### **International Marine Environmental Law and Policy**

"When either animalists or environmentalists get together and talk about "issues" that are important to them, there is almost no overlap in the topics. There is always the common point, that some humans or corporations are causing the harms they are concerned about, but that is not particularly helpful to solving problems. So the groups go about their good work without reaching out to others, as they seldom share priorities in a world of limited resources."--From the foreword by David S. Favre, Professor of Law & The Nancy Heathcote Professor of Property and Animal Law, Michigan State University College of Law This edited volume by Professor Randall S. Abate of Florida A&M University College of Law presents a collection of 17 chapters in an attempt to fill the gap--as illustrated above--between the complex legal issues that matter most to environmental law and animal law movements. Environmental law has a longer history and is more established than its animal law counterpart with intricate layers of international, federal, state, and local laws. Animal law currently

faces many of the legal and strategic challenges that environmental law faced in seeking to establish a more secure foothold in U.S. and international law and, as such, stands to gain valuable insights from the lessons of the environmental law movement's experience in confronting those challenges. These chapters compare the very different trajectories of the regulatory history of both movements, examining the legal intersections that may exist across them. Prof. Abate draws on the talents of 22 experts in their fields from academia, non-profits, and the legal profession to examine the ways in which animal rights and welfare law can benefit from environmental law. The chapters address various contexts and perspectives from U.S. law, foreign domestic law, and international law on substantive issues including climate change, international trade and the environment, concentrated animal feeding operations, invasive species, lead pollution, and fisheries management, and procedural issues including standing and damages. The book concludes with two chapters that offer a vision for the future regarding how animal law can learn from environmental law and how the two movements can better coordinate their common objectives. Reviews: "This is a path-breaking collection of thoughtful essays on the relationship between traditional environmental law and the emerging law of animal rights and welfare. Indeed these closely reasoned accounts show how intertwined are the strands of law that comprise these seemingly disparate fields. In a human dominated world the book is a useful reminder that hubris can lead to catastrophe for all forms of life on earth."--Patrick Parenteau, Professor of Law, Senior

Counsel Environmental and Natural Resources Law Clinic, Vermont Law School "Professor Abate's book is an extremely valuable contribution. It's an excellent compendium of environmental laws and treaties pertinent to animal welfare, as well as lessons that the more developed field of environmental law may present for the emerging field of animal law."--Dr. Wil Burns Co-Executive Director, Forum for Climate Engineering Assessment and Chair, Environmental Law Section of the International Law Association "This book contains a valuable, well-written, and incisive collection of essays by outstanding experts in the fields of environmental and animal law. It deserves a place on the bookshelves of all animal rights and environmental law attorneys and anyone else who believes that our natural surroundings, and the living creatures which inhabit it, deserve to be valued and protected."--Joel Mintz, Professor of Law, Nova Southeastern University Shepard Broad Law Center "Always up for a challenge, Professor Abate has gathered together an impressive group of Animal Law experts and asked them to climb a very steep mountai

### **Environmental Law and Policy in the Pacific Basin Area**

This volume examines environmental law and governance in the Pacific, focusing on the emerging challenges this region faces. The Pacific is home to some of the world's most astonishing biological and cultural diversity. At the same time, Pacific Island nations are economically and technically under-resourced in the face of tremendous environmental challenges. Destructive weather events, ocean acidification, mining, logging, overfishing, and pollution increasingly degrade ecosystems and affect fishing, farming, and other cultural practices of Pacific Islanders. Accordingly, there is an urgent need to understand and analyse the role of law and governance in responding to these pressures in the Pacific. Drawing on academic and practitioner expertise from the Pacific region, as well as Europe and the United States, this unique collection navigates the major environmental law and governance challenges of the present and future of the Pacific. Environmental Law and Governance in the Pacific discusses 21 Pacific Island countries and territories, including Cook Islands, Fiji, Papua New Guinea, Solomon Islands, Vanuatu, and Samoa, and a

broad range of themes, such as deep-sea mining, wetlands and mangroves, heritage, endangered species, human rights, and access to justice, are addressed, thus providing a comprehensive and state-of-the-art overview of environmental law and governance within specific jurisdictions as well as across the Pacific region as a whole. This volume will be essential reading for students and scholars interested in environmental law and governance in the Pacific region, as well as policy-makers, practitioners and NGOs involved in the development and implementation of environmental law and policy.

C.O.OKIDI I welcome the opportunity to prepare a Foreword to the book on Environmental Policy and Law in Africa, edited by Kevin R. Gray and Beatrice Chaytor. It is a pleasure to do that because the book is a contribution to the cause of capacity building for development and implementation of environmental law in Africa, a goal towards which I have had an undivided focus over the last two decades. There is still some belief in and outside Africa that for developing countries in general, and Africa in particular, development and implementation of environmental law is not a priority. This belief prevails strongly in many quarters of the industrialised countries. In fact, the view is held either out of blatant ignorance or by some renegade industrialists who fail to appreciate Michael Royston's 1979 thesis that

Pollution Prevention Pays.<sup>2</sup> That group, for obvious reasons, must have their correspondent counterparts in Africa to provide hope that industries rejected as derelict in the West or inoperable due to rigorous environmental regulation, can find homes to which they can escape and dump their polluting industries.

### **Environmental Law and Policy**

Traces important legal, economic, and scientific developments in the environmental field through an examination of environmental law cases and commentaries by leading scholars, focusing on pollution prevention and control and emphasizing the evaluation, design, and use of the law to stimulate technological change and industrial transformation. The past twenty-five years have seen a significant evolution in environmental policy, with new environmental legislation and substantive amendments to earlier laws, significant advances in environmental science, and changes in the treatment of science (and scientific uncertainty) by the courts. This book offers a detailed discussion of the important issues in environmental law, policy, and economics, tracing their development over the past few decades through an examination of environmental law cases and commentaries by leading scholars. The authors focus on pollution, addressing both pollution control and prevention, but also emphasize the evaluation, design, and use of the law to stimulate technical change and industrial transformation, arguing that there is a need to address broader issues of sustainable development. Environmental Law, Policy,

and Economics, which grew out of courses taught by the authors at MIT, treats the traditional topics covered in most classes in environmental law and policy, including common law and administrative law concepts and the primary federal legislation. But it goes beyond these to address topics not often found in a single volume: the information-based obligations of industry, enforcement of environmental law, market-based and voluntary alternatives to traditional regulation, risk assessment, environmental economics, and technological innovation and diffusion. Countering arguments found in other texts that government should play a reduced role in environmental protection, this book argues that clear, stringent legal requirements--coupled with flexible means for meeting them--and meaningful stakeholder participation are necessary for bringing about environmental improvements and technological transformations. This 2007 book examines environmental law from a range of perspectives, emphasising the policy world from which environmental law is drawn and nourished. Those working within the discipline of environmental law need to engage with concepts and methods employed by disciplines other than law. The authors analyse the ways in which legal activities are supported and legitimated by work in traditional scientific or technical domains, as well as by certain more obscure but also influential cultural or philosophical assumptions. A range of regulatory techniques is explored in this book, through a close examination of both pollution control and land use. The highly complex nature of current environmental problems, demanding sophisticated and responsive legal controls, is illustrated by several in-depth case studies, including legal and policy analysis of the
