The #1 New York Times–bestselling author of the House of Night series presents stories of vampires and romance by today’s top authors! Claudia Grey delves into the history of Patrice, from her bestselling Evernight series, and her doomed affair with a mortal World War II soldier. Strange Angels author Lili St. Crow takes us to St. Mary’s Catholic prep school, where one disaffected girl can’t seem to stay away from the boy she believes killed her best friend. The author of the Wicked series, Nancy Holder reimagines Romeo and Juliet with an undead Romeo who’s waited centuries for his beloved Juliet’s return. Heather Brewer, author of The Chronicles of Vladimir Tod, tells the story of a girl who wakes up kidnapped and locked in a freezing basement with the boy she loves, facing a monster she doesn’t dare put a name to. Rachel Caine returns to the setting of her bestselling Morganville Vampires series, where the latest supernatural threat isn’t to the residents’ lives, but to Eve and Michael’s bond. And Shade author Jeri Smith-Ready introduces us to a gypsy community that harbors vampires, a girl caught between her family and her dreams, and the boy who gives up everything to help her . . . This collection features all-new stories starring dark, romantic heroes and heroines that will enrapture fans of vampire romance—plus an introduction by P. C. Cast.

Congressional Record

The integrity of knowledge that emerges from research is based on individual and collective adherence to core values of objectivity, honesty, openness, fairness,

accountability, and stewardship. Integrity in science means that the organizations in which research is conducted encourage those involved to exemplify these values in every step of the research process. Understanding the dynamics that support " or distort " practices that uphold the integrity of research by all participants ensures that the research enterprise advances knowledge. The 1992 report *Responsible Science: Ensuring the Integrity of the Research Process* evaluated issues related to scientific responsibility and the conduct of research. It provided a valuable service in describing and analyzing a very complicated set of issues, and has served as a crucial basis for thinking about research integrity for more than two decades. However, as experience has accumulated with various forms of research misconduct, detrimental research practices, and other forms of misconduct, as subsequent empirical research has revealed more about the nature of scientific misconduct, and because technological and social changes have altered the environment in which science is conducted, it is clear that the framework established more than two decades ago needs to be updated. *Responsible Science* served as a valuable benchmark to set the context for this most recent analysis and to help guide the committee's thought process. *Fostering Integrity in Research* identifies best practices in research and recommends practical options for discouraging and addressing research misconduct and detrimental research practices.

Say Hello to Your Incoming Class—They're Not Millennials Anymore Generation Z is rapidly replacing Millennials on college campuses. Those born from 1995 through 2010 have different motivations, learning styles, characteristics, skill sets, and social concerns than previous generations. Unlike Millennials, Generation Z students grew up in a recession and are under no illusions about their prospects for employment after college. While skeptical about the cost and value of higher education, they are also entrepreneurial, innovative, and independent learners concerned with effecting social change. Understanding Generation Z's mindset and goals is paramount to supporting, developing, and educating them through higher education. *Generation Z Goes to College* showcases findings from an in-depth study of over 1,100 Generation Z college students from 15 vastly different U.S. higher education institutions as well as additional studies from youth, market, and education research related to this generation. Authors Corey Seemiller and Meghan Grace provide interpretations, implications, and recommendations for program, process, and curriculum changes that will maximize the educational impact on Generation Z students. *Generation Z Goes to College* is the first book on

how this up-and-coming generation will change higher education.

Generation Z Goes to College

The Three Sector Solution

The Sermon on the Mount

At the end of the nineteenth century, North America suffered a catastrophic loss of wildlife driven by unbridled resource extraction, market hunting, and unrelenting subsistence killing. This crisis led powerful political forces in the United States and Canada to collaborate in the hopes of reversing the process, not merely halting the extinctions but returning wildlife to abundance. While there was great understanding of how to manage wildlife in Europe, where wildlife management was an old, mature profession, Continental methods depended on social values often unacceptable to North Americans. Even Canada, a loyal colony of England, abandoned wildlife management as practiced in the mother country and joined forces with like-minded Americans to develop a revolutionary system of wildlife conservation. In time, and surviving the close scrutiny and hard ongoing debate of

open, democratic societies, this series of conservation practices became known as the North American Model of Wildlife Conservation. In this book, editors Shane P. Mahoney and Valerius Geist, both leading authorities on the North American Model, bring together their expert colleagues to provide a comprehensive overview of the origins, achievements, and shortcomings of this highly successful conservation approach. This volume

