management thinking, radical new ways in which to communicate and deal with knowledge, and a totally new and different view of all the stakeholders. In this book leading thinkers in this space, do a great job in opening up the reader’s mind to possibilities for alternative solutions that integrate the human aspects in everything we do.” François Gossieaux Co-President Human 1.0 and author of “The Hyper-Social Organization” “What most impressed me about this book is the scope of it’s coverage, and the level of academic rigor behind the analysis. The broad scope makes this relevant to senior executives concerned with strategy, operational executives accountable for results, and technologist on the ground. The academic rigor gives me confidence that the findings and recommendations are sound. This book will be the reference guide for anyone seriously involved in strategic sourcing.” R. Lemuel Lasher Global Chief Innovation Officer, CSC “Thought provoking, occasionally frustrating and timely! As

the theory of the firm is “tested” with evolving technology and globalization driving down transaction costs and enabling greater connectivity we’re presented with many different possibilities for business operating models. By exploring the perspectives of organization, economics, technology and people this book provides the reader with a compendium of theory, ideas and practical tips on “Right Sourcing” the business of IT and enabling different business models. The slightly idiosyncratic nature of a book with contributions from different authors only serves to engage the reader in the discussion. I hope the editors find a way to continue this discussion beyond the book!” Adrian Apthorp Head of Enterprise Architecture, DHL Express Europe “The pursuit of sustainable development is one of the greatest challenges of our time. For this to succeed we must transform our current linear economy to a circular one. This calls for better coordination and collaboration between all players in product chains. Right-sourcing people, products and services is becoming an increasingly important topic therefore. This book provides the reader valuable insights and food for thought on right sourcing and collaboration.” Prof. Dr. H.H.F. Wijffels Utrecht Sustainability Institute (USI), University of Utrecht, The Netherlands

Physics of Continuous Matter, Second Edition

The Theory of the Firm

"PRICES AND OPTIMIZATION 1.1 SUPPORTING PRICES 1.2 SHADOW PRICES 1.3 THE ENVELOPE THEOREM 1.4 FOUNDATIONS OF CONSTRAINED OPTIMIZATION 1.5 APPLICATION: MONOPOLY PRICING WITH JOINT COSTS 1.1 SUPPORTING PRICES Key ideas: convex and non-convex production sets, price based incentives, Supporting Hyperplane Theorem Pursuit of self-interest is central to economics. Thus a deep understanding of the theory of maximization is essential to effective theorizing. In particular, the theory of constrained maximization is so crucial that we explore it in this first chapter. In contrast to a purely mathematical exposition, the emphasis here is on prices"--

Miller's Nursing for Wellness in Older Adults

Firms are a ubiquitous feature of the economic landscape, with much of the activity undertaken within an economy taking place within their boundaries. Given the size of the contribution made by firms to economic activity, employment and growth, having a theoretical understanding of the nature and structure of firms is crucial for understanding how an economy functions. The Theory of the Firm firstly offers a brief overview of the past, consisting of a concise discussion of the classical view of production, followed by an outline of the development of the

neoclassical - or 'textbook' - approach to firm level production. Secondly, the 'present' of the theory of the firm is discussed in three sections. The first section considers the post-1970 theory of the firm literature per se, while the second section scrutinises the relationship between the three most prominent of the modern sets of theories: the reference point, property rights and transaction cost approaches. The third section looks at the theory of privatisation. The unique aspects of this book includes its discussions of the post-1970 contributions to the theory of the firm; the integration of the theory of the entrepreneur with the theory of the firm; and the theory of privatisation. This volume offers an intuitive introduction to the theories of the firm as well as simple formal models of the most important contributions to the literature. It also outlines the historical evolution of the traditional and modern theories of the firm. This book is of great interest to those who study history of economic thought, industrial economics and organizational studies.

Digitalisation and Development

This book investigates the impact of information and communication technologies (ICTs) on development and well-being (beyond economic benefits) and highlights some emerging issues relating to the realities, constraints and digital divides with particular reference to India. It collects a series of novel contributions, studying the Indian experience in an international cross-country perspective. The book also

