It's not just big choices that can radically change our lives—sometimes it's the small ones. Activating Happiness offers powerful, evidence-based strategies to help you conquer low motivation, nix negative moods, and defeat depression by actively making positive choices in small, everyday moments. If you have depression or just suffer from low mood and lack of motivation, you know that your life isn't going to change with one grand, sweeping gesture. But you can make important decisions every day—whether it's getting off the couch and going for a walk, signing up for a course in pottery or screenwriting, or just setting aside some time to meet and chat with a good friend over coffee. These little things won't change your life all at once. But over time, they will shape the way you live and see the world and keep you on a path to wellness. In Activating Happiness, you'll find solid strategies based in behavioral activation and acceptance and commitment therapy (ACT) to help you break the cycle of avoidance, guilt, shame, and hopelessness that can take hold

when you're feeling your lowest. Using this guide, you'll find little, doable ways to "show up" to your life, get the ball rolling, and start really feeling better, instead of just reassuring others. You'll learn to set healthy goals for your body like eating and sleeping well, as well as healthy goals for your mind. Most importantly, you'll discover how to view your life through the lens of your own deepest values, which will spark a commitment to real, lasting change. The best thing about change is that you can start anywhere. By building a life—moment by moment—of rewarding behaviors that correspond to your values, you have the recipe for getting and staying well at your fingertips. This book will guide your way.

The Guenther family appears to have originated in Switzerland. Members of the family converted to the Anabaptist movement and were forced to flee first to Moravia and later to the valley of the Vistula in Poland and west Prussia.

Eventually members of the family became Mennonites and moved to the Ukraine where a number of Germans were settling. One of the Guenthers to move there was Franz Günther (1827-1900) who married Maria Warkentin and was the father of six children. In 1878 Franz, Maria and four of their children immigrated to America. They settled in South Dakota where one of the children, Cornelius F. Guenther (1853-1934) married Eva Dürksen and was the father of fourteen children. Their many descendants live throughout the United States.

What makes us human? In recent decades, researchers have focused on innate tendencies and inherited traits as explanations for human behavior, especially in light of groundbreaking human genome research. The author thinks this trend is misleading. As he shows in great detail in this engaging, thought-provoking, and highly informative book, what makes our species unique is our marvelous ability to learn, which is an ability that no other primate possesses. In his exploration of human progress, the author reveals that the immensity of human learning has not been fully understood or examined. Evolution has endowed us with extremely versatile bodies and a brain comprised of one hundred billion neurons, which makes us especially suited for a wide range of sophisticated learning. Already in childhood, human beings begin learning complex repertoires—language, sports, value systems, music, science, rules of behavior, and many other aspects of culture. These repertoires build on one another in special ways, and our brains develop in response to the learning

experiences we receive from those around us and from what we read and hear and see. When humans gather in society, the cumulative effect of building learning upon learning is enormous. The author presents a new way of understanding humanness—in the behavioral nature of the human body, in the unique human way of learning, in child development, in personality, and in abnormal behavior. With all this, and his years of basic and applied research, he develops a new theory of human evolution and a new vision of the human being. This book offers up a unified concept that not only provides new ways of understanding human behavior and solving human problems but also lays the foundations for opening new areas of science.

Das Rheingold, Die Walküre, and Siegfried. Parsifal. Tristan und Isolde. Both revered and reviled, Richard Wagner conceived some of the nineteenth century's most influential operas—and created some of the most indelible characters ever to grace the stage. But over the course of his polarizing career, Wagner also composed volumes of essays and pamphlets, some on topics seemingly quite distant from the opera house. His influential concept of Gesamtkunstwerk—the “total work of

art”—famously and controversially offered a way to unify the different media of an opera into a coherent whole. Less well known, however, are Wagner’s strange theories on sexuality—like his ideas about erotic acoustics and the metaphysics of sexual difference. Drawing on the discourses of psychoanalysis, evolutionary biology, and other emerging fields of study that informed Wagner’s thinking, Adrian Daub traces the dual influence of Gesamtkunstwerk and eroticism from their classic expressions in *Tristan und Isolde* into the work of the generation of composers that followed, including Zemlinsky, d’Albert, Schreker, and Strauss. For decades after Wagner’s death, Daub writes, these composers continued to grapple with his ideas and with his overwhelming legacy, trying in vain to write their way out from Tristan’s shadow.

