This book is a manual for those involved in traffic accident investigation. Before 1925, systematic traffic accident investigation was practically unknown, but with the advent of the automobile and the resultant prominence of traffic deaths in everyday life, concerned persons and organizations took measures to minimize traffic danger. Accident investigation has become progressively more sophisticated. By reconstructing accidents, determining fault, and obtaining convictions, drivers are urged to be more responsible. This book covers 13 major topics, with specific instructions for various tasks, explaining how each task can better serve the whole of the investigation. These tasks include, for example, taking photos, examining vehicle damage, making sense of involved persons' differing accounts of what happened, questioning witnesses, gauging the mental and emotional state of involved persons and witnesses, measuring the scene, interpreting skidmarks and other bits of evidence, and drawing situation maps. It also elaborates on laws, police and administrative functions, standards, and more. Numerous exhibits, including diagrams, and photographs with captions. Tables, chapter references, index and

glossary.