discusses economic, social, and behavioural aspects of well-being as well as access to ICTs across regions, states and individuals to account for the digital divide. The book establishes an aggregate relationship between ICT exposure and well-being at the country level and addresses a number of fundamental issues, such as whether ICT raises the level of transparency and governance. Based on case studies and anecdotal evidence, it then further assesses the effective implementation of service delivery through ICT innovations. The book is divided into four parts: The introductory part surveys the literature and presents background information on the Indian case; introduces the main themes on the relationships between ICT, socio-economic development and digital divides; and provides a summary and roadmap to the chapters of the book. Part II focuses on the impact of ICT on economic performance, including economic growth, productivity and trade. Part III examines the extent of the digital divides in India, including international, regional as well as inter-personal inequality. Finally, Part IV investigates the impact of ICT on governance, users' well-being and social outcomes. Combining insights from analyses of a variety of socio-economic dimensions related to digitalisation, this book is relevant for a wide range of scholars and researchers across disciplines, as well as practitioners and policy-makers. While the book has a main focus on India, various contributions take an international cross-country comparative perspective, and the results have general relevance for digitalisation and development. On the whole, the main message of this book is that the impact of ICTs is contingent upon other assets, capabilities

and institutional conditions. National policies should, therefore, not only promote digitalization as such but also ensure its co-evolution and complementarity with a variety of other country-specific factors. Chapter 'Digitalisation and Development: Issues for India and Beyond' of this book is available open access under a CC BY 4.0 license at link.springer.com

Improving School Climate

Taken from the first definitive introduction to behavioral economics, *The Foundations of Behavioral Economic Analysis: Other-Regarding Preferences* is an authoritative and cutting edge guide to this essential topic for advanced undergraduate and postgraduate students. It considers the evidence from experimental games on human sociality, and gives models and applications of inequity aversion, intention based reciprocity, conditional cooperation, human virtues, and social identity. This updated extract from Dhami's leading textbook allows the reader to pursue subsections of this vast and rapidly growing field and to tailor their reading to their specific interests in behavioural economics.

Advanced Macroeconomics

Biotherapy is defined as the use of living organisms in the treatment and diagnosis

of human and animal diseases. This volume is an evocative exploration of the history, scientific basis and practical use of the major biotherapy modalities. The authors provide researchers and practitioners interested in this field, with cutting-edge material on the latest key advances in the following fields of biotherapy: Maggot Therapy, Hirudotherapy, Bee Venom Therapy, Apitherapy, Ichthyotherapy, Helminth Therapy, Phage Therapy, Animal Assisted Therapy, Canine Olfactory Detection. In addition, the authors provide with their chapters an extensive bibliography that represents a state-of-the-art survey of the literature. Comprehensive and current, this fresh volume of reviews is an essential resource for professionals who need to stay ahead of the game in the exciting field of biotherapy.

Ten Days that Shook the World

Environmental professionals are often called upon to find solutions to environmental degradation problems or to lead the way in planning to prevent them. Because they come mainly from the environmental and science disciplines, most environmental professionals have limited training in the fundamentals of economics. This book is designed to provide those professionals not only with the basic principles of economics for foundational purposes but also the economic pros and cons to consider when making critical decisions on environmental issues. Economics for Environmental Professionals provides a fully explanatory,

quantitative, and practical introduction to a wide range of topics that make up the science of environmental economics. Moreover, it showcases the power of economic principles to explain and predict issues and current events impacting the environment. It discusses the economics relevant to the environmental mediums of air, water, and land and provides pertinent information on air toxics, hazardous wastes, and other related topics. It provides environmental professionals with the education not only to understand the nuts and bolts of economic analysis but also to conduct economic analyses. Throughout the book, the author joins economics and environmental practice with common-sense approaches and practical real-world examples. Designed to stimulate thought, the book explores strategies for maintaining a safe environment without excessive regulation and cost. With the information in this book, environmental professionals will have an understanding of the framework in which environmental problems exist, what they cost, how to pay for them, and what the payback is (if any).

Journal of Economic Literature

Microeconomics

"This book is a slice of intensified history—history as I saw it." So begins John

Reed's first-hand account of the Bolshevik Revolution of 1917. Much anticipated when it was published in 1919, Reed's narrative remains as riveting today as when the events he describes were still reverberating throughout the world. Reed was hardly a disinterested observer, and his involvement in the Communist labor movement lends urgency and passion to his classic account. He vividly describes events in Petrograd in November 1917, when Vladimir Lenin and the Bolsheviks stormed the Winter Palace and seized the reins of power. Despite Reed's personal leanings, which he made no attempt to hide, the book garnered praise from luminaries across the political spectrum. George F. Kennan, the American diplomat, and father of the policy of Soviet containment, said that "Reed's account of the events of that time rises above every other contemporary record for its literary power, its penetration, its command of detail. It will be remembered when all others are forgotten." Reed was committed to telling the story of the Russian revolution as truthfully as possible. That the book was banned by Russian premier Josef Stalin is a testament to the author's success in carrying out his mission. One hundred years after Russia and the world trembled, *Ten Days that Shook the World* brings alive the momentous events of 1917.

