Housing Design for an Increasingly Older Population

Publisher description

Freestanding Houses

The Principles of Housing is an engaging and discursive introduction to the key topics within housing studies. Whereas many books get bogged down in country-specific policy or small innovations, this book argues that the fundamental concepts of what we call housing are relatively stable and unchangeable. By focusing on universal principles, the book provides an introduction to housing that can be used by students world-wide. The book consists of a series of short chapters relating to the key issues of housing, such as borrowing, choice, finance, government, need, reform and welfare. Each chapter is designed to be a starting point for a wider conversation, with discussion questions and a number of think pieces and international case studies to help students connect these general principles to their own surroundings. Written by renowned housing expert Peter King, The Principles of Housing succeeds in being accessible and engaging without shying away from the complexities of housing issues. The book will be invaluable to students on housing-related courses across

Where To Download Building Type Basics For Housing

finance, real estate, planning, development, politics and sociology subjects. The book would also be useful to housing professionals and policy makers aiming to expand their understanding of housing issues.

Mechanical and Electrical Equipment for Buildings

Publisher Description

Building Type Basics for Performing Arts Facilities

For Gwendolyn Wright, the houses of America are the diaries of the American people. They create a fascinating chronicle of the way we have lived, and a reflection of every political, economic, or social issue we have been concerned with. Why did plantation owners build uniform cabins for their slaves? Why were all the walls in nineteenth-century tenements painted white? Why did the parlor suddenly disappear from middle-class houses at the turn of the century? How did the federal highway system change the way millions of Americans raised their families? Building the Dream introduces the parade of people, policies, and ideologies that have shaped the course of our daily lives by shaping the rooms we have grown up in. In the row houses of colonial Philadelphia, the luxury apartments of New York City, the prefab houses of Levittown, and the public-housing towers of Chicago, Wright discovers revealing clues to our past and a new way of looking at such contemporary issues as integration, sustainable energy, the needs of the elderly, and how we define "family."

Building Type Basics for Recreational Facilities

The systematic development of building types is an important task in housing construction. A deeper understanding of the underlying building types is mandatory, both for individual designs and for the wider application and variation of tried-and-tested structures. The authors have developed an innovative, drawing-based approach for unfolding the potentials of several existing building types for the future of urban housing. The first part is dedicated to the courtyard house, in which the courtyard is used as a private outside living space. The second part deals with the popular form of the terraced house and discusses aspects of corner solutions or terraced developments as an urban design element. In the third part, the townhouse is discussed with view to variants such as single-story and apartment buildings, including aspects of privacy and public access, as well as living and working. Finally, the detached house type is considered in its potential to provide all-directional orientation of the living space. The array of solutions is presented consistently in floorplans and cross-sections drawn to scale. In a new introduction to this all-in-one compendium the authors discuss the implications of the typological approach for today's housing design.

Design for Assisted Living

From the acclaimed New York Firm of Kohn Pedersen Fox, this volume in the Building Type Basics series gives you the essential information you need to initiate designs for every type of office building, from dramatic skyscrapers to utilitarian low-rise complexes. Combines in-depth coverage of all of the structural, mechanical, acoustic, traffic, and security issues unique to today's office buildings with the nuts-and-bolts guidance you need to launch your design project and see it through. Addresses a broad scope of timely issues related to modern office design: standard and alternate workplaces, the "smart" office building, security, healthy interiors, elevators, image and identity, and more. Building Type Basics for Justice Facilities

Missing Middle Housing

Daniel Parolek, an architect and urban designer, illustrates the power of Missing Middle housing types--such as duplexes, fourplexes, and bungalow courts-- to meet today's diverse housing needs. With the benefit of beautiful full-color graphics, Parolek goes into depth about the benefits and qualities of Missing Middle Housing, explains why more developers should be building them, and defines the barriers cities need to remove to enable them to be built. Parolek proves that density is too blunt of an instrument to effectively regulate for twenty-first-century housing needs. Whether you are a planner, architect, builder, or city leader, Missing Middle Housing will help you think differently about how to address housing needs for today's communities.

