More than any other area of regulation, antitrust economics shapes law and policy in the United States, the Americas, Europe, and Asia. In a number of different areas of antitrust, advances in theory and empirical work have caused a fundamental reevaluation and shift of some of the assumptions behind antitrust policy. This reevaluation has profound implications for the future of the field. The Oxford Handbook of International Antitrust Economics has collected chapters from many of the leading figures in antitrust. In doing so, this two volume Handbook provides an important reference guide for scholars, teachers, and practitioners. However, it is more than a merely reference guide. Rather, it has a number of different goals. First, it takes stock of the current state of scholarship across a number of different antitrust topics. In doing so, it relies primarily upon the economics scholarship. In some situations, though, there is also coverage of legal

scholarship, case law developments, and legal policies. The second goal of the Handbook is to provide some ideas about future directions of antitrust scholarship and policy. Antitrust economics has evolved over the last 60 years. It has both shaped policy and been shaped by policy. The Oxford Handbook of International Antitrust Economics will serve as a policy and research guide of next steps to consider when shaping the future of the field of antitrust.

Issued annually since 1946/47, the Yearbook is the principal reference work of the United Nations, providing a comprehensive, one-volume account of the Organization's work. It includes details of United Nations activities concerning trade, industrial development, natural resources, food, science & technology, social development, population, environment, human settlements, children & legal questions, along with information on the work of each specialized agency in the United Nations family. The Yearbook is an indispensable guide to the UN.

Despite the wide range of technologies involved, the construction industry still relies heavily on one old-fashioned component: the human. The clients, managers, designers, investors, and a whole host of other stakeholders are all involved in a crucial series of relationships that are just as important to project success as technical know-how. As construction projects become increasingly international as well as interdisciplinary, the risk and cost of disharmonious working grows ever larger. The growth of IT and the increased reliance on large mergers and joint-ventures have created new problems, which require a new set of solutions. Recent research has generated profound insights into international differences in business culture. This new work presents up-to-date theory and practical guidance, identifying situations in which cultural differences present challenges. A focus on "critical incidents", demonstrated in a range of case studies will help readers to foresee such situations in their own projects and processes, and so improve strategic and operational decision-making in construction collaborations. Detailed examples are taken from the Netherlands, Germany, Poland, Turkey, the UAE, and China, to explore a variety of problems in very different economic and cultural surroundings. A range of professionals (contractors, developers, investors, architects, engineers, governments, public/private clients) will find this book highly

valuable, as will researchers and students.
