Now in its 19th edition, this comprehensive directory details companies active in multimedia, which continues to evolve alongside the industry that it tracks. The text contains details of approximately 16,000 companies. Entries include company descriptions and classifications by activity, sector, platform, product type, size, turnover and more. The database section is indexed. This year articles from industry leaders and shapers, as well as interviews with heads of trend-setting companies and a round-up of statistics, should make this a useful item for professionals in the industry, and those who purchase multimedia professionally.

An important part of a national food control system is the capability for the analytical laboratory service to detect and quantify food contaminants such as residues of pesticide chemicals. This manual is a practical handbook on the analysis of foods for pesticide residue contamination. Its ultimate aim is to assure that a food control laboratory produces high quality analytical results using analytical methodology which has been shown to be reliable and reproducible for pesticide residue analyses. It includes discussions of sample handling techniques as well as many suggested analytical methods of choice to isolate qualitatively or quantitatively both pesticide chemical and industrial chemical contamination in food. The sample handling discussions cover the composition, preparation, extraction, clean-up and separation techniques for analysis of foods and varied matrices. The analytical methods are those for determination and confirmation of residues in foods. They are offered in an array which allows the determination of groups of like residues in broad multi-residue detection. Individual residue methods are suggested for singular residue needs.

Accessibility and Acceptability in Technical Manuals is written for an audience with

a general interest in readability studies, linguistics and technical writing. With the main emphasis on technical manuals the book is primarily targeted at those who have a special interest in the design and use of utility texts and how these texts are received and understood by a multifaceted audience. Accessibility is not a new research area and many explanations have been offered over the past years as to why non-experts often have difficulties in comprehending texts written by technological experts. This book offers a new approach to accessibility studies by exploring not only style, but also attitudes to style, by asking text consumers which style they prefer for different parts of the manual. A key role is played by the Systemic Functional Linguistics' notion of grammatical metaphor, a stylistic choice that is commonly used in technical literature. Grammatical metaphor — although apparently obstructing the comprehension process of some readers — is a common element in the preferred style that separates the 'insiders' from the 'outsiders'. An explanation of this rather surprising result is offered by resorting to Critical Discourse Analysis.
