Applied Cyberpsychology

In the late 20th and 21st centuries, the meteoric rise of countless social media platforms and mobile applications have illuminated the profound need friendship and connection have in all of our lives; and yet, very few scholarly volumes have focused on this unique and important bond during this new era of relating to one another. Exploring such topics as friendship and social media, friendship with current and past romantic partners, co-workers, mentors, and even pets, editors Mahzad Hojjat and Anne Moyer lead an expert group of global contributors as they each explore how friendship factors within our lives today. What does it mean to be a friend? What roles do friendships play in our own development? How do we befriend those across the race, ethnicity, gender, and orientation spectrums? What happens when a friendship turns sour? What is the effect of friendship - good and bad - on our mental health? Providing a much needed update to the field of interpersonal relations, *The Psychology of Friendship* serves as a field guide for readers as they shed traditional definitions of friendship in favor of contemporary contexts and connections.

Theoretical and Practical Advances in Computer-based Educational Measurement

Stress and Epigenetics in Suicide discusses the central role of epigenetic modifications in suicidal behavior. As early-life stress and an individual's ability to cope with such stressors, combined with psychological factors, social factors, and existential and cognitive factors can predispose young people to suicidal behavior and put them at added risk of suicidal behavior later in life, this book provides readers with an overview of the neurobiology of stress, an introduction to the epigenetic changes induced by stress, and an understanding of how vulnerability and resilience to stress are built. It integrates these mechanisms into a biobehavioral model of suicide based on epigenetic marks, gene-environment

interactions, and other stressors. More importantly, it provides future direction for research and discusses potential interventions. This book is an ideal and trusted resource for researchers and clinicians who are interested in learning how the environment can affect behavior through genetics, and for those seeking the development of new methods for suicide prevention. Explores the neurobiology of stress and stress-related epigenetics, including discussion of the role of stress-induced epigenetic changes in behavioral, emotional, and cognitive mechanisms and whether these epigenetic marks are transgenerational Provides compelling biobehavioral models of suicide based on genetics, epigenetics, and behavioral adjustment Integrates social, psychological, and existential influences, giving readers a better understanding of the interdisciplinary nature of suicide risk factors Presents future directions for suicide-prevention strategies that incorporate recent research on genomics and stress resilience

Individual Differences and Personality

Life Safari

Bringing together prominent scholars, this authoritative volume considers the development of personality at multiple levels--from the neuroscience of dispositional traits to the cultural shaping of life stories. Illustrated with case studies and concrete examples, the Handbook integrates areas of research that have often remained disparate. It offers a lifespan perspective on the many factors that influence each individual's psychological makeup and examines the interface of personality development with health, psychopathology, relationships, and the family. Contributors provide broad-based, up-to-date reviews of theories, empirical findings, methodological innovations, and emerging trends. See also the authored volume *The Art and Science of Personality Development*, by Dan P. McAdams.

Handbook of Personality Development

Studie over het belang van ouders, school, vrienden en buurt voor de gedragsontwikkeling van jongeren en kinderen.

The Entrepreneurial Personality

De big 5 persoonlijkheidsfactoren

Is there such a thing as an 'entrepreneurial personality'? What makes someone an entrepreneur is a question that has intrigued the lay person and the scholar for many years, but can such a personality be identified or is it simply a socially constructed phenomenon? Elizabeth Chell pursues an alternative line of argument: to show that the entrepreneurial personality is, on the one hand, socially constructed, but on the other hand, presents consistency in behaviours, skills and competencies. This second edition of the highly acclaimed *The Entrepreneurial Personality* revisits the topic and updates the evidence from a multi-disciplinary perspective. The book carefully weaves together the arguments and views from

economists, sociologists and psychologists in order to develop a strong conceptual foundation. It discusses the inferences that these experts have made about the nature of entrepreneurs and the entrepreneurial process, and explores whether such evidence has enabled psychometricians to develop robust instruments for assessing the characteristics of entrepreneurs. The evidence for a range of purported traits is reviewed and the models and research designs of interested social scientists are explained and evaluated. Throughout, Chell laces her argument richly with a set of cases derived from primary and secondary sources. This book presents a timely set of views on the entrepreneurial personality, and will be of great interest to academics in the fields of entrepreneurship, economics, management, applied psychology and sociology. This accessible text will also appeal to the interested general reader, as well as practitioners and consultants dealing with entrepreneurs in the field.

