Dutch Paintings of the Seventeenth Century

WHO'S WHO OF AMERICAN WOMEN is the one essential reference to depend on for accurate & detailed facts on American women of achievement. This new edition includes in-depth biographical profiles of prominent, accomplished women.

Postmodernist Fiction

Who's who in the West

250 examples of the latest graphic design drawn from various countries between '94 and '95. Brings together products for the retail market and many examples of corporate publicity calendars not normally available to the public.

Wicked Intelligence

Forthcoming Books

'Forget Me Not' explores the relationship between photography and memory and shows how ordinary people have sought to strengthen the emotional appeal of photographs, primarily by embellishing them to create strange and often beautiful hybrid objects.

A Catalogue Raisonné of the Works of the Most Eminent Dutch Painters of the Seventeenth Century

In late seventeenth-century London, the most provocative images were produced not by artists, but by scientists. Magnified fly-eyes drawn with the aid of microscopes, apparitions cast on laboratory walls by projection machines, cut-paper figures revealing the "exact proportions" of sea monsters—all were created by members of the Royal Society of London, the leading institutional platform of the early Scientific Revolution. Wicked Intelligence reveals that these natural philosophers shaped Restoration London's emergent artistic cultures by forging collaborations with court painters, penning art theory, and designing triumphs of baroque architecture such as St Paul's Cathedral. Matthew C. Hunter brings to life this archive of experimental-philosophical visualization and the deft cunning that was required to manage such difficult research. Offering an innovative approach to the scientific image-making of the time, he demonstrates how the Restoration project of synthesizing experimental images into scientific knowledge, as practiced by Royal Society leaders Robert Hooke and Christopher Wren, might be called "wicked intelligence." Hunter uses episodes involving specific visual practices—for instance, concocting a lethal amalgam of wax, steel, and sulfuric acid to produce an active model of a comet—to explore how Hooke, Wren, and their colleagues devised representational modes that aided their experiments. Ultimately, Hunter argues, the craft and craftiness of experimental visual practice both promoted and menaced the artistic traditions on which they drew, turning the Royal Society projects into objects of suspicion in Enlightenment England. The first book to use the physical evidence of Royal Society experiments to produce forensic evaluations of how scientific knowledge was generated, Wicked Intelligence rethinks the parameters of visual art, experimental philosophy, and architecture at the cusp of Britain's imperial power and artistic efflorescence.

ABM

You've read about Jack Welch, Lou Gerstner and Steve Jobs - but what can you learn about business from van Gogh and Picasso? The Fine Art of Success shows why you should look to pop-stars like Madonna or artists like Damian Hirst for guidance on innovation, competitive advantage, leadership, and a host of other business issues. Managers, marketing professionals, and students will see how these creative artists can help their organizations. Chapters include Madonna - Strategy at the dance floor; Damian Hirst - The shark is dead/How to build yourself a new market; Beuys – Understanding creativity, is every manager an artist; Picasso – Art lessons for global managers; Koons – Made in Heaven produced on eart; and Paik – Global Groove, innovation through juxtaposition. With controversial ideas, fascinating facts and memorable examples, The Fine Art of Success delivers business lessons that you'll be eager to apply.

Catalog of the Library of the National Museum of African Art Branch of the Smithsonian Institution Libraries

Ever since its invention, photography has enjoyed a close and mutually stimulating relationship with architecture - an association underlined by one description of photography as "building with light". So well established is this link that photography is now regarded as the easiest and most reliable means of making architecture and its ideas accessible to a wider public. Our first, sometimes our only, impression of a building often comes from a photograph, and the skilled photographer can help us to see even the most familiar structures with a fresh eye. This book offers a lively exploration of the development of architectural photography and some of its key themes. From the earliest examples of the genre in the nineteenth century to today's digital revolution, Robert Elwall skilfully focuses on the changing aesthetic of the medium worldwide. Included are such topics as the early influence of architectural drawing; the growth of specialist photographic firms documenting the nineteenth-century building boom; the influence of photography on both architectural practice and history; the invention of half-tone reproduction; the role of photography in the spread of Modernism; the impact of colour photography during the 1970s and 1980s; and the increasing use of computers to shape a new direction. Authoritatively written by a world-renowned expert and illustrated with arresting images from collections throughout the world, this study is essential reading for anyone interested in architecture, photography and the history of their special relationship. Book jacket.

