On April 11, 1931, Virginia Woolf ended her entry in *A Writer's Diary* with the words "too much and not the mood." She was describing how tired she was of correcting her own writing, of the "cramming in and the cutting out" to please other readers, wondering if she had anything at all that was truly worth saying. The character of that sentiment, the attitude of it, inspired Durga Chew-Bose to write and collect her own work. The result is a lyrical and piercingly insightful collection of essays and her own brand of essay-meets-prose poetry about identity and culture. Inspired by Maggie Nelson's *Bluets*, Lydia Davis's short prose, and Vivian Gornick's exploration of interior life, Chew-Bose captures the inner restlessness that keeps her always on the brink of creative expression. *Too Much and Not the Mood* is a beautiful and surprising exploration of what it means to be a first-generation, creative young woman working today.

Based on the popular Artech House classic, Digital Communication Systems Engineering with Software-Defined Radio, this book provides a practical approach to quickly learning the software-defined radio (SDR) concepts needed for work in the field. This up-to-date volume guides readers on how to quickly prototype wireless designs using SDR for real-world testing and experimentation. This book explores advanced wireless communication techniques such as OFDM, LTE, WLA, and hardware targeting. Readers will gain an understanding of the core concepts behind wireless hardware, such as the radio frequency front-end, analog-to-digital and digital-to-analog converters, as well as various processing technologies. Moreover, this volume includes chapters on timing estimation, matched filtering, frame synchronization message decoding, and source coding. The orthogonal frequency division multiplexing is explained and details about HDL code generation

This book addresses the use, operation and maintenance of new renewable energy systems, taking into account their integration in the current electrical markets and in the new emergent uses of energy. The book is based on practical experiences which present different perspectives about what occurs once an energy production plant based on sources of renewable energy is in production. Questions to be addressed include: how the energy produced is integrated into the current system of energy production, what is its consideration in the electrical market, what the impact is on society, how differential the strategies of operation and maintenance are with respect to conventional systems of energy production, etc.

For the past twenty-five years, North Point Press has been working with Edward Snow, "Rilke's best contemporary translator" (Brian Phillips, *The New Republic*), to bring into English Rilke's major poetic works. The *Poetry of Rilke*—the single most comprehensive volume of Rilke's German poetry ever to be published in English—is the culmination of this effort. With more than two hundred and fifty selected poems by Rilke, including complete translations of the *Sonnets to Orpheus* and the *Duino Elegies*, *The Poetry of Rilke* spans the arc of Rilke's work,

from the breakthrough poems of The Book of Hours to the visionary masterpieces written only weeks before his death. This landmark bilingual edition also contains all of Snow's commentaries on Rilke, as well as an important new introduction by the award-winning poet Adam Zagajewski. The Poetry of Rilke will stand as the authoritative single-volume translation of Rilke into English for years to come.

Responding to recent developments and a growing VLSI circuit manufacturing market, Technology Computer Aided Design: Simulation for VLSI MOSFET examines advanced MOSFET processes and devices through TCAD numerical simulations. The book provides a balanced summary of TCAD and MOSFET basic concepts, equations, physics, and new technologies related to TCAD and MOSFET. A firm grasp of these concepts allows for the design of better models, thus streamlining the design process, saving time and money. This book places emphasis on the

importance of modeling and simulations of VLSI MOS transistors and TCAD software. Providing background concepts involved in the TCAD simulation of MOSFET devices, it presents concepts in a simplified manner, frequently using comparisons to everyday-life experiences. The book then explains concepts in depth, with required mathematics and program code. This book also details the classical semiconductor physics for understanding the principle of operations for VLSI MOS transistors, illustrates recent developments in the area of MOSFET and other electronic devices, and analyzes the evolution of the role of modeling and simulation of MOSFET. It also provides exposure to the two most commercially popular TCAD simulation tools Silvaco and Sentaurus.

- Emphasizes the need for TCAD simulation to be included within VLSI design flow for nano-scale integrated circuits
- Introduces the advantages of TCAD simulations for device and process technology characterization
- Presents the fundamental physics and mathematics incorporated in the TCAD tools
- Includes popular commercial TCAD simulation tools (Silvaco and Sentaurus)
- Provides characterization of performances of VLSI MOSFETs through TCAD tools
- Offers familiarization to compact modeling for VLSI circuit simulation

R&D cost and time for electronic product development is drastically reduced by taking advantage of TCAD tools, making it indispensable for modern VLSI device technologies. They provide a means to characterize the MOS transistors and improve the VLSI circuit simulation procedure. The comprehensive information and systematic approach to design, characterization, fabrication, and computation of VLSI MOS transistor through TCAD tools presented in this book

A Year Without "Made in China" provides you with a thought-provoking and thoroughly entertaining account of how the most populous nation on Earth influences almost every aspect of our daily lives. Drawing on her years as an award-winning journalist, author Sara Bongiorni fills this book with engaging stories and anecdotes of her family's attempt to outrun China's reach—by boycotting Chinese made products—and does a remarkable job of taking a decidedly big-picture issue and breaking it down to a personal level.