Building Type Basics for College and University Facilities

This guideline defines ventilation and then natural ventilation. It explores the design requirements for natural ventilation in the context of infection control, describing the basic principles of design, construction, operation and maintenance for an effective natural ventilation system to control infection in health-care settings.

Natural Ventilation for Infection Control in Health-care Settings

Describes the guidelines which should be used in restoring old buildings, explains some of the complications in making repairs, and shows examples of older buildings serving new functions

Building Type Basics for Housing

This series provides architects and design professionals with the essential information they need to jump start the design of a variety of facilities. In each volume, series editor, Stephen Kliment, brings together high-profile, industry leaders who share their knowledge and expertise. Each book is organized around a unique series format, including a list of twenty fundamental questions routinely encountered in the early phases of the project commission. The volumes include numerous descriptive illustrations, featured project photographs, diagrams, floor plans, sections and details.

Project Management for Construction

Since the mid-1980s, and in particular the 1992 environmental summit in Rio de Janeiro, sustainability has become a global issue and the subject of international debate. In the context of architecture sustainability implies the use of intelligent technology, innovative construction methods, ecologically friendly materials and use of environmentally-friendly energy resources. This book begins with an overview of the various approaches and developments in sustainable architecture, followed by an in-depth section on urbanism looking at several European towns. In the third section the technologies, materials and methods of ecological architecture are examined. Concluding the volume are 23 sophisticated and innovative European case studies. The author and architect Dominique Gauzin-Müller has specialised on energy and environmental issues and ecological architecture for over 15 years.

Essential information for the design of senior living facilities Building Type Basics for Senior Living, Second Edition is your one-stop reference for essential information you need to plan and successfully complete the design of residential care environments for seniors on time and within budget. Primary authors Bradford Perkins and J. David Hogg and their Perkins Eastman colleagues—all experts in senior living design—share firsthand knowledge to guide you through all aspects of the design of senior living communities, including independent living and assisted living apartments, and skilled nursing facilities. This edition features new examples of completed projects and is up to date with the latest developments in senior living design, including coverage of sustainable design, renovation and reinvention, international opportunities, operations, and project financing. This new edition offers: Numerous photographs, diagrams, and plans A new chapter on issues, trends, and challenges for the senior living industry in the next decade A new chapter devoted to sustainability strategies and considerations Up-to-date coverage of new technologies being implemented in senior living facilities New space programming standards and sample programs Like every Building Type Basics book, this conveniently organized quick reference provides authoritative, up-to-date information instantly and saves professionals countless hours of research.

The Complete Guide to Alternative Home Building Materials & Methods

The definitive guide to environmental control systems, updated with emerging technology and trends The Interactive Resource Center is an online learning environment where instructors and students can access the tools they need to make efficient use of their time, while reinforcing and assessing their understanding of key concepts for successful understanding of the course. An access card with redemption code for the online Interactive Resource Center is included with all new, print copies or can be purchased separately. (***) If you rent or purchase a used book with an access code, the access code may have been redeemed previously and you may have to purchase a new access code ISBN: 978111899616-4). The online Interactive Resource Center contains resources tied to the book, such as: Interactive Animations Interactive Self-tests Interactive Flashcards Case Studies Respondus Testbank (instructors only) Instructor's Manual (over 200 pages) including

Where To Download Building Type Basics For Housing

additional resources (Instructors only) Roadmap to the 12th Edition (Instructors only) Student Guide to the Textbook Mechanical and Electrical Equipment for Buildings, Twelfth Edition is the industry standard reference that comprehensively covers all aspects of building systems. With over 2,200 drawings and photographs, the book discusses basic theory, preliminary building design guidelines, and detailed design procedure for buildings of all sizes. The updated twelfth edition includes over 300 new illustrations, plus information on the latest design trends, codes, and technologies, while the companion website offers new interactive features including animations, additional case studies, quizzes, and more. Environmental control systems are the components of a building that keep occupants comfortable and help make the building work. Mechanical and Electrical Equipment for Buildings covers both active controls, like air conditioners and heaters, as well as passive controls like daylighting and natural ventilation. Because these systems comprise the entire energy use and costs of a building's life, the book stresses the importance of sustainability considerations during the design process, by both architects and builders. Authored by two leading green design educators, MEEB provides the most current information on low-energy architecture, including topics like: Context, comfort, and environmental resources Indoor air quality and thermal control Illumination, acoustics, and electricity Fire protection, signal systems, and transportation Occupant comfort and building usability are the most critical factors in the success of a building design, and with environmental concerns mounting, it's becoming more and more important to approach projects from a sustainable perspective from the very beginning. As the definitive guide to environmental control systems for over 75 years, Mechanical and Electrical Equipment for Buildings is a complete resource for students and professionals alike.

