Explore the Keywords Collaborative interactive website at keywords.nyupress.org According to the Oxford English Dictionary, a "keyword" is "a word that is of great importance or significance." On the web, "keywords" organize vast quantities of complex information. Keywords for American Cultural Studies offers these features

and more to its readers, providing indispensable meditations on terms and concepts used in cultural studies, American studies, and beyond. Collaborative in design and execution, *Keywords for American Cultural Studies* collects sixty-four new essays from interdisciplinary scholars, each on a single term such as "America," "body," "ethnicity," and "religion." Alongside "community," "immigration," "queer," and many others, these words are the nodal points in many of today's most dynamic and vexed discussions of political and social life, both inside and outside of the academy. Here are essays by scholars working in literary studies and political economy, cultural anthropology and ethnic studies, African American history and performance studies, gender studies and political theory. Some entries are explicitly argumentative, others are more descriptive. Throughout, readers will find clear, challenging, critically engaged thinking and writing. *Keywords for American Cultural Studies* provides an accessible A-to-Z survey of prevailing academic buzzwords, and a flexible tool for carving out new areas of inquiry. It is equally useful for college students who are trying to understand what their teachers are talking about, for general readers who want to know what's new in scholarly research, and for professors who just want to keep up. Contributors: Vermonja R. Alston, Lauren Berlant, Mary Pat Brady, Laura Briggs, Bruce Burgett, Christopher Castiglia, Russ Castronovo, Eva Cherniavsky, Krista Comer, Micaela di Leonardo, Brent Hayes Edwards, Robert Fanuzzi, Rod Ferguson, Shelley Fisher Fishkin, Elizabeth Freeman, Kevin Gaines, Rosemary Marangoly George, Kirsten Silva Gruesz, Sandra M. The Oxford Handbook of Evolutionary Family Psychology

The chapters in this volume take as their focus aspects of three of the languages of Scotland: Scots, Scottish English, and Scottish Gaelic. They present linguistic research which has been made possible by new and developing corpora of these languages: this encompasses work on lexis and lexicogrammar, semantics, pragmatics, orthography, and punctuation. Throughout the volume, the findings of analysis are accompanied by discussion of the methodologies adopted, including issues of corpus design and representativeness, search possibilities, and the complementarity and interoperability of linguistic resources. Together, the chapters present the forefront of the research which is currently being directed towards the linguistics of the languages of Scotland, and point to an exciting future for research driven by ever more refined corpora and related language resources.

Zuni Kin Terms

Keywords for Disability Studies aims to broaden and define the conceptual

framework of disability studies for readers and practitioners in the field and beyond. The volume engages some of the most pressing debates of our time, such as prenatal testing, euthanasia, accessibility in public transportation and the workplace, post-traumatic stress, and questions about the beginning and end of life. Each of the 60 essays in *Keywords for Disability Studies* focuses on a distinct critical concept, including “ethics,” “medicalization,” “performance,” “reproduction,” “identity,” and “stigma,” among others. Although the essays recognize that “disability” is often used as an umbrella term, the contributors to the volume avoid treating individual disabilities as keywords, and instead interrogate concepts that encompass different components of the social and bodily experience of disability. The essays approach disability as an embodied condition, a mutable historical phenomenon, and a social, political, and cultural identity. An invaluable resource for students and scholars alike, *Keywords for Disability Studies* brings the debates that have often remained internal to disability studies into a wider field of critical discourse, providing opportunities for fresh theoretical considerations of the field’s core presuppositions through a variety of disciplinary perspectives. Visit keywords.nyupress.org for online essays, teaching resources, and more.

Гласник Етнографског института

Relationships with family are important to our emotional health and can play a significant role in our social success. We need our families and yet frequently have a great difficulty understanding them. Hundreds of books have been published with the goal of improving understanding and relationships among family and relationships; few, if any, have done so with an evolutionary approach. The *Oxford Handbook of Evolutionary Family Psychology* focuses on the reasons underlying family behavior and how a greater understanding of these factors can help us to better understand our own family behaviors. Recognizing that a deeper understanding of human families can be found through an understanding of similar phenomena in other species, the volume demonstrates how an understanding of family ties can inform understanding of our relationships to non-kin.

Social Support Networks

The English and the Tamils spoke the same language and lived together in the past. Hundreds of words of everyday use are still essentially the same in the two languages.

Results of Recent Researches Carried Out Mostly Between 1990 and 1995, on the Social, Ecological, and Linguistic Aspects of the

Although the ancestral home of chelicerates was the sea, the vast majority of modern species live on land. Most students of spiders and mites also restrict themselves to terrestrial habitats. However, a surprising number of mites (Arachnida: Acari) have returned to a watery existence. Approximately 7000 species from the Mesostigmata, Astigmata, Oribatida, and especially the Prostigmata, now live in marine and freshwater habitats. In *Aquatic Mites*, a dozen

chapters explore the distribution, ecology, behavior, genetics, and evolution of the most diverse of these astonishing arachnids. The results of these studies raise as many interesting questions as they answer, and should provoke more investigations of the biology of freshwater and marine Acari.