APA Handbook of Personality and Social Psychology

Sibling Interaction Across Cultures

The Behavioral Addictions provides a pragmatic and engaging guide to help clinicians understand and contextualize conditions that may not be clearly delineated in the DSM-5 diagnostic system. Although not accorded a specific classification, the behaviors addressed in this book share the accepted hallmarks of addiction—continued engagement in an action despite negative consequences and loss of control over one’s own life. The editors begin with an overview of the behavioral addictions from neurobiological, theoretical, clinical, and forensic perspectives and then present 12 case studies focused on a variety of behaviors, from exercising to Internet gaming and from kleptomania to tanning. These real-life case studies are both fascinating and instructive, and along with accompanying videos, they help trainees and practicing clinicians alike to digest current research and gain “hands-on” experience with the diagnosis and treatment of these conditions. In the realm of behavioral addictions, there is much work to be done: figuring out reliable diagnostic criteria, building useful assessment tools, and developing effective psychosocial and pharmacological treatments, to name a few critical tasks. The Behavioral Addictions is an indispensable, case-based resource to guide clinicians in this rapidly changing field.

The Wiley-Blackwell Handbook of Individual Differences

Individual Differences and Personality, Third Edition provides a comprehensive overview of research on personality. The book begins with the main approaches to the study of personality, basic principles of personality measurement, the concept of personality traits, and the major dimensions of personality variation. Further chapters review personality change and stability, biological causal mechanisms, genetic and environmental influences and evolutionary adaptive function. Personality disorders are examined as are life outcomes—such as relationships, work, health, and others—that are predicted by personality characteristics. The book additionally examines important individual differences, such as mental abilities, vocational interests, religious beliefs, political attitudes and sexuality. The

third edition is updated with new findings on age-related differences in personality, on sexual orientation and personality, on socially desirable responding in personality assessment, and on the biological and social origins of mental ability differences. Treatments of several topics have been streamlined, including reliability and validity, developmental change, genetic and environmental influences and the structure of mental abilities. Organized by issues in personality research rather than by theorists Identifies main traits in personality and explains personality assessment Examines the impact of personality on life outcomes Explores developmental, genetic and evolutionary aspects of personality Includes other psychological characteristics (abilities, interests, beliefs and attitudes)

The Big Five for Life

The Causes and Effects of Smoking

Providing a practical, thorough understanding of how factor analysis works, Foundations of Factor Analysis, Second Edition discusses the assumptions underlying the equations and procedures of this method. It also explains the options in commercial computer programs for performing factor analysis and structural equation modeling. This long-awaited e

Youth 2.0: Social Media and Adolescence

Makes a major contribution to current research on children by providing a broad view of up-to-date, authoritative material in many different areas. Contributors have selected and interpreted the relevant material in reference to the practitioner's interests and needs. The chapters, written by prominent specialists, cover various topics in child development from early periods of socialization to the development of higher mental processes, and include two chapters dealing with genetic and neurophysiological bases of behavior.

Klikt 't of klikt 't niet

This edited work presents a collection of papers on motivation research in education around the globe. Pursuing a uniquely international approach, it also features selected research studies conducted in Singapore under the auspices of the Motivation in Educational Research Lab, National Institute of Education, Singapore. A total of 15 chapters include some of the latest findings on theory and practical applications alike, prepared by internationally respected researchers in the field of motivation research in education. Each author provides his/her perspective and practical strategies on how to maximize motivation in the classroom. Individual chapters focus on theoretical and practical considerations, parental involvement, teachers' motivation, ways to create a self-motivating classroom, use of ICT, and nurturing a passion for learning. The book will appeal to several different audiences: firstly, policymakers in education, school leaders and teachers will find it a valuable resource. Secondly, it offers a helpful guide for researchers and teacher educators in pre-service and postgraduate teacher education programmes. And thirdly, parents who want to help their children pursue

lifelong learning will benefit from reading this book.

