Controversial Issues In Environmental Policy

E-Learning offers many opportunities for individuals and institutions all over the world. Individuals can access to education they need almost anytime and anywhere they are ready to. Institutions are able to provide more cost-effective training to their employees. E-learning context is very important. It is common to find educators who perceive e-learning as internet-only education that encourages a static and content-focused series of text pages on screen. Others envisage the shallow and random online messages that are typical of a social real-time chat session, and wonder how that type of communication could add any value to academic discourse. Some may have experienced e-learning done poorly, and extrapolate their experience into a negative impression of all e-learning. The book will examine the emergence and growth of e-learning. The use of the "e" prefix indicates the application of information and communication technology (ICT) in government, finance, and all forms of socio-economic and community development. This eBook is designed and presented in two volumes. The first volume consists of the country cases of Algeria, Belarus, Bulgaria, Egypt, Estonia, Finland, Greece, Jordan, Hungary, Iraq, Iran, Israel, Kazakhstan, Kyrgyzstan, Latvia, Lithuania, Macedonia, Moldova, and Morocco. The second volume gives a place to the country cases of Norway, Oman, Palestine, Poland, Romania, Russia, Saudi Arabia, Serbia, Slovakia, Slovenia, Sweden, Syria, Tajikistan, Tunisia, Turkey, Ukraine, United Arab Emirates and Uzbekistan. So, the book consists of more than

70 authors from 39 different countries and from 42 universities and 14 institutions with company for all 42 chapters. (Individual chapters contain references.) ["Cases on Challenges Facing E-Learning and National Development: Institutional Studies and Practices. Volume II" was co-edited by Leena Vainio, Mehmet Can Sahin, Gulsun Kurubacak, Petri T. Lounaskorpi, S. Raja Rao, and Carlos Machado. For Volume I, see ED508217.].

Green Education: An A-to-Z Guide explores the environmental movement's proliferation in the field of education, from elementary school classroom efforts to the university curriculum to building sustainable campuses. Focusing on the critical role of education in building a sustainable future, approximately 150 signed entries, written by scholars and experts in a variety of disciplines, examine school and college courses in green education, the structures of educational institutions, the challenges of reducing their ecological footprint, administrative policies, green campus organizations, and student and faculty participation. Vivid photographs, searchable hyperlinks, numerous cross references, an extensive resource guide, and a clear, accessible writing style make the Green Society volumes ideal for classroom use as well as for research.

A step-by-step guide connecting theory to practice Environmental Conflict Management introduces students to the research and practice of environmental conflict and provides a step-by-step process for engaging stakeholders and other interested parties in the management of environmental disputes. In each chapter, authors Dr. Tracylee Clarke and Dr. Tarla Rai Peterson first introduce a specific concept or process step and then provide exercises, worksheets, role-plays, and brief case studies so students can directly apply what they are learning. The appendix includes six additional extended case studies for further analysis. In addition to providing practical steps for understanding and managing conflict, the text identifies the most relevant laws and policies to help students make more informed decisions. Students will develop techniques for public involvement and community outreach, strategies for effective meeting management, approaches to

negotiating options and methodologies for communicating concerns and working through differences, and outlines for implementing and evaluating strategies for sustaining positive community relations.

The Birth of Plenty: How the Prosperity of the Modern World was Created

FROM THE BESTSELLING AUTHOR OF THE INTELLIGENT ASSET ALLOCATOR Praise for *The Birth of Plenty*: "Bill Bernstein has given us a compact and immensely readable economic, political, military, and institutional history of our civilization that is a tour de force. Put everything else down. Take a deep breath. Open *The Birth of Plenty*. And prepare to be amazed. --John C. Bogle, Founder and Former CEO, The Vanguard Group "The Birth of Plenty is a brilliantly written, whirlwind account of how the modern world was formed. It is a hugely enjoyable read, full of vigor and liveliness, and a book every American should possess--at least those who treasure our abundant life and care about our future." --William Schultheis, Author, *The Coffeehouse Investor* "Put simply, this is my favorite economic history book. It gathers what is interesting about economic history to draw important lessons." --Ed Tower, Professor of Economics, Duke University "William Bernstein scrutinizes the research literature, distills it with originality and insight, then shares the results with classic Bernstein clarity and wit. Ideologues on both political wings should

