This is the fifth, fully updated edition of Roy Goode's seminal work Commercial Law, covering the area's theoretical framework as well as its application. From its first publication, this book was acclaimed as the standard text on this field of the law. Now for its fifth edition, it has been completely revised and expanded to take into account the new developments of the last five years. The book lays out both the framework of commercial law and the application of fundamental principles to typical business transactions. This unique combination of theory and practice is supplemented by specimen documents, tables of statutes, cases and conventions.

Inquiry in Action

Casuistic or case law in the Pentateuch deals with real human affairs; each case law entails a compressed story that can encourage reader engagement with seemingly “dry” legal text. This book is the first to present an interpretive method integrating biblical law, jurisprudence, and literary theory, reflecting the current “law and literature” school within legal studies. It identifies the narrative elements that exist in the laws of the Pentateuch, exposes the narrative techniques employed by the authors, and discovers the poetics of biblical law, thus revealing new or previously unconsidered aspects of the relationship between law and narrative in the Bible.

A lively, unorthodox look at economics, business, and public policy told in the form of a novel. A love story that embraces the business and economic issues of the day? The Invisible Heart takes a provocative look at business, economics, and regulation through the eyes of Sam Gordon and Laura Silver, teachers at the exclusive Edwards School in Washington, D.C. Sam lives and breathes capitalism. He thinks that most government regulation is unnecessary or even harmful. He believes that success in business is a virtue. He believes that our humanity flourishes under economic freedom. Laura prefers Wordsworth to the Wall Street Journal. Where Sam sees victors, she sees victims. She wants the government to protect consumers and workers from the excesses of Sam's beloved marketplace. While Sam and Laura argue about how to make the world a better place, a parallel story unfolds across town. Erica Baldwin, the crusading head of a government watchdog agency, tries to bring Charles Krauss, a ruthless CEO, to justice. How are these two dramas connected? Why is Sam under threat of dismissal? Will Erica Baldwin find the evidence she needs? Can Laura love a man with an Adam Smith poster on his wall? The answers in The Invisible Heart give the reader a richer appreciation for how business and the marketplace transform our lives.

Human Factors in Paramedic Practice

Security Awareness: Applying Practical Security in Your World

Human factors is a scientific discipline which is used to understand the interacting elements and design of a complex system, aimed at improving system performance and optimising human well-being. This book brings together a range of specialist authors to explore some of the key concepts of human factors related to the field of paramedic practice. The

system elements of paramedic practice can include the patient, the paramedic and their colleagues, the environment, the equipment, the tasks, and the processes and procedures of the organisation. The relationships between these components are explored in detail through chapters which cover 'human error', systems thinking, human-centred design, interaction with the patient, non-technical skills of individuals and teams, well-being of the paramedic, safety culture and learning from events. This helpful and informative guide provides frontline paramedics and ambulance clinicians with practical advice and knowledge of human factors that will be helpful in supporting safe and effective practice for all involved. It will also be of interest to pre-hospital care professionals who are involved in education, learning from events, procurement and influencing safety culture. Above all, it shows how an understanding and application of human factors principles can enhance system performance and well-being, and ultimately lead to safer patient care.

The Journal, initially dictated to his stepson-in-law when they were both imprisoned in the mid-1670s, combines burning

rage against social injustice and a visionary sense of God 'rising' through all creation with a forthright account of his own persecution and suffering. Written in a style which, in some respects, anticipates the work of James Joyce and the other great modernists, it is, as Nigel Smith writes in his stimulating Introduction, not only 'a classic of spiritual and autobiographical writing' but 'an important literary achievement in its own right'.

This combination of text and lab book presents an entirely different approach to structural geology. Designed for undergraduate laboratory classes, it provides a step-by-step guide for solving geometric problems arising from structural field observations. The book discusses both traditional methods and cutting-edge approaches, with emphasis given to graphical methods and visualization techniques that support students in tackling challenging two- and three-dimensional problems. Numerous exercises encourage practice in using the techniques, and demonstrate how field observations can be converted into useful information about geological structures and the processes responsible for creating them. This updated fourth edition incorporates new material on stress, deformation, strain and flow, and the underlying mathematics of the subject. With stereonet plots and solutions to the exercises available online at www.cambridge.org/ragan, this book is a key resource for undergraduates, advanced students and researchers wanting to improve their practical skills in structural geology.
