Atlas of Breast Cancer Surgery

This superbly illustrated atlas, with accompanying videos, depicts step by step the procedures currently used in breast cancer surgery. The coverage is comprehensive, embracing a wide range of techniques employed in excision biopsy, breast-conserving surgery, mastectomy, lymph node surgery, reconstruction, oncoplastic surgery, and endoscopy-assisted surgery. In addition, approaches appropriate in patients with locoregional recurrence or metastasis are documented. Great care has been taken to present procedures clearly and precisely, enabling the surgical trainee easily to learn all aspects. Tips and tricks are highlighted, and pitfalls identified. The atlas reflects the progress that has been made in developing new and refining established techniques in recent years. It will be an excellent guide for novices to the field and an ideal reference for more experienced surgeons.