- reviews the emergence of conservation in late nineteenth–early twentieth century North America
- provides detailed explorations of the Model's institutions, principles, laws, and policies
- places the Model within ecological, cultural, and socioeconomic contexts
- describes the many economic, social, and cultural benefits of wildlife restoration and management
- addresses the Model's challenges and limitations while pointing to emerging opportunities for increasing inclusivity and optimizing implementation

Studying the North American experience offers insight into how institutionalizing policies and laws while incentivizing citizen engagement can result in a resilient framework for conservation. Written for wildlife professionals, researchers, and students, this book explores the factors that helped fashion an enduring conservation system, one that has not only rescued, recovered, and sustainably utilized wildlife for over a century, but that has also advanced a significant economic driver and a greater scientific understanding of wildlife ecology. Contributors: Leonard A. Brennan, Rosie Cooney, James L. Cummins, Kathryn Frens, Valerius Geist, James R. Heffelfinger, David G. Hewitt, Paul R. Krausman, Shane P. Mahoney, John F. Organ, James Peek, William Porter, John Sandlos, James A. Schaefer

The New York Times bestselling author of *Better* and *Complications* reveals the surprising power of the ordinary checklist. We live in a world of great and increasing complexity, where even the most expert professionals struggle to master the tasks they face. Longer training, ever more advanced technologies—neither seems to prevent grievous errors. But in a hopeful turn, acclaimed surgeon and writer Atul Gawande finds a remedy in the humblest and simplest of techniques: the checklist. First introduced decades ago by the U.S. Air Force, checklists have enabled pilots to fly aircraft of mind-boggling sophistication. Now innovative checklists are being adopted in hospitals around the world, helping doctors and nurses respond to everything from flu epidemics to avalanches. Even in the immensely complex world of surgery, a simple ninety-second variant has cut the rate of fatalities by more than a third. In riveting stories, Gawande takes us from Austria, where an emergency checklist saved a drowning victim who had spent half an hour underwater, to Michigan, where a cleanliness checklist in intensive care units virtually eliminated a type of deadly hospital infection. He explains how checklists actually work to prompt striking and immediate improvements. And he follows the

checklist revolution into fields well beyond medicine, from disaster response to investment banking, skyscraper construction, and businesses of all kinds. An intellectual adventure in which lives are lost and saved and one simple idea makes a tremendous difference, *The Checklist Manifesto* is essential reading for anyone working to get things right.

The Checklist Manifesto

The North American Model of Wildlife Conservation

An emerging body of research suggests that a set of broad "21st century skills"-such as adaptability, complex communication skills, and the ability to solve non-routine problems-are valuable across a wide range of jobs in the national economy. However, the role of K-12 education in helping students learn these skills is a subject of current debate. Some business and education groups have advocated infusing 21st century skills into the school curriculum, and several states have launched such efforts. Other observers argue that focusing on skills detracts attention from learning of important content knowledge. To explore these issues, the National Research Council conducted a workshop, summarized in this

volume, on science education as a context for development of 21st century skills. Science is seen as a promising context because it is not only a body of accepted knowledge, but also involves processes that lead to this knowledge. Engaging students in scientific processes-including talk and argument, modeling and representation, and learning from investigations-builds science proficiency. At the same time, this engagement may develop 21st century skills. Exploring the Intersection of Science Education and 21st Century Skills addresses key questions about the overlap between 21st century skills and scientific content and knowledge; explores promising models or approaches for teaching these abilities; and reviews the evidence about the transferability of these skills to real workplace applications.

The Forgotten Depression

MCQs and EMQs in Surgery: A Bailey & Love Companion Guide

What did Jesus teach? Distilled from years of study and lecture, affirmed by nearly a million readers over the last fifty years, Emmet Fox's answer in *The Sermon on the Mount* is simple. The Bible is a "textbook of metaphysics" and the teachings of Jesus express--without dogma--a practical approach for the development of the soul and for the shaping of our lives into what we really wish them to be. For Fox, Jesus was "no sentimental dreamer, no mere dealer in empty platitudes, but the unflinching realist that only a great mystic can be." In his most popular work, Emmet Fox shows how to: Understand the true nature of divine wisdom. Tap into the power of prayer. Develop a completely integrated and fully expressed personality. Transform negative attitudes into life-affirming beliefs. Claim our divine right to the full abundance of life.

