A Janeite Journal (Pride and Prejudice) (#3)

This book argues that there is a new, Sinological form of orientalism at work in the world. It has shifted from a logic of 'essential difference' to one of 'sameness' or general equivalence. "China" is now in a halting but inevitable process of becoming-the-same as the USA and the West. Orientalism is now closer to the cultural logic of capitalism, even as it shows the afterlives of colonial discourse. This shift reflects our era of increasing globalization; the migration of orientalism to area studies and the pax Americana; the liberal triumph at the "end" of history and the demonization of Maoism; an ever closer Sino-West relationship; and the overlapping of anti-communist and colonial discourses. To make the case for this re-constitution of orientalism, this work offers an inter-disciplinary analysis of the China field broadly defined. Vukovich takes on specialist work on the politics, governance, and history of the Mao and reform eras, from the Great Leap Forward to Tiananmen, 1989; the Western study of Chinese film; recent work in critical theory which turns on 'the China-reference'; and other global texts about or from China. Through extensive analysis, the production of Sinological knowledge is shown to be of a piece with Western global intellectual political culture. This work will be of great interest to scholars of Asian, postcolonial and cultural studies.

India's history and culture is ancient and dynamic, spanning back to the beginning of human civilization. Beginning with a mysterious culture along the Indus River and in farming communities in the southern lands of India, the history of India is punctuated by constant integration with migrating peoples and with the diverse cultures that surround the country. Placed in the center of Asia, history in India is a crossroads of cultures from China to Europe, as well as the most significant Asian connection with the cultures of Africa. The Historical Dictionary of Ancient India provides information ranging from the earliest Paleolithic cultures in the Indian subcontinent to 1000 CE. The ancient history of this country is related in this book through a chronology, an introductory essay, a bibliography, and hundreds of cross-referenced dictionary entries on rulers, bureaucrats, ancient societies, religion, gods, and philosophical ideas.

Financial Liberalization and the Asian Crisis

Tall buildings are not the only solution for achieving sustainability through increased density in cities but, given the scale of current population shifts, the vertical city is increasingly being seen as the most viable solution for many urban centers. However, the full implications of concentrating more people on smaller plots of land by building vertically - whether for work, residential or leisure functions - needs to be better researched and understood. It is generally accepted that we need to reduce the energy equation - in both operating and embodied terms - of every component and system in the building as an essential element in making it more sustainable. Mechanical HVAC systems (Heating, Ventilation and Air-Conditioning) in

tall office buildings typically account for 30-40 percent of overall building energy consumption. The increased efficiency (or possibly even elimination) of these mechanical systems - through the provision of natural ventilation - could thus be argued to be the most important single step we could make in making tall buildings more sustainable. This guide sets out recommendations for every phase of the planning, construction and operation of natural ventilation systems in these buildings, including local climatic factors that need to be taken into account, how to plan for seasonal variations in weather, and the risks in adopting different implementation strategies. All of the recommendations are based on analysis of the research findings from richly-illustrated international case studies. Tried and tested solutions to real-life problems make this an essential guide for anyone working on the design and operation of tall buildings anywhere in the world. This is the first technical guide from the Council on Tall Buildings and Urban Habitat's Tall Buildings & Sustainability Working Group looking in depth at a key element in the creation of tall buildings with a much-reduced environmental impact, while taking the industry closer to an appreciation of what constitutes a sustainable tall building, and what factors affect the sustainability threshold for tall.

The Asian financial crisis of 1997-98 shook the foundations of the global economy. What began as a localized currency crisis soon engulfed the entire Asian region. What went wrong and how did the Asian economies, long considered "miracles," respond? How did the United States, Japan and other G-7 countries react to the crisis? What role did the IMF play? Why did China remain conspicuously insulated from the turmoil raging in its midst? What lessons can be learnt from the crisis by other emerging economies? This book provides answers to all the above questions and more. It gives a comprehensive

account of how the international economic order operates, examines its strengths and weaknesses, and what needs to be done to fix it.