A Decent Place to Live

“Longer lifespans and the needs of the oldest old are challenging the senior living industry to find bold and compassionate solutions to combine programs and services with housing. Victor Regnier's latest research provides a thoughtful and insightful roadmap that arrays new ways of thinking from small-scale settings to community based options. International case studies offer possible solutions with the best thinking from around the globe...all with Vic's unique perspective of extracting themes and concepts that are broadly applicable and essential to addressing the needs of those that live on life's fragile edge.” —David Hogle, FAIA “Supporting the independence of the oldest-old is a tough problem Victor Regnier addresses in his latest book on aging and housing. Like previous work, Victor relies on the best practices of northern Europeans to outline a three-prong approach. First, providing extremely comprehensive home care services in an "apartment for life" setting. Second, reforming the conventional nursing home by exploring small group style accommodations. Third, combining new technology with community based services to age in place. Case studies document the experiences of others in making these programs work here and abroad. The magnitude of the 90+ and 100+ population increases in the next 50 years make it clear how important it is to address this concern today.” —Edward Steinfeld Darch “The movement of health care from the institution to the home is a theme that Regnier identifies as one of the most

Where To Download Building Type Basics For Housing

important lessons in rethinking the issue of how to support the ever growing and increasingly aged older population here and abroad. He examines simple but profound approaches we can take in making long-term care a more humane proposition. Familiar themes like humanizing technology and optimizing the impact of the natural environment are brought together with clear policy thinking about what we need to do. The timing is good because the impact of this growing segment of society will have major repercussions on health care for the next 50-70 years.” —Stephan Verderber, Ph.D. A comprehensive guide to designing housing for the world’s aging population The dilemma of helping older people maintain their independence through better housing with services is growing. This book presents innovative solutions for those who create and provide housing for the world’s increasingly longer-living population. By focusing on three specific housing and service arrangements, it offers alternatives that provide greater freedom of choice than the current living arrangements that exist today. It presents selected examples of housing and service solutions from the US, Sweden, Denmark and the Netherlands to stimulate thinking about the possibilities of community-based service models. Housing Design for an Increasingly Older Population looks at a trio of options for housing the “oldest-old:” the Dutch Apartment/Condo for Life Model (AFL); decentralized Small/Green Houses; and the provision of enhanced personal and health care for people who want to stay in their own home. It offers unique and eye-opening chapters covering: what older people want; what age changes affect independence; demographics and living arrangements; how long-term care is defined; concepts and objectives for housing the frail; care giving and management practices that avoid an institutional lifestyle; innovative case studies; programs that encourage staying at home with service assistance; therapeutic use of outdoor spaces; how technology will help people stay independent; and more. Based on the author’s numerous conversations with other experts, as well as his examinations of high quality settings from Northern Europe and the US Building case study examples showcase innovative and compassionate solutions In-depth coverage of three major systems that work Examines successful programs such as PACE, Friendly Cities, NORC, and the “Village to Village Network” to demonstrate the progress made in helping older, frail people stay in their own homes for as long as possible Housing Design for an Increasingly Older Population: Redefining Assisted Living for the Mentally and Physically Frail is an important book for those who create, design, and manage assisted living and skilled nursing facilities, as well as for those who set policies regarding health, and personal care for our world’s aging society.