prepare to have their assumptions challenged." --Bernard Sherman, Host, Talk of Iowa - Focus on Finance radio show A daring look at the development of human prosperity--how it was created, and where it's headed In the breakthrough spirit of Against the Gods, William Bernstein's The Birth of Plenty has the topical uniqueness and storytelling panache to literally create its own category and reader. Based upon the premise that mankind experienced virtually zero economic growth from the dawn of time until 1820, this provocative, bigpicture book identifies the four conditions necessary for sustained economic progress--property rights, scientific rationalism, capital markets, and communications and transportation technology-- and then analyzes their gradual appearance and impact throughout every corner of the globe. Filled with bestselling author William Bernstein's trademark meticulous research and page-turning writing style, The Birth of Plenty explores: Where the world economy could be headed next Implications of the book's thesis for today's society How the absence of one or more of the conditions continues to threaten beleaguered regions Rare is the book that proposes an entirely new premise, validates that premise with inarguable research and analysis, and then explains beyond question both the relevance and the implications of its premise to the reader and the world at large. The Birth of Plenty is just such a book. From its unique, topical subject matter to its tremendous review potential, this insightful book will be one of the most talked-about volumes of the publishing season.

Brilliant River

This book is the result of 14 years of collecting Entolomataceae in the native forests of Tasmania, Australia. Although initially involving only the Tasmanian residents Genevieve Gates and David Ratkowsky, who made twice- or thrice-weekly forays into the forests throughout the year, the project was subsequently joined by agaric specialist Machiel Noordeloos from the Netherlands, and by fungi photographer Michael Pilkington from the United Kingdom. The international character of the project is further evidenced by the earlier contributions of American mycologist Tim Baroni to the Tasmanian *Rhodocybe* species which form the basis of the chapter on the now-expanded concept of *Clitopilus*, and a visit of several months in 2010 by Brazilian Ph.D. candidate Fernanda Karstedt, who tested the keys to the *Entoloma* species. Consequently, several thousand well-annotated collections were found during this inventory and form the basis of this monographic treatment of the *Entoloma* and *Clitopilus* of Tasmania. The resulting 90 *Entoloma* species and 10 *Clitopilus* species are well documented with standardized descriptions, line drawings of fruit bodies and diagnostic microscopic characters, and, when available, with colour photographs. Thanks to the intensive search, it was possible to illustrate most species in colour. Dichotomous keys facilitate identification of the species. The species concept used is morphologically based; in several cases, however, identification to species level is supported by molecular data.

Most controversies in environmental policy are rooted in clashes of values involving science and technology versus humanism, economic efficiency versus humanism, the role of nature in society and the role of government in society. The author discusses how America makes environmental policy - at the Federal and State levels as well as their enforcement agencies designed to protect and regulate at the same time. Portney examines legislation, public opinion, implementation or non-implementation relative to the debates over water, air and soil management.

How has the world coped with past energy crises? In this volume, Marcus reveals both the shortcomings and failures and the surprising successes of past efforts. With the decline of the Cold War, energy policy issues are among the most important factors in world politics. Energy policies provide a new context for the evolution of other internationally significant policies; namely, global trade, new Eastern European economies and emerging environmental issues. Introducing energy issues by reviewing events which transpired in the Persian Gulf after August 1990, Marcus then examines trends in energy production and consumption.

worldwide since the first energy supply crisis of 1973. Ensuing chapters discuss the economics and the politics of energy polic

Natural disasters are more common now than they have been ever before. Globally, climates are changing and natural hazards are becoming routine. This book is a study of natural hazards and how they turn into disasters—with a focus on Asian countries. It takes a holistic view of the subject and discusses different concepts of disaster management to understand both theory as well as practice. The book also explains best practices and the most effective tools for alleviating the consequences of such disasters. This study provides insight into the impact of natural disasters on human life, infrastructure, and economy and analyzes mitigation strategies with reference to numerous case studies. It also outlines the policies and laws that govern disaster management in India and abroad.

Accessibly written by a team of international authors, the Encyclopedia of Environmental Change provides a gateway to the complex facts, concepts, techniques, methodology and philosophy of environmental change. This three-volume set illustrates and examines topics within this dynamic and rapidly changing interdisciplinary field. The encyclopedia includes all of the following aspects of environmental change: Diverse evidence of environmental change, including climate change and changes on land and in the oceans Underlying natural and anthropogenic causes and mechanisms Wide-ranging local, regional and global impacts from the polar regions to the tropics Responses of geo-ecosystems and human-environmental systems in the face of past, present and future environmental change Approaches, methodologies and techniques used for reconstructing, dating, monitoring, modelling, projecting and predicting change Social, economic and political dimensions of environmental issues, environmental conservation and management and environmental policy Over 4,000 entries explore the following key themes and more: Conservation Demographic change Environmental management Environmental policy Environmental security Food security Glaciation Green Revolution Human impact on environment Industrialization Landuse change Military impacts on environment Mining and mining impacts Nuclear energy Pollution Renewable resources Solar energy Sustainability Tourism Trade Water resources Water security Wildlife conservation The comprehensive coverage of terminology includes layers of entries ranging from one-line definitions to short essays, making this an invaluable companion for

any student of physical geography, environmental geography or environmental sciences.