Kinship, Contract, Community, and State

Humans organize systems of social ideas through structures of kinship. In Introduction to the Science of Kinship, Murray J. Leaf and Dwight Read describe what those ideas are, how they are used, and what this implies for the science of human social organization.

A Dictionary of Christ and the Gospels: Aaron-Knowledge

Publisher description

Anthropological Abstracts 9/2010

Anthropological Abstracts (AA) is a reference journal published once a year in print, but also under www.anthropology-online.de and announces - in English language - most publications in the field of cultural/social anthropology published in the German language area (Austria, Germany, Switzerland). Since many of these publications have been written in German, and most German publications are not included in the major English language abstracting services, Anthropological Abstracts offers a convenient source of information for anthropologists and social scientists in general who do not read German, to become aware of anthropological research and publications in German-speaking countries. Included are journal articles, monographs, anthologies, exhibition catalogs, yearbooks, etc. Most abstracts are authored by the editor, others are specified accordingly. This journal is edited by Ulrich Oberdiek since 1993 (formerly: Abstracts in German Anthropology; since 2002: Anthropological Abstracts).

American Anthropologist

Network Analysis and Ethnographic Problems

Resolving a decades long divide between what are often held to be incommensurate paradigms, Social Bonding & Nurture Kinship unites cultural and biological approaches to social life and kinship. The synthesis is non-reductive, respecting the core tenets of both paradigms, and also incorporates psychological attachment theory into the account. Praised by adherents of both perspectives, the work provides an exhaustive survey of the theoretical debates and empirical

findings across a wide array of disciplines, providing students of social behaviour and kinship with a rich and comprehensive resource. This work is a powerful example of how social and physical sciences can unite on equal terms, without the danger of one being subsumed by the other. Both approaches emerge stronger as a result. Early Reviews: • "Maximilian Holland gets to the heart of the matter concerning the contentious relationship between kinship categories, genetic relatedness and the prediction of behavior. If he had been in the debate in the 1980s then a lot of subsequent confusion could have been avoided." Robin Fox • "Max Holland has demonstrated extraordinarily thorough scholarship in his exhaustive review of the often contentious discussions of kinship. He has produced a balanced synthesis melding the two approaches exemplified in the biological and sociocultural behavioral positions. His work in reconciling opposing views clearly demonstrates the value of interdisciplinary approaches. This should be the definitive word on the subject." Irwin Bernstein • "A brilliant discussion of the relationship between kinship and social bonding as understood in evolutionary biology and in sociocultural anthropology." Kirk Endicott • "Unlike many commentators who have tackled kinship in the context of biology, Holland takes culture seriously and deals fairly with Schneider's arguments. He acknowledges, correctly in my opinion, that culture and biology are both important but are largely relevant to separate questions. This book helps to untangle a long-standing disciplinary muddle." Richard Feinberg

Kinship and Demographic Behavior in the Past

Kinship care is part tradition and part social welfare policy. Tradition and Policy Perspectives in Kinship Care examines the balance of the two perspectives and presents current practice challenges of formal and informal kinship care. This important resource focuses on both the needs of the caregiver as well as the impact of kinship care on children. Public policy issues related to kinship care are discussed in detail. This insightful book explores this crucial issue through the lens of social workers who fully understand the strengths and challenges of kinship care. Tradition and Policy Perspectives in Kinship Care discusses this issue from both micro and macro levels, explaining the outcomes of kinship based on variables such as the youth's and parent's outlook for the future, performance in school, welfare reform, domestic violence, respite care, spirituality, and involvement of nonbiological relatives. The book then focuses on the subject of grandparents as caregivers, examining their coping resources, effectiveness of programs serving them, and recommended changes to services to enhance their well-being. Topics in Tradition and Policy Perspectives in Kinship Care include: study examining the future outlook in African American kinship care families the effect of family disruption on a child's educational performance the impact of the Temporary Assistance to Need Families (TANF) legislation and future policy links between domestic violence and kinship care the role of spirituality and religion in kinship care a study on the needs of biological parents the impact of a grandparent's parenting responsibilities on his or her psychological well-being intergenerational communication kinship care in public housing examination of the factors that influence kinship care provided by African American grandfathers AARP study of grandparents raising grandchildren in the District of Columbia the KinNET project funded by the Children's Bureau for a national support network for kinship care providers Tradition and Policy Perspectives in Kinship Care is an

invaluable resource for social workers, counselors, child welfare agency administrators and practitioners, educators, and graduate students.