*Supernatural* premiered on September 14, 2005, on what was then called the WB Network. Creator Eric Kripke was inspired by Jack Kerouac’s *On The Road*, putting his heroes, brothers Sam and Dean Winchester, in a big black ’67 Impala and sending them in search of the urban legends that fascinated him. The series attracted a passionate fan base from the start and was described as a "cultural attractor" that tapped into the zeitgeist of the moment, reflecting global fears of terrorism with its themes of fighting unseen evil. The chemistry between the lead actors, Jared Padalecki and Jensen Ackles, contributed to the show’s initial success, and *Supernatural* found its niche when it combined demon-hunting adventures with a powerful relationship drama that explored the intense, complicated bond between the brothers. *Supernatural* is as much a story of familial ties, love, and loyalty as it is of "saving people, hunting things." Fan Phenomena: *Supernatural* explores the ongoing fascination and passion for a show that developed a relationship with fans through eight seasons and continues to have an impact on fan culture to the present day. Essays here explore the rich dynamic that has developed between fans and producers, actors, writers, directors, the show creator, and showrunners through online interactions on Twitter and Facebook, face-to-face exchanges at conventions, and representations of fandom within the show’s meta-episodes. Contributors also explore gender and sexuality in the show and in fan art; the visual dynamics, cinematography, and symbolism in the episodes as well as the fan videos they inspire; and the culture of influence, learning, and teaching in the series.

### **Personality**

Franco Albini's works of architecture and design, produced between 1930 and 1977, have enjoyed a recent revival but to date have received only sporadic scholarly attention from historians and critics of the Modern Movement. A chorus of Italian voices has sung his praises, none more eloquently than his protégé, Renzo Piano. Kay Bea Jones' illuminating study of selected works by Studio Albini will reintroduce his contributions to one of the most productive periods in Italian design. Albini emerged from the ideology of Rationalism to produce some of Italy's most coherent and poetic examples of modern design. He collaborated for over 25 years with Franca Helg and at a time when professional male-female partnerships were virtually unknown. His museums and installation motifs changed the way Italians displayed historic artifacts. He composed novel suspension structures for dwellings, shops, galleries and his signature INA pavilions where levity and gravity became symbolic devices for connoting his subjects. Albini clarified the vital role of tradition in modern architecture as he experimented with domestic space. His cohort defied CIAM ideologies to re-socialize postwar housing and speculate on ways of reviving Italian cities. He explored new fabrication technologies, from the scale of furniture to wide-span steel structures, yet he never abandoned the rigors of craft and detail in favor of mass-production. *Suspending Modernity* follows the evolution of Albini's most important buildings and projects, even as they reveal his apprehensive attitudes about the modern condition. Jones argues here that Albini's masterful use of materials and architectural expression mark an epic paradigm shift in the modern period.

This multidisciplinary edited collection turns the postcolonial critical gaze back on Europe itself, arguing that racism is alive and dangerously well and examining a variety of postcolonial criticism in order to understand a variety of racisms: those of false respect, reaction, and surveillance. *Racism Postcolonialism Europe* wisely suggests that all of these forms of postcolonial racism occur under the guise of representing the interests of the European people—which is a very different entity than the European population as a whole. This volume—which includes contributions from Griselda Pollock, Michel Wieviorka, and Philomena Essed—will be required reading for scholars and students of race, postcolonial studies, sociology, and cultural studies alike.

### **Little Sheep Gets Lost**

Recent developments in the global economy, such as the Greek budget crisis, have led to new focus on the role of Europe,

and in particular on the countries in Europe's south-eastern region. This new volume from a global set of contributors explores south-east Europe's present and future direction, placing it in the context of the history of the region since the end of the Second World War. Through an exploration of Europe's cultural and political economy, this volume argues that the south-east part of Europe is currently the most crucial component of Europe's future development. The book charts the post-World War Two 'evolution' of the continent, taking in such key turning points as the 1971 breakdown of the fixed exchange rate system, the breakdown of the Soviet Union in the 1990s, and the 2008 global financial collapse. In doing so, the book seeks to explain why and how the current events in south-east Europe and the Eastern Mediterranean can be seen as the weakest points in the wider capitalist system in Europe, and how the issues faced by these regions can provide insight into a possible re-design of European governance. Including a comprehensive editorial introduction, this timely and important book is fully up to date with recent global events, including the 2011 Arab Spring, and provides context and comparison with the countries in the EU.