Environmental Choices

This book combines several ideas and philosophies and provides a detailed discussion on the value addition of fruits, vegetables, spices, plantation crops, floricultural crops and in forestry. Separate chapters address the packaging, preservation, drying, dehydration, total quality management and supply chain management of horticultural crops. The book explains value addition as a process of increasing the economic value and consumer appeal of a commodity with special reference to horticultural crops. Each chapter focuses on a specific area, exploring value addition as a production/ marketing strategy driven by customer needs and preferences. But, as such, it is also a more creative field, calling for more imagination than calculated, routine work. Value is added to the particular produce item when the product is still available when the season is out and the demand for the product exceeds the available supply. Value addition is an important factor in the growth and development of the horticultural sector, both in India and around the world. But very little information is available on this particular aspect of horticulture. Albert Einstein famously said, "Try not to become a man of success, but rather try to become a man of value." This message is not only true for those people who want to make more of themselves, but also for those who

want their creation or product in any form to excel. And it certainly applies to horticultural crops, which are extremely perishable. It is true that loss reduction is normally less costly than equivalent increases in production. The loss of fresh produce can be minimized by adopting different processing and preservation techniques to convert the fresh vegetables into suitable value-added and diversified products, which will help to reduce the market glut during harvest season. Value-added processed products are products that can be obtained from main products and by-products after some sort of processing and subsequently marketed for an increased profit margin. Generally speaking, value-added products indicate that for the same volume of primary products, a higher price is achieved by means of processing, packing, enhancing the quality or other such methods. The integrated approach from harvesting to the delivery into the hands of the consumer, if handled properly, can add value to fresh produce on the market. But most of the fresh produce has a limited life, although it can be stored at appropriate temperature and relative humidity for the same time. If such produce is processed just after harvesting, it adds value and stabilizes the processed products for a longer time. Preparing processed products will provide more variety to consumers and improve the taste and other sensory properties of food. This will also promote their fortification with nutrients that are lacking in fresh produce. By adopting suitable methods for processing and value addition, the shelf life of fresh produce can be increased manifold, which supports their availability year-round to a wider spectrum of consumers on both the domestic and international market.

With increased urbanization, rising middle class purchasing power, changing food habits and a decline in making preserved products in individual homes, there is now a higher demand for industry-made products on the domestic market. In spite of all these aspects, only 1-2.2% of the total produce is processed in developing countries, as compared to 40-83% in developed countries. The horticultural export industry offers an important source of employment for developing countries. For instance, horticulture accounts for 30% of India's agricultural GDP from 8.5% of cropped area. India is the primary producer of spices, second largest producer of fruits and vegetables and holds a prominent position with regard to most plantation crops in the world. The cultivation of horticultural crops is substantially more labor-intensive than growing cereal crops and offers more post-harvest opportunities for the development of value-added products. This book offers a valuable guide for students of horticulture, as well as a comprehensive resource for educators, scientists, industrial personnel, amateur growers and farmers.

Cases on Challenges Facing E-Learning and National Development

It is impossible to ignore the connection between economic development and ecological sustainability—overwhelming scientific evidence points to anthropogenic pressures slowly destroying life on Earth. The need for corrective

action is, therefore, critical. This edited compilation studies the processes that are causing irreversible changes in the Earth's systems. It dwells primarily on the change in the ecosystems that sustain human beings and examines the drivers, direction, and magnitude of global change. The book not only studies the methods that enhance the reader's understanding of the impact of global change but also discusses mitigation strategies. The emphasis is on sustainability in a framework of development, with special attention to equity.

Written just after the passing of the 1924 Immigration Act, this book by one of America's most prominent racial thinkers is an in-depth analysis of the racial developments which led to the American Revolution, the Civil War and the mass immigration of the late nineteenth century which disrupted the until-then almost entirely North-Western European colonization of North America. Delighted that the

1924 law effectively stopped all further mass migration, Stoddard devoted the rest of this work to discussing solutions to what he called the existing "racial dilemmas" facing America, namely the threat of illegal Mexican immigration, the growth in black numbers and unassimilable European immigrants. Although the 1924 act was repealed in the 1960s, this book contains many observations on race and the implications of mass migration which are more applicable than ever before.