The H Factor of Personality

The “H” in the H factor stands for “Honesty-Humility,” one of the six basic dimensions of the human personality. People who have high levels of H are sincere and modest; people who have low levels are deceitful and pretentious. It isn’t intuitively obvious that traits of honesty and humility go hand in hand, and until very recently the H factor hadn’t been recognized as a basic dimension of personality. But scientific evidence shows that traits of honesty and humility form a unified group of personality traits, separate from those of the other five groups identified several decades ago. This book, written by the discoverers of the H factor, explores the scientific findings that show the importance of this personality dimension in various aspects of people’s lives: their approaches to money, power, and sex; their inclination to commit crimes or obey the law; their attitudes about society, politics, and religion; and their choice of friends and spouse. Finally, the book provides ways of identifying people who are low in the H factor, as well as advice on how to raise one’s own level of H.

Kijk op de Nederlandse jeugd

This study appears at a time when a decisive turn is due in the research on personality development. After many years of stagnation and misguided research in this field, this book should lead to a thorough revision and a better understanding of current views on the factors which have an influence on personality. Let us consider the unsatisfactory aspects of the recent developments in personality studies. At the beginning of this century, the revolutionary insight gained ground that personality is susceptible to various influences, in particular to those resulting from human interaction. This insight swept away many of the old scholastic concepts and gained special importance in the fields of pedagogics and psychotherapy. However, in the wake of every great discovery we find inherent dangers. For years, various claims and creeds on the malleability of personality have been put forward as if they were proven facts. Lay literature, too, was permeated with wrong and distorted information on factors which might endanger child development.

Review of Child Development Research

Wat gebeurt er als je iemand ontmoet? Is er respect en vertrouwen, of zelfs meer? Klikt het? Als we door de ogen van een scheikundige naar (liefdes)relaties kijken, blijkt het hart minder belangrijk, en bepaalt het verstand ook niet alles veel wordt bepaald door hormonen, neurotransmitters en andere chemische verbindingen. In korte, trefzekere stukjes over onder meer verlangen, het knuffelhormoon, muziek en emoties legt de auteur uit hoe dat werkt. Dr. Henk van 't Klooster is chemicus, studeerde daarnaast psychologie en houdt zich nu bezig met sociale chemie. Hij is coach en adviseur van leidinggevenden. www.vithaka.nl

The Behavioral Addictions

As legions of businesses scramble to set up virtual-shop, we face an unprecedented level of competition to win over and keep new customers online. At the forefront of this battleground is your ability to connect with your customers, nurture your relationships and understand the psychology behind what makes them click. In this book *The Web Psychologist*, Nathalie Nahai, expertly draws from the worlds of psychology, neuroscience and behavioural economics to bring you the latest developments, cutting edge techniques and fascinating insights that will lead to online success. *Webs of Influence* delivers the tools you need to develop a compelling, influential and profitable online strategy which will catapult your business to the next level - with dazzling results.

Birth Order

Studies in Machiavellianism covers the various aspects of Machiavellian personality and characteristics. Traditionally, the "Machiavellian" is someone who views and manipulates others for his own purposes. This 17-chapter text discusses the empirical findings on approved canons of social psychological reporting concerning Machiavellianism. The introductory chapters examine the relationships between Machiavellianism and measures of ability, opinion, and personality, as well as the visual interaction in relation to Machiavellianism and an unethical act. The succeeding chapters discuss the results and implications of the Machiavel study, with a particular emphasis on the measure of success of attempts to manipulate others. Other chapters deal with the results of the Con and Ten Dollar Games along with their interpretation. The remaining chapters discuss the laboratory and field research studies of Machiavellianism, as well as its social correlation. This book will prove useful to social psychologist, behaviorists, historians, and researchers.

Assessment doen

Summarises the current state of knowledge on major topics within the fields of personality and social psychology. Coverage is contemporary, from social cognition, to emotional experience, from religious beliefs to interpersonal relations. The chapters reflect a wide range of theoretical perspectives at different levels of analysis, including perspectives from disciplines outside of psychology.