Marijuana Legalization

Solutions Manual, Microeconomic Theory

This second edition of Microeconomics is filled with learning-by-doing problems that give students a chance to make economics their own. These fully worked-out problems provide a step-by-step road map to help students solve numerical problems. Each problem correlates to similar practice problems at the end of each chapter. In addition, the authors include many extensive real-world examples in the text. These examples are contemporary applications of the theory and are longer and more extensive to show the evolution of the example. Each chapter opens with an example to draw readers into the topic.

Advanced Engineering Mathematics

Mankiw's "Macroeconomics" is widely adopted and known for communicating the principles of Macroeconomics in a concise and accessible way. This European edition maintains the core features that have made it a best-selling text, but introduces a European flavour. The changes help to make the book even more engaging for European students, and include: coverage of issues relevant to the European economy, such as the single European currency; use of European examples; new European cases.

The British National Bibliography

Improving School Climate provides evidence-based and practical strategies for cultivating a healthy school environment, while also avoiding behavior problems. The book is packed with strategies centered on key components and conditions for a positive school climate, such as positive teacher-student relationships, positive student-student relationships (including absence of bullying), supportive home-school relationships, student engagement, effective classroom management and school discipline, school safety, and student self-discipline. This text is an important inclusion for educators and school psychologists who prefer a structured, evidence-based, and practical approach for improving school climate, while also promoting students' academic achievements, preventing behavior problems, and fostering students' social and emotional competencies.

The Economic Studies

Health Employment and Economic Growth

The need to reduce food loss and waste is firmly embedded in the 2030 Agenda for Sustainable Development. Food loss and waste reduction is considered important

for improving food security and nutrition, promoting environmental sustainability and lowering production costs. However, efforts to reduce food loss and waste will only be effective if informed by a solid understanding of the problem. This report provides new estimates of the percentage of the world's food lost from production up to the retail level. The report also finds a vast diversity in existing estimates of losses, even for the same commodities and for the same stages in the supply chain. Clearly identifying and understanding critical loss points in specific supply chains – where considerable potential exists for reducing food losses – is crucial to deciding on appropriate measures. The report provides some guiding principles for interventions based on the objectives being pursued through food loss and waste reductions, be they in improved economic efficiency, food security and nutrition, or environmental sustainability.

Transitions Theory

Since Gary Becker's seminal article in the late sixties, the economic analysis of crime has blossomed, from an interesting side field within law and economics, into a mature stand-alone sub-discipline that has been embraced by many well-respected academic economists. Wide ranging and accessible, this is the most up-to-date textbook in this area, taking current economic research and making it accessible to undergraduates and other interested readers. Without use of graphs or mathematical equations, Winter combines theory and empirical evidence with

controversial examples from the news media. Topics discussed include: the death penalty, racial profiling, rational drug addiction and drug legalization, private crime deterrence, gun control, the privatization of prisons, juvenile crime, alternative social reforms to deter crime. By requiring no previous knowledge of economics, not only is this book a perfect choice for students new to the study of economics and public policy, it will also be of interest and accessible to students of criminology, law, political science, and other disciplines interested in the study of crime topics. By emphasizing the benefits and costs of social policy to deter crime, *The Economics of Crime* can be enjoyed by anyone who follows current public policy debate over one of society's most contentious issues.

Considering Marijuana Legalization

Provides a rigorous treatment of some of the basic tools of economic modeling and reasoning, along with an assessment of the strengths and weaknesses of these tools.

Microeconomics for Managers, 2nd Edition

A thoroughly revised new edition of a leading textbook that equips MBA students with the powerful tools of economics. This is a thoroughly revised and substantially

streamlined new edition of a leading textbook that shows MBA students how understanding economics can help them make smarter and better-informed real-world management decisions. David Kreps, one of the world's most influential economists, has developed and refined *Microeconomics for Managers* over decades of teaching at Stanford's Graduate School of Business. Stressing game theory and strategic thinking and driven by in-depth, integrated case studies, the book shows future managers how economics can provide practical answers to critical business problems. Focuses on case studies and real companies, such as Amazon, Microsoft, General Motors, United Airlines, and Xerox Covers essential topics for future managers—including price discrimination, Porter's five forces, risk sharing and spreading, signaling and screening, credibility and reputation, and economics and organizational behavior Features an online supplement (available at micro4managers.stanford.edu) for students that provides solutions to the problems in the book, longer caselike exercises, review problems, a calculus review, and more

The Economics of Crime

The text has been divided in two volumes: Volume I (Ch. 1-13) & Volume II (Ch. 14-22). In addition to the review material and some basic topics as discussed in the opening chapter, the main text in Volume I covers topics on infinite series, differential and integral calculus, matrices, vector calculus, ordinary differential

equations, special functions and Laplace transforms. Volume II covers topics on complex analysis, Fourier analysis, partial differential equations and statistics. The present book has numerous distinguishing features over the already existing books on the same topic. The chapters have been planned to create interest among the readers to study and apply the mathematical tools. The subject has been presented in a very lucid and precise manner with a wide variety of examples and exercises, which would eventually help the reader for hassle free study.

