The Nemesis File

Micromanufacturing and Nanotechnology is an emerging technological infrastructure and process that involves manufacturing of products and systems at the micro and nano scale levels. Development of micro and nano scale products and systems are underway due to the reason that they are faster, accurate and less expensive. Moreover, the basic functional units of such systems possess remarkable mechanical, electronic and chemical properties compared to the macro-scale counterparts. Since this infrastructure has already become the preferred choice for the design and development of next generation products and systems it is now necessary to disseminate the conceptual and practical phenomenological know-how in a broader context. This book incorporates a selection of research and development papers. Its scope is the history and background, underlying design methodology, application domains and recent developments.

Pemaquid Point Lighthouse

Pemaquid Point Lighthouse was first constructed in 1827 and still sends its beam out seventy-nine feet above sea level. Light keepers kept the lanterns burning from the 1820s through the 1930s, but they could not prevent every tragedy. Ships have crashed on the rocky shoals, taking sailors to their watery graves, while many others have been swept off the rocks by the powerful surf. Despite advances in technology and automation, the shore around the light remains a dangerous place. Author and historian Trudy Irene Scee uncovers the fascinating story of this iconic Maine lighthouse, its keepers and their families, from the construction of the first light through the present day.

Laws of Ascension

One of the most compelling, yet least-known, organizations devoted to American public outgrowth of the 18th-century Massachusetts Humane Society, it maintained lifeboat stations & beach patrols along the coasts of the United States to save & shelter shipwrecked sailors. In 1915, it merged with the Revenue Cutter Service & became the U.S. Coast Guard. Many of the physical structures of the service are still around; neglected for years, they are now seen as historic buildings, just as the lighthouses are. This book is a history of the USLSS. It covers such subjects as the formation of the service, surfboats & lifeboats, the equipment used, & the architecture of the stations. In addition, it provides a state-by-state survey, describing the histories of the individual stations & relating many of the spectacular rescues over the years. Most impressive are the hundreds of historical photos showing stations, personnel, lifeboats, shipwrecks, & more. This book provides perspective on coastal life in the 18th, 19th, & early 20th centuries, & makes fascinating reading.

The Self-Talk Solution

The Secret Astrology of the Bible by Michael Ledo is a landmark book that will change the way the scholarly community and the general public views the Bible, history and myth. Epic in scope, this provocative book explores the connections between religious belief and cosmic theory, even as it attempts to explain contradictions and irregularities in the text. The Bible, states Ledo, was constructed as a living document, with much of its text expanded as time went on. If readers stripped away this added material, they could actually be left with an Early Bronze Age text, over a thousand years older than what is currently accepted by scholars. This text, suggests Ledo, would be a veritable cosmic myth which follows the constellations with stories in a contiguous fashion that combine both history and myth. Originally sold as "On Earth as it is in Heaven, The Cosmic Roots of the Bible."

Once upon a time I was a complete idiot—too damn young and inexperienced and cocky to boot. And because of that, I messed up my chances with the woman I've always loved. Unrequited love is never easy, but it's a whole hell of a lot harder when it includes a successful business and a lifelong friendship. Even years after I blew my chance, I just can't let go of the feeling that Andi is the only one for me. I never want to see Andi hurt again, so when she comes down with a mysterious winter-related illness, all my protective instincts come creeping in. I've already lost this woman once, and I'll be damned if it happens again. Now I just need to make her see that we're worth a second chance—and if I need to let a little Christmas magic run its course to make that happen...well then, who am I to say that miracles don't exist?

Prevention and preparedness are the two basic approaches to maximize food security against any sort of tampering, whether natural, inadvertent or intentional. The NATO funded project "Tools for crop biosecurity" was designed to strengthen the cooperation among U.S., Europe and Israel in the field of crop biosecurity and to generate awareness on how the psychological, economic and cultural consequences of crop bioterrorism, especially attacks on soft targets such as crop seeds, could have a disproportionate adverse effect on Mediterranean agriculture and, more generally, on society. This book illustrates the achievements of the project originated from the workshops organized during the project itself taking in consideration main microbiological threads posed to crops, the tools to recognize and to control them, the needs for international cooperation and research funds to create networks which can face emerging risks for agriculture.