Congressional Record

"By the publisher of the prestigious *Grant's Interest Rate Observer*, an account of the deep economic slump of 1920-21 that proposes, with respect to federal intervention, "less is more." This is a free-market rejoinder to the Keynesian stimulus applied by Bush and Obama to the 2007-09 recession, in whose aftereffects, Grant asserts, the nation still toils. James Grant tells the story of

America's last governmentally-untreated depression; relatively brief and self-correcting, it gave way to the Roaring Twenties. His book appears in the fifth year of a lackluster recovery from the overmedicated downturn of 2007-2009. In 1920-21, Woodrow Wilson and Warren G. Harding met a deep economic slump by seeming to ignore it, implementing policies that most twenty-first century economists would call backward. Confronted with plunging prices, wages, and employment, the government balanced the budget and, through the Federal Reserve, raised interest rates. No "stimulus" was administered, and a powerful, job-filled recovery was under way by late in 1921. In 1929, the economy once again slumped--and kept right on slumping as the Hoover administration adopted the very policies that Wilson and Harding had declined to put in place. Grant argues that well-intended federal intervention, notably the White House-led campaign to prop up industrial wages, helped to turn a bad recession into America's worst depression. He offers the experience of the earlier depression for lessons for today and the future. This is a powerful response to the prevailing notion of how to fight recession. The enterprise system is more resilient than even its friends give it credit for being, Grant demonstrates"--

The Theory of Island Biogeography

High Mountain Conservation in a Changing World

This book provides case studies and general views of the main processes involved in the ecosystem shifts occurring in the high mountains and analyses the implications for nature conservation. Case studies from the Pyrenees are preponderant, with a comprehensive set of mountain ranges surrounded by highly populated lowland areas also being considered. The introductory and closing chapters will summarise the main challenges that nature conservation may face in mountain areas under the environmental shifting conditions. Further chapters put forward approaches from environmental geography, functional ecology, biogeography, and paleoenvironmental reconstructions. Organisms from microbes to large carnivores, and ecosystems from lakes to forest will be considered. This interdisciplinary book will appeal to researchers in mountain ecosystems, students and nature professionals. This book is open access under a CC BY license.

7 Steps to a Pain-Free Life

An Amazon Best History Book of 2019 "A splendid and beautifully written illustration of the tremendous importance public policy has for the daily lives of ordinary people." —Ryan Cooper, Washington Monthly Over the last generation, the United States has undergone seismic changes. Stable institutions have given way to frictionless transactions, which are celebrated no matter what collateral damage they generate. The concentration of great wealth has coincided with the fraying of social ties and the rise of inequality. How did all this come about? In *Transaction Man*, Nicholas Lemann explains the United States'—and the world's—great transformation by examining three remarkable individuals who epitomized and helped create their eras. Adolf Berle, Franklin Delano Roosevelt's chief theorist of the economy, imagined a society dominated by large corporations, which a newly powerful federal government had forced to become benign and stable institutions, contributing to the public good by offering stable employment and generous pensions. By the 1970s, the corporations' large stockholders grew restive under this regime, and their chief theoretician, Harvard Business School's Michael Jensen, insisted that firms should maximize shareholder value, whatever the consequences. Today, Silicon Valley titans such as the LinkedIn cofounder and venture capitalist Reid Hoffman hope "networks" can reknit our social fabric. Lemann interweaves these fresh and vivid profiles with a history of the Morgan Stanley investment bank from the 1930s through the financial crisis of 2008, while

also tracking the rise and fall of a working-class Chicago neighborhood and the family-run car dealerships at its heart. Incisive and sweeping, *Transaction Man* is the definitive account of the reengineering of America and the enormous impact it has had on us all.