Building Type Basics for Research Laboratories

"A Decent Place to Live is a fabulous piece of work. Well-written, candid and engaging, its honesty is refreshing; nothing is swept under the rug. The voices of the tenants carry the story forward, but the transformation of Columbia Point is set in a political context and the impact of government policies is explored. A valuable resource for urban planners, architects, housing policy makers, and developers." -- Hubert E. Jones, Assistant Chancellor for Urban Affairs, University of Massachusetts, Boston

Building Type Basics for College and University Facilities

Learn how to identify, locate, and effectively use alternative building materials, including cob, adobe, rammed earth, bamboo, cork, wool carpeting, and more. You will also learn about the structure, climate control, siting, foundations, and flooring options you gain when using these materials. Ultimately, you will come to understand that these materials are cheaper, easier to build with, stronger, more durable, and more fire resistant.

Sustainable Architecture and Urbanism

Hugh Hardy covers the essentials of designing performing arts facilities, including need-to-know information about design renovation, & technical aspects such as lighting, acoustics & materials.

Architectural Graphic Standards for Residential Construction

The home, an essential part of the American dream, has been beset by troubles since the beginning of the Great Recession in 2007. Whether from an unstable housing economy, ever-rising energy costs, or the environmental ruin of urban sprawl, the origin and variety of these assaults can be bewildering. Surprisingly, some of the answers to many of these modern-day troubles lie in some of humanity's most ancient building techniques. Earth-sheltered building has existed since the heyday of Skara Brae in Scotland 5,000 years ago, and is used today by people around the world, from the Yaodong of northwest China to the subterranean residents of Coober Pedy, Australia, and even to converted missile silos in America. If you have ever looked at your power bill in stunned disbelief, if you are interested in green building techniques, or if you want your home to stand out (or hide out), then this book is for you. Contrary to popular misconceptions of being cramped, dark, or dank domiciles, earth-sheltered homes come in a number of different styles, incorporating brilliant techniques designed to bring light and air into the home. With *The Complete Guide to Building Affordable Earth-Sheltered Homes*, you will learn about the many different types of earth-sheltered homes and their various advantages, including a life span that can be two to three times longer than that of conventional housing, inexpensive building materials, and reduced maintenance costs. Additionally, the energy costs of an earth-sheltered home can be as much as 80 percent lower than a conventional home's power costs. The book will also examine the different environmental factors that you need to consider when selecting which style to build and how to begin, and carry out, your building process. Some of the factors discussed include the different types of soil and how to adjust to them, the level of precipitation and how to manage runoff, and how to maximize use of natural light sources. Construction experts and earth-sheltered homebuilders have been interviewed and their expertise is included in this guide to help you learn how you can create your own underground home. Details of construction methods are found throughout the book, including tips and advice for planning, excavation, flooring,

Where To Download Building Type Basics For Housing

walls, framing, waterproofing, roofing, drainage, and insulation. You will also learn how to pour your own footings and floor, how to dry stack concrete block walls, how to use post and beam framing, and how to waterproof the membranes. With the information provided in this book, you can start planning and building your own earth-sheltered home in no time so that you, too, can benefit from the natural protection of the earth. If earth-sheltered building is good enough for Bill Gates's ½ \$136 million mansion, then it just might be good enough for you too.

A Field Guide to American Houses

The fastest way to straighten out the learning curve on specialized design projects "The series is welcome . . . By providing recent buildings as examples, supported with technical information and charts of design criteria, these books attempt to bridge the gap between theory and practice."-Oculus Building Type Basics books provide architects with the essentials they need to jump-start the design of a variety of specialized facilities. In each volume, leading national figures in the field address the key questions that shape the early phases of a project commission. The answers to these questions provide instant information in a convenient, easy-to-use format. The result is an excellent, hands-on reference that puts critical information at your fingertips. Building Type Basics for Research Laboratories provides the essential information needed to initiate designs for government, academic, and private research laboratories. Filled with project photographs, diagrams, floor plans, sections, and details, it combines in-depth coverage of the structural, mechanical, energy, cost, and safety issues that are unique to research laboratories with the nuts-and-bolts design guidelines that will start any project off on the right track and keep it there through completion.

