Few scenes put the senses on edge more than a submerged alligator, only eyes and snout showing, when peering across a southern lake on a misty morning. An iconic American predator, these reptiles grow to thirteen feet or more and can live as long as humans. Alligators are complex creatures, capable of terrific attacks and yet tending to their young in the same gentle way a mother duck looks after her brood. Once extremely numerous, alligators came close to extinction in the twentieth century, but thanks to conservation efforts have since made a comeback, reclaiming their rightful place as the monarchs of the southern wetlands. In this fascinating account, richly illustrated with more than 150 photographs from award-winning wildlife photographer Wayne Lynch, expert zoologist Kent A. Vliet introduces readers to the biology, ecology, and natural history of the American alligator. Sharing nuanced depictions of their hidden lives that will forever change the way you think of these giant reptiles, the book • combines captivating storytelling with the most current scientific facts • chronicles

the life cycle of the alligator • explains why the alligator's precise anatomy and physiology make it so successful • covers a wide range of topics, from courtship and reproduction to communication, basking, nest-building, and hunting • reveals the alligator's sophisticated social life in detail • evaluates the alligator's environmental role as a keystone species • examines the complicated relationship between alligators and people

This book was created to help teachers as they instruct students through the Master's Class Chemistry course by Master Books. The teacher is one who guides students through the subject matter, helps each student stay on schedule and be organized, and is their source of accountability along the way. With that in mind, this guide provides additional help through the laboratory exercises, as well as lessons, quizzes, and examinations that are provided along with the answers. The lessons in this study emphasize working through procedures and problem solving by learning patterns. The vocabulary is kept at the essential level. Practice exercises are given with their answers so that the patterns can be used in problem

solving. These lessons and laboratory exercises are the result of over 30 years of teaching home school high school students and then working with them as they proceed through college. Guided labs are provided to enhance instruction of weekly lessons. There are many principles and truths given to us in Scripture by the God that created the universe and all of the laws by which it functions. It is important to see the hand of God and His principles and wisdom as it plays out in chemistry. This course integrates what God has told us in the context of this study. Features: Each suggested weekly schedule has five easy-to-manage lessons that combine reading and worksheets. Worksheets, quizzes, and tests are perforated and three-hole punched — materials are easy to tear out, hand out, grade, and store. Adjust the schedule and materials needed to best work within your educational program. Space is given for assignments dates. There is flexibility in scheduling. Adapt the days to your school schedule. Workflow: Students will read the pages in their book and then complete each section of the teacher guide. They should be encouraged to complete as many of the activities and projects as possible as well. Tests are given at regular intervals with space to record each grade. About the Author: DR. DENNIS ENGLIN earned his bachelor's from Westmont College, his master of science from California State University, and his EdD from the University of Southern California. He enjoys teaching animal biology, vertebrate biology, wildlife biology, organismic biology, and astronomy at The Master's University. Born a slave, Harriet Tubman dreamed of freedom. And through hard work and her willingness to risk everything-including her life-she was able to make that dream come true. But after making her escape, Harriet realized that her own freedom was not enough. So she became a conductor on the Underground Railroad, and devoted her life to helping others make the journey out of bondage. An invisible threat to plantation owners, she served as a symbol of strength and inspiration for her people. She was the legendary "Moses," delivering hundreds from the desert of slavery. With indisputable narrative skill, Ann Petry recreates the life of a woman of great strength, bravery, and unshakeable moral fiber.

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of

Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Part of the Legend Classics series As Gregor Samsa awoke one morning from uneasy dreams he found himself transformed in his bed into a gigantic insect. The Metamorphosis - the masterpiece of Franz Kafka - was first published in 1915 and is one of the seminal works of fiction of the twentieth century. The novel is cited as a key influence for many of today's leading authors; as Auden wrote: "Kafka is important to us because his predicament is the predicament of modern man". Traveling salesman, Gregor Samsa, wakes to find himself transformed into a large, monstrous insect-like creature. The cause of Gregor's transformation is never revealed, and as he attempts to adjust to his new condition he becomes a

burden to his parents and sister, who are repelled by the horrible, verminous creature Gregor has become. A harrowing, yet strangely comic, meditation on human feelings of inadequacy, guilt, and isolation, *The Metamorphosis* has taken its place as one of the most widely read and influential works of twentieth-century fiction. The Legend Classics series: *Around the World in Eighty Days*, *The Adventures of Huckleberry Finn*, *The Importance of Being Earnest*, *Alice's Adventures in Wonderland*, *The Metamorphosis*, *The Railway Children*, *The Hound of the Baskervilles*, *Frankenstein*, *Wuthering Heights*, *Three Men in a Boat*, *The Time Machine*, *Little Women*, *Anne of Green Gables*, *The Jungle Book*, *The Yellow Wallpaper and Other Stories*, *Dracula*, *A Study in Scarlet*, *Leaves of Grass*, *The Secret Garden*, *The War of the Worlds*, *A Christmas Carol*, *Strange Case of Dr Jekyll and Mr Hyde*, *Heart of Darkness*, *The Scarlet Letter*, *This Side of Paradise*, *Oliver Twist*, *The Picture of Dorian Gray*, *Treasure Island*, *The Turn of the Screw*, *The Adventures of Tom Sawyer*, *Emma*, *The Trial*, *A Selection of Short Stories by Edgar Allen Poe*, *Grimm Fairy Tales*

Being healthy is much more than being physically fit and free from disease. Health is the state of well-being in which all of the components of health -- physical, emotional, social, mental, spiritual, and environmental -- are in balance. To be truly healthy, you must take care of all six components. - p. 11.