The Big Five Personality Factors

The Wiley-Blackwell Handbook of Individual Differences provides a comprehensive, up-to-date overview of recent research, current perspectives, practical applications, and likely future developments in individual differences. Brings together the work of the top global researchers within the area of individual differences, including Philip L. Ackerman, Ian J. Deary, Ed Diener, Robert Hogan, Deniz S. Ones and Dean Keith Simonton Covers methodological, theoretical and paradigm changes in the area of individual differences Individual chapters cover core areas of individual differences including personality and intelligence, biological causes of individual differences, and creativity and emotional intelligence

Het belang van school, ouders, vrienden en buurt

This open access book presents a large number of innovations in the world of operational testing. It brings together different but related areas and provides insight in their possibilities, their advantages and drawbacks. The book not only addresses improvements in the quality of educational measurement, innovations in (inter)national large scale assessments, but also several advances in psychometrics and improvements in computerized adaptive testing, and it also offers examples on the impact of new technology in assessment. Due to its nature, the book will appeal to a broad audience within the educational measurement community. It contributes to both theoretical knowledge and also pays attention to practical implementation of innovations in testing technology.

Personality Dimensions and Arousal

Zuckerman received his Ph.D. in psychology from New York University, Graduate School of Arts and Science in 1954 with a specialization in clinical psychology. After graduation, he worked for three years as a clinical psychologist in state hospitals in Norwich, Connecticut and Indianapolis, Indiana. While in the latter position the Institute for Psychiatric Research was opened in the same medical center where he was working as a clinical psychologist. He obtained a position there with a joint appointment in the department of psychiatry. This was his first interdisciplinary experience with other researchers in psychiatry, biochemistry, psychopharmacology, and psychology. His first research areas were personality assessment and the relation between parental attitudes and psychopathology. During this time, he developed the first real trait-state test for affects, starting with the Affect Adjective Check List for anxiety and then broadening it to a three-factor trait-state test including anxiety, depression, and hostility (Multiple Affect Adjective Check List). Later, positive affect scales were added. Toward the end of his years at the institute, the first reports of the effects of sensory deprivation appeared and he began his own experiments in this field. These experiments, supported by grants from NIMH, occupied him for the next 10 years during his time at Brooklyn College, Adelphi University, and the research labs at Albert Einstein Medical Center in Philadelphia. This last job was his second interdisciplinary experience working in close collaboration with Harold Persky who added measures of hormonal changes to the sensory deprivation experiments. He collaborated with Persky in studies of hormonal changes during experimentally (hypnotically) induced emotions. During his time at Einstein, he established relationships with other principal investigators in the area of sensory deprivation and they collaborated on the book *Sensory Deprivation: 15 years of research* edited by John Zubek (1969). His chapter on theoretical constructs contained the idea of using individual differences in optimal levels of stimulation and arousal as an explanation for some of the variations in response to sensory deprivation. The first sensation seeking scale (SSS) had been developed in the early 1960's based on these constructs. At the time of his move to the University of Delaware in 1969, he turned his full attention to the SSS as the operational measure of the optimal level constructs. This was the time of the drug and sexual revolutions on and off campuses and research relating experience in these areas to the basic trait paid off and is continuing to this day in many laboratories. Two books have been written on this topic: *Sensation Seeking: Beyond the Optimal Level of Arousal*, 1979; *Behavioral Expressions and Biosocial Bases of Sensation Seeking*, 1994. Research on sensation seeking in America and countries around the world continues at an unabated level of journal articles,

several hundred appearing since the 1994 book on the subject.