Macroeconomics

Over the next decade, the United States is likely to face a flood of debate and state referendums proposing the legalization of marijuana production and use. Marijuana Legalization will provide readers with a non-partisan primer about the topic, covering everything from the medical definition and benefits and negative consequences of using marijuana, to current laws around the drug, the likely consequences of legalization at the state and national levels, and ideas about the way that marijuana could be produced and regulated.

Fundamentals of Power System Economics

Review of previous edition: "An extremely popular and valuable resource to

students, practitioners and managers in community health care nursing. "Journal of Advanced Nursing Community Health Care Nursing has become established as an essential source of reference for all those working in the primary care and community health care domain. The Fourth Edition of this successful text focuses on new emergent agendas which affect primary care and public health education and service delivery/improvement. Comprehensive and accessible, this well established text draws on a wide range of subject experts all aiming for excellence in service delivery, to produce a resource that addresses the key aspects of community health delivery reflecting the reality of the new community/primary care agenda in the United Kingdom. Integrated throughout the book are themes relevant to contemporary community health care nursing, including Self Managed Care/Managed Care Pathways, Long Term Conditions, Palliative care and End of Life Care, Urgent and Unscheduled Care, Offender Care, and Continuing/Intermediate Care. The result is a book which focuses on new opportunities for contemporary practice, service delivery/improvement and education response within the context of the modernised primary and public healthcare service

Key features: New edition of a well-established and successful text
Written by experts in the field
Examines competencies in practice
Includes evidence-based guidelines and integrates national service framework requirements
Includes new chapters on Advanced Nursing Practice and competence assessment, modernised primary healthcare workforce and workforce change, Commissioning, and user and public engagement

Microeconomic Foundations I

The Foundations of Behavioral Economic Analysis

Powerful demographic and economic forces are shaping health workforce needs and demands worldwide. Effectively addressing growing population need and economic demand for health workers stands as one of our foremost global challenges. It also represents an opportunity to secure a future that is healthy, peaceful and prosperous. The contents of this book give direction and detail to a richer and more holistic understanding of the health workforce through the presentation of new evidence and solutions focused analysis. It sets out, under one cover, a series of research studies and papers that were commissioned to provide evidence for the High-Level Commission on Health Employment and Economic Growth. The 17 chapters in this book are grouped into four parts: - Health workforce dynamics - Economic value and investment - Education and production - Addressing inefficiencies.

Community Health Care Nursing

The Microeconomics of Insurance presents the core elements of the microeconomic

analysis of insurance markets. The aim of this analysis is to understand how insurance markets work, their fundamental economic functions, and how efficiently insurance markets perform. Topics include the variables influencing the demand for insurance, the supply of insurance, premium setting, regulation of insurance markets, adverse selection and moral hazard. It is presented in a straightforward manner such that it is accessible to senior undergraduate and graduate economics students, insurance professionals, and researchers.

Land Rights and Expropriation in Ethiopia

Using real-world examples and modern theories to analyse actual markets, this book offers a practical perspective on microeconomic theory and how it is used to resolve problems and analyse policy issues.

Microeconomics - Undergraduate Essays and Revision Notes

This thesis provides a new approach to the Ethiopian Land Law debate. The basic argument made in this thesis is that even if the Ethiopian Constitution provides and guarantees common ownership of land (together with the state) to the people, this right has not been fully realized whether in terms of land accessibility, enjoyability, and payment of fair compensation in the event of expropriation.

Expropriation is an inherent power of the state to acquire land for public purpose activities. It is an important development tool in a country such as Ethiopia where expropriation remains the only method to acquire land. Furthermore, the two preconditions of payment of fair compensation and existence of public purpose justifications are not strictly followed in Ethiopia. The state remains the sole beneficiary of the process by capturing the full profit of land value, while paying inadequate compensation to those who cede their land by expropriation. Secondly, the broader public purpose power of the state in expropriating the land for unlimited activities puts the property owners under imminent risk of expropriation.
