A prophetic memoir by the activist who “articulated the intellectual foundations” (The New Yorker) of the civil rights and women’s rights movements. First published posthumously in 1987, Pauli Murray’s *Song in a Weary Throat* was critically lauded, winning the Robert F. Kennedy Book Award and the Lillian Smith Book Award among other distinctions. Yet Murray’s name and extraordinary influence receded from view in the intervening years; now they are once again entering the public discourse. At last, with the republication of this “beautifully crafted” memoir, *Song in a Weary Throat* takes its rightful place among the great civil rights autobiographies of the twentieth century. In a voice that is energetic, wry, and direct, Murray tells of a childhood dramatically altered by the sudden loss of her spirited, hard-working parents. Orphaned at age four, she was sent from Baltimore to segregated Durham, North Carolina, to live with her unflappable Aunt Pauline, who, while strict, was liberal-minded in accepting the tomboy Pauli as “my little boy-girl.” In fact, throughout her life, Murray would struggle with feelings of sexual “in-betweenness”—she tried unsuccessfully to get her doctors to give her testosterone—that today we would recognize as a transgendered identity. We then follow Murray north at the age of seventeen to New York City’s Hunter College, to her embrace of Gandhi’s Satyagraha—nonviolent resistance—and south again, where she experienced Jim Crow firsthand. An early Freedom Rider, she was arrested in 1940, fifteen years before Rosa Parks’ disobedience, for sitting in the whites-only section of a Virginia bus. Murray’s activism led to relationships with Thurgood Marshall and Eleanor Roosevelt—who respectfully referred to Murray as a “firebrand”—and propelled her to a Howard University law degree and a lifelong fight against “Jane Crow” sexism. We also read Betty Friedan’s enthusiastic response to Murray’s call for an NAACP for Women—the origins of NOW. Murray sets these thrilling high-water marks against the backdrop of uncertain finances, chronic fatigue, and tragic losses both private and public, as Patricia Bell-Scott’s engaging introduction brings to life. Now, more than thirty years after her death in 1985, Murray—poet, memoirist, lawyer, activist, and Episcopal priest—gains long-deserved recognition through a rediscovered memoir that serves as a “powerful witness” (Brittney Cooper) to a pivotal era in the American twentieth century.

The book addresses the sustainability of cities in the context of sustainability science and its application to the city boundary. In doing so it investigates all the components of a city on the basis of sustainability criteria. To achieve sustainability it is essential to adopt an integrated strategy that reflects all sectors within the city boundary and also address the four key normative concepts: the right to develop for all sections, social inclusion, convergence in living standards and shared responsibility and opportunities among sectors and sections. In this book, the individual chapters examine the nodes of sustainability of a city and thus essentially present a large canvas wherein all sustainability-relevant issues are interwoven. This integrative approach is at the heart of the book and offers an extensive, innovative framework for future research on cities and sustainability alike. The book also includes selected case studies that add to the reading and comprehension value of the concepts presented, ensuring a blend of theory and practical case studies to help readers better comprehend the principle of sustainability and its application.

The 650th anniversary of the foundation of Wingfield College was the occasion for a special two-day symposium marking the culmination of a three-year UEA-funded research project into the college and castle. The building projects of the late medieval aristocracy focused on their homes and the monasteries, churches or chantry foundations under their patronage where their family were buried and commemorated. This commemoration allowed a visual celebration of their achievements, status and lineage, the scale and prestige of which reflected on the fortunes of the family as a whole. Wingfield is explored in the context of both the actual building of the castle, chantry chapel and the college, and that of the symbolic function of these as a demonstration ion of aristocratic status. The contributions to this book examine many topics which have hitherto been neglected, such as the archaeology of the castle, which had never been excavated, the complex history of the college's architecture, and the detailed study of the monuments in the church. The latest techniques are used to reconstruct the college and castle, with a DVD to demonstrate these. And the context of the family and its fortunes are explored in chapters on the place of the de la Poles in fifteenth century history, as soldiers, administrators and potential claimants to the throne.

Municipal Solid Waste to Energy Conversion Processes

The 1970s and 1980s have been marked by turbulent times for certain portions of America's industrial base, as their dominance of many domestic and foreign markets has eroded. During such times of stress it is tempting to create scapegoats in order to rationalize shortcomings. Much is heard about the Japanese in this regard. How they have contributed to the deterioration of specific segments of American industry, how jobs in the U. S. are being lost to foreign competition, and how the resulting trade deficit will be the downfall of us all. Much of this rhetoric has been directed against the Japanese automobile manufacturers and the Japanese electronic industry, which has been accused of "dumping" product into the United States. It was not until Japan unveiled its plan to build the multi-billion dollar Kansai Airport project that Japanese restrictive bidding practices in their domestic construction market became headline news. Construction then became a popular subject for "Japan Bashing" and attention was focused on the activities of Japanese contractors around the world, and, more particularly, on their involvement in the U. S. construction market. Well, the Japanese construction companies are in the United States and have been for some time. They have been awarded many contracts for federal and municipal construction projects and they have negotiated a significant number of construction contracts in the private sector.