Foundations of Factor Analysis

A “stimulating and thought-provoking” guide to help you make productive and autonomous choices toward rewriting your life (Los Angeles Times). We choose a “life script” at an early age. But you can change its course. Whether born into wealth or poverty, into nurturing families or damaged abusers, fostered by strict parents or careless and undisciplined ones, each individual still has a spiritual core that exists independent of the environment and is equally crucial to his or her destiny. Countering the fundamental principle of psychiatry which asserts that emotional and mental distress comes from within, Claude Steiner believes that people are innately healthy but develop a pattern early in life based upon negative or positive influences of those around them. Those influences can rule every detail of our lives until our death. Thus children decide, however unconsciously, whether they will be happy or depressed, winners or failures, strong or dependent, caring or cruel, and having decided, they spend the rest of their lives making that decision come true. For those who choose to live by their negative script, the consequences can be disastrous unless they make a conscious decision to change. In *Scripts We Live*, Steiner tackles the puzzle of human fate. He reveals what determines our life scripts, and how each person’s combination of spirit and circumstance contributes to the final path that life takes. And he offers hopeful advice and practical analysis so that we all can rewrite for ourselves more meaningful and fulfilling lives.

Internet Addiction

Cyberpsychology is an emerging area of psychological study that aims to understand and explain all facets of online behaviour. This book brings together overviews from a number of leading authorities in the field, to suggest how academic theory and research can be applied to a variety of online behaviours. Both positive and negative behaviours are considered, including topics as diverse as parenting the online child, age-related internet usage and cultural considerations in online interactions. Psychological research can no longer view online and offline worlds as different entities, but must consider online behaviours as equally distinct as offline activities. This is especially apparent when looking at online dating, the role that social networks play in organisations and online consumer behaviours, and in a consideration of the role that psychological research plays in underpinning the multi-billion pound gaming industry. Focusing on these personal applications of the Internet, insight is also offered into the role that theory and research plays in training military personnel as well as the use of psychometric testing to select and retain employees.

Adolescent Self-disclosure

This book examines how you can identify, assess, and treat Internet addiction in the most effective manner. Internet use has become an integral part of our daily lives, but at what point does Internet use become problematic? What are the different kinds of Internet addiction? And how can professionals best help clients? Internet addiction refers to a range of behavioral problems, including social media

addiction and Internet gaming disorder. This compact, evidence-based guide written by leading experts from the field helps disentangle the debates and controversies around Internet addiction and outlines the current assessment and treatment methods. The book presents a 12–15 session treatment plan for Internet and gaming addiction using the method and setting with the best evidence: group CBT. Printable tools in the appendix help clinicians implement therapy. This accessible book is essential reading for clinical psychologists, psychiatrists, psychotherapists, counsellors, social workers, teachers, as well as students.

Parents and Peers in Social Development

How do infants and young children coordinate information in real time to arrive at sentence meaning from the words and structure of the sentence and from the nonlinguistic context? This volume introduces readers to an emerging field of research, experimental developmental psycholinguistics, and to the four predominant methodologies used to study on-line language processing in children. Authored by key figures in psycholinguistics, neuroscience and developmental psychology, the chapters cover event-related brain potentials, free-viewing eyetracking, looking-while-listening, and reaction-time techniques, also providing a historical backdrop for this line of research. Multiple aspects of experimental design, data collection and data analysis are addressed in detail, alongside surveys of recent important findings about how infants and children process sounds, words, and sentences. Indispensable for students and researchers working in the areas of language acquisition, developmental psychology and developmental neuroscience of language, this volume will also appeal to speech language pathologists and early childhood educators.

Sibling Development

Assessment doen: de beste voorbereiding op assessment-rollenspel, persoonlijkheidstest en iq-test Help, ik moet een assessment doen! Veel mensen zien op tegen een assessment of psychologisch onderzoek. Niet helemaal onlogisch, want er hangt vaak veel van af. Maar met een goede voorbereiding hoeft niemand bang te zijn. Het assessment kent tal van varianten, zoals selectie-, ontwikkelings-, loopbaan- en e-assessments. Voorbereiden heeft zin voor alle typen! In dit boek kun je de iq-test en het assessment-rollenspel oefenen, en lees je alles over het psychologisch onderzoek en de persoonlijkheidstest. Bas Kok (red.) en Ferry de Jongh nemen al sinds 1990 assessments af. Met deze ervaring kunnen zij als geen ander advies geven over de ideale voorbereiding op assessments en psychologische tests.