Each new print copy includes Navigate 2 Advantage Access that unlocks a comprehensive and interactive eBook, student practice activities and assessments, a full suite of instructor resources, and learning analytics reporting tools. Designed for the undergraduate, introductory environmental science course, the thoroughly updated and redesigned tenth edition of *Environmental Science* continues to present a comprehensive, student-friendly introduction to contemporary environmental issues with an emphasis on sustainable solutions that meet social, economic, and environmental goals. This acclaimed book is the only text that explores the underlying causes of environmental problems and root-level solutions and presents both sides of many critical issues. Thought-provoking features throughout, including Critical Thinking Exercises, Key Concept and Spotlight on Sustainability boxes, Go Green tips, and Point/Counterpoint debates, along with the updated statistics and data of key issues, encourage readers to become much deeper and more critical thinkers. Current and highly relevant, the Tenth Edition discusses the challenges of the growing human population and resource depletion

and solutions that address these issues in a sustainable manner. The book also discusses nonrenewable and renewable energy options and their pros and cons, and provides expanded coverage of local, regional, national, and global environmental issues and sustainable solutions. This comprehensive text includes updated coverage of environmental economics, ecology, and the application of science and technology to environmental concerns. With a strong focus on sustainability and critical thinking, a topic the author introduced to the environmental science market, *Environmental Science, Tenth Edition* is an essential resource for students to understand the impact they have on the environment and ways that they can help solve them. With Navigate 2, technology and content combine to expand the reach of your classroom. Whether you teach an online, hybrid, or traditional classroom-based course, Navigate 2 delivers unbeatable value. Experience Navigate 2 today at www.jbllnavigate.com/2

Common Sense

Managing the Risks of Extreme Events and Disasters to Advance Climate Change Adaptation

This Intergovernmental Panel on Climate Change Special Report (IPCC-SREX)

explores the challenge of understanding and managing the risks of climate extremes to advance climate change adaptation. Extreme weather and climate events, interacting with exposed and vulnerable human and natural systems, can lead to disasters. Changes in the frequency and severity of the physical events affect disaster risk, but so do the spatially diverse and temporally dynamic patterns of exposure and vulnerability. Some types of extreme weather and climate events have increased in frequency or magnitude, but populations and assets at risk have also increased, with consequences for disaster risk. Opportunities for managing risks of weather- and climate-related disasters exist or can be developed at any scale, local to international. Prepared following strict IPCC procedures, SREX is an invaluable assessment for anyone interested in climate extremes, environmental disasters and adaptation to climate change, including policymakers, the private sector and academic researchers.

Amsco's Geometry

Groundbreaking new research shows that by grabbing hold of the three-step "loop" all habits form in our brains--cue, routine, reward--we can change them, giving us the power to take control over our lives. "We are what we repeatedly do," said Aristotle. "Excellence, then, is not an act, but a habit." On the most basic level, a habit is a simple neurological loop: there is a cue (my mouth feels gross), a routine (hello, Crest), and a reward (ahhh, minty fresh). Understanding this loop is the key

to exercising regularly or becoming more productive at work or tapping into reserves of creativity. Marketers, too, are learning how to exploit these loops to boost sales; CEOs and coaches are using them to change how employees work and athletes compete. As this book shows, tweaking even one habit, as long as it's the right one, can have staggering effects. In *The Power of Habit*, award-winning New York Times business reporter Charles Duhigg takes readers inside labs where brain scans record habits as they flourish and die; classrooms in which students learn to boost their willpower; and boardrooms where executives dream up products that tug on our deepest habitual urges. Full of compelling narratives that will appeal to fans of Michael Lewis, Jonah Lehrer, and Chip and Dan Heath, *The Power of Habit* contains an exhilarating argument: our most basic actions are not the product of well-considered decision making, but of habits we often do not realize exist. By harnessing this new science, we can transform our lives.

This collection of essays had its origins in a one-day workshop held in August 2015 at The Australian National University. Jointly convened by Dr John Butcher (ANZSOG) and Professor David Gilchrist (Curtin Not-for-profit Initiative) the purpose of the workshop was to bring together academic researchers, policy practitioners and thought leaders to address a variety of emerging issues facing policymakers, public sector commissioners, not-for-profit providers of publicly funded services, and businesses interested in opportunities for social investment. The workshop itself generated a great deal of interest and a 'baker's dozen' of contributors challenged and engaged a full house. The level of enthusiasm shown by the

audience for the subject matter was such that the decision to curate the presentations in the form of a book was never in doubt. The editors trust that this volume will vindicate that decision. At one time the state exercised a near monopoly in the delivery of social programs. Today, almost every important public problem is a three sector problem and yet we have little idea of what a high-performing three sector production system looks like. It is the editors' hope that this volume will provide a foundation for some answers to these important public policy questions.

The Northwestern Reporter

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared,

the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.