A trace element (TE) is a chemical element presented below ~ 0.1 wt. % and required in minute quantities to maintain proper physical functioning. TE analysis in clinical samples (plasma, urine, cerebro-spinal fluid, full-term placenta, hair, nails, buccal mucosa, semen, biopsy specimens) has received increasing attention. Based on 62 sources, current effort presents comparative knowledge about the attempts to accurately trace TE in clinical samples through Vis/NIR, PIXE, TXRF, GFAAS, ICP-MS. It informs the need for further research adjustments to reveal the reciprocal states of certain TE (Cu/Zn, Ca/Mg, Fe/ Pb) in correlation with their real-time counts in both maternal and neonatal umbilical cord plasma, and in relation to augmented oxidative stress. This would help to achieve consistency in interpreting obstetrical complications (preeclampsia, prematurity, or gestational diabetes). Generated hypotheses should target plausible mechanisms behind TE alterations and their stage-sensitive measures in gynecological cancer. New prospects are discussed in management and prognosis of endometriosis and premature ovarian failure (POF).

This book has been developed from its earlier and far less formal presentment as the proceedings of a symposium entitled The Biochemistry of S-Adenosylmethionine as a Basis for Drug Design that was held at the Solstrand Fjord Hotel in Bergen, Norway on June 30-July 4, 1985. The purpose of the symposium was to bring together scientists from various disciplines (biochemistry, pharmacology, virology, immunology, chemistry, medicine, and so on) to discuss the recent advances that have been made in our understanding of the biological roles of S adenosylmethionine (AdoMet) and to discuss the feasibility of utilizing AdoMet-dependent enzymes as targets for drug design. Thus the information provided herein will be of value not only to basic scientists involved in elucidating the role of AdoMet in biology, but also to medicinal chemists who are using this basic knowledge in the process of drug design. The volume should also be of interest to pharmacologists and clinicians involved in biological evaluation of potential therapeutic agents arising from the efforts of the biochemists and medicinal chemists. Each plenary speaker at the symposium was requested to submit a chapter reviewing recent contributions of their discipline to our base of knowledge about the biological role of AdoMet. Topics covered in this volume include protein and phospholipid methylations (Section A), nucleic acid methyl ations (Section B), the regulation of AdoMet, S-adenosylhomocysteine, and methylthioadenosine metabolism (Section C), clinical aspects of AdoMet (Section D), and the design, synthesis, and biological evaluation of trans methylation inhibitors (Section E).

Construction Equipment Management for Engineers, Estimators, and Owners

Energetic ion beam irradiation is the basis of a wide plethora of powerful research- and fabrication-techniques for materials characterisation and processing on a nanometre scale. Materials with tailored optical, magnetic and electrical properties can be fabricated by synthesis of nanocrystals by ion implantation, focused ion beams can be used to machine away and deposit material on a scale of nanometres and the scattering of energetic ions is a unique and quantitative tool for process development in high speed electronics and 3-D nanostructures with extreme aspect ratios for tissue engineering and nano-fluidics lab-on-a-chip may be machined using proton beams. This book will benefit practitioners, researchers and graduate students working in the field of ion beams and application and more generally everyone concerned with the broad field of nanoscience and technology.

As daring and defiant as Kirk Douglas journeying "20,000 Leagues Under the Sea," there's no stopping diver Hawk Ridley as he takes the plunge into a briny world of untold riches and danger. The Caribbean is a fortune hunter's dream, salted with the gold of galleons long ago claimed by the deep. Now Hawk's headed for the Windward Passage of Haiti to stake his claim. But a rival team has also picked up the scent, and they're willing to turn the sea red with blood to get to the gold first. Fighting off ruthless competitors is nothing new to Hawk but fighting off a beautiful woman is a different story. Is she an innocent stowaway or a seductive saboteur? Between the cool millions lying on the bottom of the ocean, and the boiling - hot race to grab it, Hawk's about to find the answer and make a discovery "Twenty Fathoms Down" that will blow you out of the water. When it came to research, Hubbard was not one to head for the library. He always went to the source - in this case a U.S. navy deep - sea diver who agreed to show him the ropes and the danger. Hubbard admits it was daunting - even frightening - but he returned from the experience with all the first - hand knowledge he needed to fathom the true nature of life and death underwater. Taking the Enlightenment and the feminist tradition to which it gave rise as its historical and philosophical coordinates, *Feminism and the Politics of Travel* After the Enlightenment explores the coincidence of feminist vindications and travel in the late eighteenth and nineteenth centuries, the way travel's utopian dimension and feminism's utopian ideals have

intermittently fed off each other in productive ways. Travel's gender politics is analyzed in the works of J.-J. Rousseau, Mary Wollstonecraft, Stéphanie-Félicité de Genlis, Germaine de Staël, Frances Burney, Flora Tristan, Suzanne Voilquin, Gustave Flaubert George Sand, Robyn Davidson, and Sara Wheeler.
