The Doctor of Nursing Practice Essentials

In an era of rapidly shrinking resources, efficient utilization of public resources is of paramount importance. Health care, social services, education, law enforcement, and other fields have established their own standards against which program operations are assessed. National accrediting bodies have implemented systems of rigorous peer review to ensure the quality of program processes and outcomes. Nongovernmental organizations must demonstrate success in achieving their stated goals in order to sustain or expand program funding. In the 21st century, process (how programs are organized and how work is conducted) has become as important as outcomes in determining program effectiveness. Responding to these

dynamic challenges, the authors utilize concrete case studies to immerse students in the techniques of program evaluation. They effectively examine systems theory, project planning, queuing theory, cost-benefit analysis, and organization processes (including standards-based program accreditation), providing practical examples in an easy-to-comprehend style. In addition, comprehensive discussions explain how process intervention is utilized to achieve program adaptations and strategic change. Like its highly regarded predecessors, the latest edition features evaluation exercises designed to facilitate student development of indicators and measures when dealing with real-world programs. An Instructors Manual provides solutions to the case studies in the appendix of the text, further clarifying the program planning and evaluation process.

Evaluating Public and Community Health Programs

The use of seatbelts, the requirements for smoke detectors, and other kinds of public health interventions have been highly successful in reducing disability, injuries, and premature mortality. Prevention in mental health— identifying and treating mental illnesses before they become full blown syndromes or identifying people at risk for a condition—is just as critical to public mental health. This research-based resource gives practitioners a nuts-and-bolts guide to designing and evaluating prevention programs in mental health that are culturally relevant and aimed at reducing the number of new problems that occur. Key Features Employs a 10-step prevention program development and evaluation model that emphasizes the concepts of community, collaboration, and cultural relevance Offers a brief, practical, how-to approach that is based on rigorous research Identifies specific prevention program development and evaluation steps Highlights examples of "everyday prevention" practices as well as concrete prevention programs that have proven, effective implementation Promotes hands-on learning with practical exercises, instructive figures, and a comprehensive reference list Intended Audience Written in a straightforward and accessible style, Prevention Program Development and Evaluation can be used as a core text in undergraduate courses devoted to prevention or in graduate programs aimed at practice issues. Current practitioners or policymakers interested in designing prevention programs will find this book to be an affable guide.

"As a practitioner in the field for over thirty years, I have been exposed to endless 'planning' sessions that are prescriptive to the point of being oppressive. This text 'gives permission' to the practitioner to allow for emergence, uncertainty, and ambiguity in the planning process. Comparative Approaches to Program Planning provides a guide for the manager, administrator, executive director, strategic planner, and CEO to embrace multiple planning strategies and the understanding of each. This is extremely worthwhile in a dynamic environment and an ever- changing landscape and worldview." —Paul D. McWhinney, ACSW, Director of Social Services City of Richmond, Richmond, Virginia "This is the book

I've been waiting for. It provides not only a linear approach to program design, but gives language to the tacit knowledge many planners have of the circular nature of their work. Both linear and circular thinking are important to planning processes and now we have a resource for teaching." —Jon E. Singletary, PhD, MSW, MDiv, Baylor University, School of Social Work The first text on program planning to guide readers in selecting program planning approaches appropriate to setting, culture, and context Valuable for students and practitioners in the social work, public administration, nonprofit management, and community psychology fields, *Comparative Approaches to Program Planning* provides practical and creative ways to effectively conduct program planning within human service organizations. Written by leaders in the social work education community, this innovative book explores program planning as a multi-layered and complex process. It examines both a traditional linear problem-solving model as well as an alternative emergent approach to program planning, helping professionals to successfully develop and enact effective and culturally competent planning in organizations and communities.

Health Program Planning: An Educational and Ecological Approach

Evaluating Public and Community Health Programs Evaluating Public and Community Health Programs combines an introduction to public and community health program evaluation with a detailed survey of methods in community assessment, planning, program design, quantitative and qualitative data collection, data analysis, and reporting of findings. The book presents an approach built on the two primary evaluation frameworks that are most common in public and community health: the Donaldson three-step program theory-driven evaluation model and CDC's six-step Framework for Program Evaluation in Public Health. The author emphasizes practical, ongoing evaluation strategies that involve all program stakeholders, not just evaluation experts, and presents a simple and effective standards-based four-step model that will produce rich and useful results. The book's resources (scenarios, worksheets, and guidelines) can be used throughout the planning, implementation, and evaluation process. In addition, each chapter includes a list of learning objectives, key terms, and ideas for review, as well as summaries and discussion questions that can reinforce each chapter's lessons.

This is a core text for courses across mental health service disciplines, including counselling, social work, psychology, public health, and nursing. It was developed by the author for her course in counseling services and administration as a response to her frustration for a comprehensive book that takes students through all the necessary components involved in

developing a mental health community program (such as reducing teen pregnancy, increasing access for minorities, health promotion and prevention). This book is unique in its coverage of all the main areas required to plan and implement a community program, but it goes a step further by including important information on sustaining the program, budgeting, funding, community resource development, and fully implementing the program. In addition, the author has developed a number of tools that aid the student in developing a community program (usually a required class project) including exercises to help with needs assessment and planning, as well as exercises and quizzes, which will be included in a cd with the book. The book presents the author's 13-step model that guides a student through the entire process of planning and developing a mental health community program.