The Sudan Political Service

Within a federal system, government agencies and regulatory policies can be fractured -- even at odds with each other. National actors share power with their counterparts in states and localities, as do presidents with Congressional leaders, and bureaucrats with judges. Understanding the broad economic and political contexts of environmental policymaking illuminates the motivations behind policy choices of various interested parties, from the National Park Service and the EPA to environmental activists and members of Congress. Rothenberg utilizes basic

economic ideas to provide, not only a fresh look at how the U.S. deals with environmental ills, but a way of thinking about policy making in general.

Re-Forging America: The Story of Our Nationhood

Green Issues and Debates explores the multitude of threats to sustainable life on earth and the myriad of controversies surrounding potential solutions. The grayer shades of green are deeply examined, including such heady questions as: Is ethanol production from corn a recipe for famine? Does offshore drilling pose more of a risk to the environment than the problem it solves? Is “clean coal” a viable option or is it simply polluting the energy dilemma? Are genetically modified foods helpful or harmful? Well-respected scholars present more than 150 articles presented in A-to-Z format focusing on issues brought to the forefront by the green movement with carefully balanced pro and con viewpoints. A valuable tool for students of all facets of ecology, the environment, and sustainable development, the volume fully engages the reader, inspiring further debate within the classroom. Vivid photographs, searchable hyperlinks, numerous cross references, an extensive resource guide, and a clear, accessible writing style make the Green Society volumes ideal for the classroom as well as for research.

Rumor and Reflection

Britain's Imperial Administrators, 1858-1966

This book is the first of its kind to chart the terrain of contemporary India's many place names. It explores different 'place connections', investigates how places are named and renamed, and looks at the forces that are remaking the future place name map of India. Lucid and accessible, this book explores the bonds between names, places and people through a unique amalgamation of toponomy, history, mythology and political studies within a geographical expression. This volume addresses questions on the status and value of place names, their interpretation and classification. It brings to the fore the connections between place names and the cultural, geographical and historical significations they are associated with. This will be an essential read for scholars and researchers of geography, law, politics, history and sociology, and will also be of interest to policy-makers, administrators and the reader interested in India.

Britain's famous overseas civil services - the Colonial Administrative Service, the Indian Civil Service and the Sudan Political Service - no longer exist as a major and sought-after career for Britain's graduates. In this detailed study the history of each service is presented within the framework of the need to administer an expanding empire. Close attention is paid to the methods of recruitment and

training and to the socio-educational background of the overseas administrators as well as to the nature of their work. The prestigious incumbents of Government House are revealingly examined. The impact of decolonisation on overseas officials and the kinds of 'second careers' which they took up are documented. This authoritative narrative history is enlivened by recourse to Service lore and anecdotes.

Introduction to the Algae

The proposed volume attempts to understand how forms of bio-innovation might be linked to the problem of poverty and its reduction through an inquiry into a number of empirical cases of present-day bio-innovations in Asia. Conditions and circumstances in countries like Cambodia, China, India, Korea, Nepal, Philippines, and Thailand are quite different and provide a mosaic of varied experiences in bio-innovation that include shrimp farming, GMO cotton, bio gas, organic farming, and vaccines. Offering important insights into various forms of bio-innovation efforts and their effects on poverty alleviation, this volume is divided into three major themes that organize the main sections of the book—benefits for the poor: actual, direct, and prospective benefits for the poor; absence of positive impacts and institutional constraints; pro-poor drivers and embedding in anti-poverty alleviation. The central questions addressed here are:

- Ways and circumstances in which certain forms of bio-innovations affect the poor and enable poverty

alleviation. • Critical factors and conditions for improving the positive impact of bio-innovations on poverty alleviation. • Poverty alleviation goals should be the point of departure in rationalizing, identifying and designing appropriate and relevant bio-innovation programs.

Green Issues and Debates

Examining in detail the specific programmes and schemes launched by the government, Professor Kundu notes that the stipulations built into them to enable access by the poor are inadequate and superficial.

Green Politics

Our planet is growing hotter, which is mainly due to the burning of fossil fuels. Yet, most of us remain chained to the belief that there is no alternative source of energy sufficiently plentiful and cheap. Dawn of the Solar Age provides a blueprint for shifting the energy base of human civilisation out of fossil fuels and successfully reducing the concentration of greenhouse gases in the atmosphere. The author shows how the commercialisation of fully proven technologies—that can provide limitless amounts of renewable energy and entirely replace all fossil fuels—is being delayed to serve the purposes of dominant corporations and nations. He studies

the economic viability of these technologies and tells us how we can avert the imminent disaster that we face today. He concludes that the transition out of fossil fuels, though difficult, need not be too slow to prevent irreparable damage.