On the Psychobiology of Personality

This book describes the origin, history, rationale, procedures, developments, models and practical applications of the so-called Big Five traits, providing a concise but thorough insight into the Big Five model of personality and its emergence from the lexical trait approach to personality structure. Written by one of the world's leading experts in this field, this integrated text includes a critical description of the theory that provides readers with all the necessary background

information. The text is of interest to specialists in the field of personality and to applied psychologists.

Developmental Psycholinguistics

Talent Management is one of the fastest growing themes in the management field, yet, there is little knowledge about the nature of TM in practice, and how TM evolves over time. This book offers an integrated framework, based on empirical research that addresses the nature and dynamics of TM in organizations.

Webs of Influence

Like a thumbprint, personality type provides an instant snapshot of a person's uniqueness. Drawing on concepts originated by Carl Jung, this book distinguishes four categories of personality styles and shows how these qualities determine the way you perceive the world and come to conclusions about what you've seen. It then explains what they mean for your success in school, at a job, in a career and in your personal relationships. For more than 60 years, the Myers-Briggs Type Indicator (MBTI) tool has been the most widely used instrument in the world for determining personality type, and for more than 25 years, Gifts Differing has been the preeminent source for understanding it.

Gifts Differing

Most studies of social development in children have relied on the assumption that adults' instructions to children pass on knowledge of the rules of behavior which govern and preserve society. In this volume, James Youniss argues that the child's relations with his or her friends and peers make a distinctive and critically important contribution to social development. While the child's relations with parents and other adults provide a sense of order and authority, peer relations are a source of sensitivity, self-understanding, and interpersonal cooperation. Following a discussion of the views of Harry Stack Sullivan and Jean Piaget, whose theories are synthesized in Youniss's perspective, Youniss presents a wealth of empirical data from studies in which children describe their own views of their two social worlds.

The Psychology of Friendship

Waarom wil de één een flitsende carrière en houdt de ander zijn hele leven dezelfde baan? Waarom kunnen sommige mensen niets weggoien en hebben anderen een leeg huis? Waarom staat de een altijd voor een ander klaar, terwijl de ander slechts profiteert en er nog mee wekomt ook? Menselijk gedrag komt tot stand door een samenloop van persoonlijkheid en toevallige omstandigheden. Jolet Plomp legt uit wat persoonlijkheid is. Zij vertelt in hoeverre karaktereigenschappen veranderbaar zijn en of het wel slim is om die te willen veranderen. Voor de introverte mens heeft zij een apart hoofdstuk ingeruimd, want die verdient meer respect dan hij meestal krijgt in de extraverte westerse cultuur van dit moment. Met dit boek kunt u uw eigen persoonlijkheid in kaart brengen. U ontdekt wat de invloed is van uw persoonlijkheid en die van de mensen om u heen, in de liefde, op

het werk en thuis. Ook leert u welke rol uw zelfbeeld speelt. Met de praktische tips zult u beter kunnen omgaan met het karakter van anderen. Joliet Plomp schreef eerder over stress, beslissen, loslaten en werkplezier. Zij heeft een praktijk voor arbeidspsychologie. In Psychologie Magazine beantwoordt zij persoonlijke vragen van lezers.

Een kwestie van persoonlijkheid

How might an adolescent be facilitated to self-disclose in a counseling interview? This research undertook the task of studying this rather neglected area in the literature on adolescents, psycho-therapy, and self-disclosure. Adolescents, and in particular those with learning difficulties and/or behavior problems, are in need of methods to facilitate self-expression. The major purpose of this research was to verify the efficacy of three factors facilitating self-divulgence: psychotherapeutic techniques, individual and group conditions, and themes. The findings responded to how adolescents may be facilitated to self-disclose.

Stress and Epigenetics in Suicide

Thomas Derale, a mild-mannered businessman from Chicago, embodies leadership's greatest secret: his companies make fortunes, his people love him, and his customers are willing to wait weeks just to do business with him. At age 55, though, Derale is dying, and through a series of final encounters with key people in his life - primarily his wife, Maggie, and Joe, who regards Thomas as his mentor - we learn about his life, his unique business insights, and the true impact the man and his work has had on the people around him. A business parable with a difference, THE BIG FIVE FOR LIFE is a story of great leadership, savvy decision-making and is a powerful reminder that successful leaders are not just in the business of business - they are in the business of life.

