A companion volume to the Worldwide Guide to Equivalent Irons and Steels, this reference book gives you the same complete coverage and identical format for nonferrous metals and alloys. completely updated and expanded from the previous edition, it's an absolute must if you're involved with materials specifying in any way. This comprehensive volume is well-indexed with easy to use cross references that make short work of looking up equivalents for a material specification or designation. It provides valuable composition tables and allows you to compare similar alloys. Tensile properties and product forms are provided when available. If you work in the international marketplace, it's especially ideal for identifying foreign specifications, finding similar alloys and verifying compositional limits. This book is organized by material group or class such as aluminum, copper, lead, magnesium, nickel, tin, titanium, and zinc. Each is further subdivided into groups, then finally into individual alloys. It's a must for metallurgists in design and manufacturing, materials producing companies, distributors and purchasing agents for metallic alloys, design and environmental engineers, academic and institutional libraries and information centres.

ISO 9001:2000: A start-to-finish implementation guide to the newly updated ISO standard from two of the world's leading quality practitioners! -- The realist's guide to ISO 9001:2000 -- internal audits, choosing registrars, ensuring customer focus, measuring results, and much more. -- Dell's Asset Recovery Business (ARB): A start-to-finish ISO 9001 case study, from the insiders who made it happen! -- Moving ISO 9001 from "cost center" to "profit center"! To maintain their ISO 9001 certifications, organizations worldwide must upgrade to the brand-new ISO 9001:2000 standard. In this book, two of the world's leading quality practitioners present the most realistic, business-focused guide to ISO 9001:2000 implementation. The book's focus isn't on mere "conformance: " it shows companies how ISO 9001:2000 can support their key strategic initiatives -- and how to move ISO 9001:2000 from "cost center" to "profit center." Tom Taormina and Keith Brewer cover every aspect of ISO 9001:2000, including the new process model; the latest and most effective internal auditing techniques; how to select a registrar; how to reflect the new standard's requirements for customer focus and management involvement; and much more. In a start-to-finish ISO 9001 case study, the authors show how Dell's Asset Recovery Business (ARB) has gone beyond mere "compliance, " leveraging ISO 9001:2000 standards to build a fully integrated business management system that uses continuous improvement models to drive operational excellence and profitability.

Proceedings of ASM International's 1993 Conference. In this volume, the papers describe real-world applications of putting composites to work. Once thought of as solutions in search of problems, many of these composites are being mainstreamed

into commercial applications. Nearly one-third of the book deals with physical and mechanical properties of ceramic matrix composites; other areas covered in detail are processing and characterization of intermetallic matrix composites and metal matrix composites; processing, fabrication and application of polymer matrix composites, fabrications of functionally gradient materials, and processing applications of carbon-carbon composites. Contributing authors hail from university, government and defense research facilities, as well as from aerospace companies across the country.

Pounder's *Marine Diesel Engines and Gas Turbines*, Tenth Edition, gives engineering cadets, marine engineers, ship operators and managers insights into currently available engines and auxiliary equipment and trends for the future. This new edition introduces new engine models that will be most commonly installed in ships over the next decade, as well as the latest legislation and pollutant emissions procedures. Since publication of the last edition in 2009, a number of emission control areas (ECAs) have been established by the International Maritime Organization (IMO) in which exhaust emissions are subject to even more stringent controls. In addition, there are now rules that affect new ships and their emission of CO<sub>2</sub>

measured as a product of cargo carried. Provides the latest emission control technologies, such as SCR and water scrubbers  
Contains complete updates of legislation and pollutant emission procedures Includes the latest emission control  
technologies and expands upon remote monitoring and control of engines