The Shipping Law Review

Analyzing the Music of Living Composers (and Others) is a collection of essays that grew out of the 2010 annual meeting of the West Coast Conference of Music Theory and Analysis. The stated purpose was to apply traditional music-analytic techniques, as well as new, innovative techniques, to describing the music of composers of the late 20th and early 21st centuries. The goal was to take steps toward making the music of our time a bit less impenetrable for our colleagues,

students and other listeners by showing how it follows, varies, and sometimes controverts the organizational schemes of older music. This collection includes chapters analyzing music of older eras as well, including a number that throw light on the analysis of recent music in unexpected ways, and there are also several chapters that propose innovative analytic approaches to recent popular music and jazz.

Conservation of monuments and historic sites is one of the most challenging problems facing modern civilization. It involves various cultural, humanistic, social, technical, economical and administrative factors, intertwining in inextricable patterns. The complexity of the topic is such that guidelines or recommendations for intervention techniques and design approaches are difficult to set. The Technical Committee on the Preservation of Monuments and Historic Sites (named TC19) was established by the International Society of Soil Mechanics and Geotechnical Engineering (ISSMGE) in 1981, is supported by the Italian Geotechnical Society (AGI), and was renamed TC301 in 2010. This book assesses the role of historic towers as symbols of community identity and how to best preserve this special cultural heritage. Well-documented, exemplary case histories highlight concepts of preservation, integrity, cultural heritage, dynamic identification techniques and techniques for long-term monitoring of historic towers, as well as provide examples of appropriate intervention measures. The book will be of interest to professionals and academics in the wider fields of civil engineering, architecture and cultural resources management, and particularly those involved in art history, history of architecture, geotechnical engineering, structural engineering, archaeology, restoration and cultural heritage management.

The Asian Financial Crisis

The financial crisis that hit a number of 'miracle' economies of Asia in 1997 shocked the world. Financial Liberalization and the Asian Crisis rejects conventional explanations of the crisis as the outcome primarily of inefficient and corrupt economics systems in the countries concerned. It argues that the crisis was the result of premature and overly rapid financial liberalization in a world of increasing financial liquidity and volatility, and calls for a more cautious approach to financial liberalization, and a reform of the international financial architecture.

You blunder into the grand opening of a new hospital, sign up to volunteer and, with considerable reluctance, let yourself be assigned to the ER. What starts as a Monday evening lark eventually becomes a life-changing experience. Your new course leads from the ER to becoming a volunteer EMT and, later, a paramedic and a perennial night school student. Eventually, at an age when others might be thinking of retiring to play golf, you quit your job, move away from home, and go back to college as a physician assistant student with strangers less than half your age. This book details the often humorous experience that follows from a perspective that hopefully will help others follow their own paths, whatever they may be. Along the way, new experiences evoke old memories, while new friends, teachers, and patients teach important new lessons. The book comes full circle with a view of what it is like to be a PA, one of U.S. News & World Report's "50 hottest careers."

Project Management in Nuclear Power Plant Construction

As a leading Confederate general, Braxton Bragg (1817–1876) earned a reputation for incompetence, for wantonly shooting his own soldiers, and for losing battles. This public image established him not only as a scapegoat for the South's military failures but also as the chief whipping boy of the Confederacy. The strongly negative opinions of Bragg's contemporaries have continued to color assessments of the general's military career and character by generations of historians. Rather than take these assessments at face value, Earl J. Hess's biography offers a much more balanced account of Bragg, the

man and the officer. While Hess analyzes Bragg's many campaigns and battles, he also emphasizes how his contemporaries viewed his successes and failures and how these reactions affected Bragg both personally and professionally. The testimony and opinions of other members of the Confederate army--including Bragg's superiors, his fellow generals, and his subordinates--reveal how the general became a symbol for the larger military failures that undid the Confederacy. By connecting the general's personal life to his military career, Hess positions Bragg as a figure saddled with unwarranted infamy and humanizes him as a flawed yet misunderstood figure in Civil War history.