African Study Monographs

During the 2011 uprisings in the Arab world, protesters demanded the ouster of authoritarian forms of rule and an end to the influence of ruling families on politics, society, and the economy. These upheavals revealed that patrimonial power in its diverse forms is still a dynamic force in global politics, able to shape world events. This volume brings the study of patrimonialism back to center stage and presents the concept as a useful tool to analyze how nations, global developments, and international relations are influenced and transformed. Leading scholars show that patrimonial practices, present throughout history, are important features of global capitalist modernity. The authors analyze patrimonial politics in regions throughout the world, including in the United States, Tunisia, Chile, France, Iraq, Lebanon, Morocco, Poland, and Russia. This volume will appeal to students of politics and policy and to a multidisciplinary scholarly audience in political sociology, historical social science, history, and social theory.

Key Ideas in Human Thought

Cross-cultural in nature, the volume looks at relationships between women of different age groups in a village in Taiwan, a town in central Sudan, a rural setting in western Kenya, an Andean peasant community, a horticultural village in Melanesia, and an Aboriginal community in Australia. Adding an interspecies perspective is a study of two age groups of Japanese macaque monkeys. Included is an ethnographic bibliography that lists books with a wealth of information on women in sixty societies.

Tattoos on the Heart

Keywords in Evolutionary Biology

This is a most comprehensive and up-to-date bibliography of the theory, research, and practical application of social support networks. Containing approximately 2,700 references, it offers detailed listings for journal articles, books, book chapters, and published reports which appeared from 1983 to 1987. The literature represented in this bibliography includes a focus on theory, research, practice and policy drawn from these as well as other disciplines and lends itself to the transfer of ideas and practice across various branches of the social support intervention field.

Tradition and Policy Perspectives in Kinship Care

In science, more than elsewhere, a word is expected to mean what it says, nothing more, nothing less. But scientific discourse is neither different nor separable from ordinary language--meanings are multiple, ambiguities ubiquitous. Keywords in Evolutionary Biology grapples with this problem in a field especially prone to the

confusion engendered by semantic imprecision. Written by historians, philosophers, and biologists—including, among others, Stephen Jay Gould, Diane Paul, John Beatty, Robert Richards, Richard Lewontin, David Sloan Wilson, Peter Bowler, and Richard Dawkins—these essays identify and explicate those terms in evolutionary biology which, though commonly used, are plagued by multiple concurrent and historically varying meanings. By clarifying these terms in their many guises, the editors Evelyn Fox Keller and Elisabeth Lloyd hope to focus attention on major scholarly problems in the field—problems sometimes obscured, sometimes reveals, and sometimes even created by the use of such equivocal words. "Competition," "adaptation," and "fitness," for instance, are among the terms whose multiple meaning have led to more than merely semantic debates in evolutionary biology. Exploring the complexity of keywords and clarifying their role in prominent issues in the field, this book will prove invaluable to scientists and philosophers trying to come to terms with evolutionary theory; it will also serve as a useful guide to future research into the way in which scientific language works.

A Natural History of Associations

Anglo-Saxon Keywords

Journal of Anthropological Research

Since the publication of Philippe Ariès's book, *Centuries of Childhood*, in the early 1960s, there has been great interest among historians in the history of the family and the household. A central aspect of the debate relates the story of the family to implicit notions of modernization, with the rise of the nuclear family in the West as part of its economic and political success. During the past decade, however, that synthesis has begun to break down. Historians have begun to examine kinship -

the way individual families are connected to each other through marriage and descent - finding that during the most dynamic period in European industrial development, class formation, and state reorganization, Europe became a "kinship hot" society. The essays in this volume explore two major transitions in kinship patterns - at the end of the Middle Ages and at the end of the eighteenth century - in an effort to reset the agenda in family history.

Mecklermedia's Official Internet World

"This staff working paper describes some of the difficulties of spill response in the Arctic.¹ In the staff's view, response challenges in the Arctic are important for the Commission to consider in its recommendations for the future of offshore drilling. This paper provides background information regarding the status of offshore drilling in Arctic waters, identifies problems with responding to oil spills in Arctic waters, and highlights areas for further Commission inquiry with respect to Arctic drilling"--Page 1.

Intergenerational research is crucial in understanding long term demographic trends. This book examines the ways kinship affects demographic behavior, including mortality patterns to determine the influence of fertility patterns, the contribution of parents' longevity, and the affects of a family history of disease. It emphasizes the importance of studies that include and compare other factors

related to social organization with information on multi-generational families.

A Grammar of Atong

Keywords for Disability Studies

Father Boyle started Homeboy Industries nearly 20 years ago, which has served members of more than half of the gangs in Los Angeles. This collection presents parables about kinship and the sacredness of life drawn from Boyle's years of working with gangs.

Journal of Quantitative Anthropology

Using network visualization and the study of the dynamics of marriage choices, Network Analysis and Ethnographic Problems expands the theory of social practice to show how changes in the structure of a society's kinship network affect the development of social cohesion over time. Using the genealogical networks of a Turkish nomad clan, authors Douglas White and Ulla Johansen explore how changes in network cohesion are revealed to be indicative of key processes of social change. This approach alters in fundamental ways the anthropological concepts of social structure, organizational dynamics, social cohesion, marriage strategies, as well as the study of community politics within the dynamics of ongoing personal interaction.