Residential Buildings

To continue developing existing building types in an intelligent way is a crucial task in the field of residential building. For the success of the individual design, as well as for ensuring that tried and tested structures can be utilized, repeated, and varied, a deeper grasp of the underlying types is indispensable. For this typology of residential buildings, the authors have

Where To Download Building Type Basics For Housing

developed systematic new presentations of the most innovative types. Each individual volume lays out the possibilities for using and transforming a particular form of residential structure. The fourth volume deals with the types of freestanding houses, whose all-around orientation allows for the optimal arrangement of all dwellings. A presentation of the freestanding house as an isolated element and as a building block for larger structures is followed by discussions of topics such as self-sufficiency versus neighborhoods, "Raumplan" versus "plan libre," and individuality versus density. Within each type, variants are distinguished according to type of access, number of floors, etc. The range of possible solutions is presented in uniform ground plans and sections newly drawn to scale.

Building Type Basics for Healthcare Facilities

This text is about the design of dignified, affordable housing for those not served by the private sector, and how that housing fits comfortably into our communities. It is a non-technical analysis for everyone interested in the creation of affordable housing.

Design for Aging

Essential information for the design of college and university facilities Building Type Basics for College and University Facilities, Second Edition is your one-stop reference for the essential information you need to confidently begin the planning process and successfully complete the design of college and university buildings, large or small, on time and within budget. Award-winning architect and planner David J. Neuman and a roster of industry-leading contributors share their firsthand knowledge to guide you through all aspects of planning higher education facilities, including learning centers, academic buildings and professional schools, scientific research facilities, housing, athletics and recreation facilities, social and support facilities, and cultural centers. The book combines up-to-date coverage of essential issues related to campus planning, programming, and building design guidelines with detailed project examples. This new edition offers: Numerous photographs, diagrams, plans, and sections Updated project examples, including several buildings completed in the last decade Up-to-date coverage of sustainability and technology issues A new chapter on historic preservation, rehabilitation, and adaptive use of existing buildings New material on the influence of interdepartmental collaboration and renewed communication on the built environment for campuses This conveniently organized quick reference is an invaluable guide for busy, dedicated professionals who want to get educated quickly as they embark on a new project. Like every Building Type Basics book, it provides authoritative, up-to-date information instantly and saves professionals countless hours of research.

Apartments, Townhouses, & Condominiums

Restoring Old Buildings for Contemporary Uses

As a result of the historic preservation movement, the addition of new construction to existing architecture is no longer limited to historic or significant buildings. This design sourcebook conveys existing attitudes and interesting ideas regarding the combining of old and new architecture, and covers the many practical issues architectural firms must consider. Each of the three main sections addresses a specific approach to combining old and new architecture: additions to buildings, altering the original, and new construction. And each clearly shows that design decisions can and should combine a reasoned approach to the existing environment with the new demands of today. Examples by architectural firms such as Roche Dinkeloo, SOM, Cambridge Seven Associates, Geddes Brecher Qualls Cunningham, and Paul Rudolph illustrate the wide range of responses to design decisions as well as their varying degrees of success.

Building Type Basics for Hospitality Facilities

Here's the in-depth information you need to initiate designs for a variety of justice facilities, including law enforcement, adult detention, courts, corrections, juvenile and family justice, and multi-occupancy facilities. Features project photographs, diagrams and floor plans, and sections and details. The Principles of Housing

Architecture/Interior Design An in-depth look at the most innovative aged care facilities today With the world's population aging at a rapid pace, there is a growing need for new ways to provide residential care for older people. Design for Aging explores some of the most successful examples of elderly housing today, focusing on integrating architectural considerations within an unwavering people-driven approach. Written by an international team of experts in aged care design, the book brings together twenty-six case studies from around the world, including Australia, Denmark, England, Japan, the Netherlands, Sweden, and the United States. The authors describe how each scheme has succeeded in addressing the needs of its residents regardless of wide variations in design, geography, cultural factors, medical needs, capital cost, and other factors. Clear, well-documented information for each facility includes: Building descriptions and project data, and how the overall design fits within a geographical location The type of community, including number of residents, ethnicity, and specific conditions such as dementia How to apply universal design principles in different political, social, and regulatory contexts How to create a sense of belonging and well-being for residents while building strong connections with the community at large What makes a facility able to attract and retain high-quality caregivers Environmental sustainability