Studies in Machiavellianism

Sibling Interaction Across Cultures is a collection of studies focusing on the role siblings play in the social, emotional, and cognitive development of their younger siblings. Unlike much previous research on sibling relationships, these studies share the underlying assumption that social interaction plays a significant role in the acquisition and transmission of cultural knowledge and social understanding. The contributors evaluate the advantages as well as limitations of current methodological issues directly affecting sibling research and assess the various theoretical perspectives underpinning these methodologies. Drawing from empirical, cross- and infra-cultural research, this volume lays new groundwork for identifying universal, environmental, and culture-specific aspects of the role of siblings in child development.

Building Autonomous Learners

Dé jeugd bestaat niet. Evenmin als dé Nederlander, dé Fries of dé Amsterdammer, ook al wonen en leven zij in eenzelfde gebied. Toch valt er veel te zeggen over de jeugd in het algemeen. Dit boek geeft systematisch aan hoe jeugdigen zich

gedragen en functioneren op verschillende terreinen – school, thuis en vrije tijd – en hoe zij omgaan met de uitdagingen en risico's die nieuwe technologische ontwikkelingen – smartphone, internet, games – meebrengen. Dat leidt tot een genuanceerde typering van de jeugd van vandaag. Daarmee geeft dit boek een reële kijk op de Nederlandse jeugd.

Talent Management in Practice

Jack, a young man trying to find happiness in life, follows his heart to Africa, where he meets a wise old woman called Ma Ma Gombe. They join together on a journey to seek a destination known as the "Birthplace of All," a journey that changes Jack forever.

Zuid-Afrika

"I heartily recommend Sibling Development."--CFLE Network Newsletter (National Council on Family Relations) Sibling relationships have a major influence on a person's development and behavior, yet, until now the topic has been seriously underrepresented in the professional literature. *Sibling Development: Implications for Mental Health Practitioners* addresses this gap by examining the range of developmental, clinical, and cultural issues related to sibling relationships. It highlights positive sibling relationships as a source of strength and resilience; at the other end of the spectrum, it addresses sibling abuse, a dangerous and underdiagnosed condition. It demonstrates the crucial support that siblings can provide each other in families experiencing mental illness, substance abuse, divorce, and other stressors. It also considers issues of cultural and ethnic diversity, gender, disability, and sexual orientation as they relate to siblings and their families. Each chapter provides case studies to illustrate how theory and empirical findings can be incorporated into culturally informed treatment, and offers implications for practice and future research. It is an essential resource for all practitioners, researchers, students, and educators who work with or study siblings. Key Features: Examines the role of siblings as cultural educators and socializing agents Offers empirically derived treatment approaches for siblings and families Discusses lesbian, gay, bisexual, and transgender siblings Includes case studies to demonstrate how to integrate theory and empirical findings into practice Looks at sibling dynamics in families with mental illness, substance abuse, and divorce, as well as siblings of individuals with disabilities Discusses sibling relationships in transracial adoptive families

Scripts People Live

This book grasps the duality between opportunities and risks which arise from children's and adolescents' social media use. It investigates the following main themes, from a multidisciplinary perspective: identity, privacy, risks and empowerment. Social media have become an integral part of young people's lives. While social media offer adolescents opportunities for identity and relational development, adolescents might also be confronted with some threats. The first part of this book deals with how young people use social media to express their developing identity. The second part revolves around the disclosure of personal

information on social network sites, and concentrates on the tension between online self-disclosure and privacy. The final part deepens specific online risks young people are confronted with and suggests solutions by describing how children and adolescents can be empowered to cope with online risks. By emphasizing these different, but intertwined topics, this book provides a unique overview of research resulting from different academic disciplines such as Communication Studies, Education, Psychology and Law. The outstanding researchers that contribute to the different chapters apply relevant theories, report on topical research, discuss practical solutions and reveal important emerging issues that could lead future research agendas.