Cyclopedia of Painters and Paintings

Catalogue of Fine Modern Paintings and Drawings : Comprising the Well-known Collection of the Late Major Richard Wyndham Et Al., which Will be Sold by Auction by Messrs. Sotheby & Co Wednesday, the 24th of November, 1948

This volume provides an overview of the Multics system developed at M.I.T.—a time-shared, general purpose utility-like system with third generation software. The advantage that this new system has over its predecessors lies in its expanded capacity to manipulate and file information on several levels and to police and control access to data in its various files. On the invitation of M.I.T.'s Project MAC, Elliott Organick developed over a period of years an explanation of the workings, concepts, and mechanisms of the Multics system. This book is a result of that effort, and is approved by the Computer Systems Research Group of Project MAC. In keeping with his reputation as a writer able to explain technical ideas in the computer field clearly and precisely, the author develops an exceptionally lucid description of the Multics system, particularly in the area of "how it works." His stated purpose is to serve the expected needs of designers, and to help them "to gain confidence that they are really able to exploit the system fully, as they design increasingly larger programs and subsystems." The chapter sequence was planned to build an understanding of increasingly larger entities. From segments and the addressing of segments, the discussion extends to ways in which procedure segments may link dynamically to one another and to data segments. Subsequent chapters are devoted to how Multics provides for the solution of problems, the file system organization and services, and the segment management functions of the Multics file system and how the user may employ these facilities to advantage. Ultimately, the author builds a picture of the life of a process in coexistence with other processes, and suggests ways to model or construct subsystems that are far more complex than could be implemented using predecessor computer facilities. This volume is intended for the moderately well-informed computer user accustomed to predecessor systems and familiar with some of the Multics overview literature. While not intended as a definitive work on this living, ever-changing system, the book nevertheless reflects Multics as it has been first implemented, and should reveal its flavor, structure and power for some time to come.

The Fine Art of Success

Canadian Who's who

In this trenchant and lively study Brian McHale undertakes to construct a version of postmodernist fiction which encompasses forms as wide-ranging as North American metafiction, Latin American magic realism, the French New New Novel, concrete prose and science fiction. Considering a variety of theoretical approaches including those of Ingarden, Eco, Dolezel, Pavel, and Hrushovski, McHale shows that the common denominator is postmodernist fiction's ability to thrust its own ontological status into the foreground and to raise questions about the world (or worlds) in which we live. Exploiting various theoretical approaches to literary ontology - those of Ingarden, Eco, Dolezel, Pavel, Hrushovski and others - and ranging widely over contemporary world literature, McHale assembles a comprehensive repertoire of postmodernist fiction's strategies of world-making and -unmaking.

Abstracts of journal articles, books, essays, exhibition catalogs, dissertations, and exhibition reviews. The scope of ARTbibliographies Modern extends from artists and movements beginning with Impressionism in the late 19th century, up to the most recent works and trends in the late 20th century. Photography is covered from its invention in 1839 to the present. A particular emphasis is placed upon adding new and lesser-known artists and on the coverage of foreign-language literature. Approximately 13,000 new entries are added each year. Published with title LOMA from 1969-1971.

Building with Light

The Directory of U.S. Trademarks

From the hardships of a long and arduous war with Spain, the seventeenth-century Dutch seem to have drawn strength and expressed pride in their unique social and cultural heritage, especially in their art. Arthur K. Wheelock Jr., the Gallery's curator of northern Baroque painting, has carefully studied the Gallery's collection by masters of the Golden Age of Dutch art--notably Cuyp, De Hooch, Rembrandt, Ruisdael, and Vermeer. The twenty-three paintings by Rembrandt and his school are elucidated by an essay on the question of attribution, while an appendix of artists' signatures amplifies and supports the author's wide-ranging discussions of this remarkably cohesive collection.
