A comprehensive reference work: This looseleaf work is an authoritative compilation of methods for the detection of autoantibodies (Section A: Methods of Autoantibody Detection); the structure, function, and molecular and biochemical concepts of autoantigens (Section B: Autoantigens); and the clinical significance of measuring autoantibodies in patients with rheumatic, connective tissue and autoimmune diseases (Section C: Clinical Significance of Autoantibodies). This unique work brings together all the molecular and medical information - very difficult to retrieve otherwise - in ONE publication. The Editors and contributors are leading experts in the immunological, molecular biological, and clinical fields. The format of this looseleaf publication allows regular updating of data as well as inclusion of new advances in research on autoimmunity. Until now, the work (Basic work including Supplement 1) included Section A, and the larger part of Section B, both in an attractive and robust ringbinder. Audience: By nature and design of this exciting reference work, it is especially aimed at scientists, including immunologists, pathologists and molecular biologists, and clinical chemists, as well as clinicians specializing in rheumatic diseases and autoimmune disorders,

inflammation or clinical immunology. Supplement 2: This supplement primarily contains Section C (Clinical Significance of Autoantibodies). As in the other sections, the contents are presented in a consistently structured manner, beautifully illustrated with photos and schematic figures. Extensive literature references are provided. Also, this supplement includes an addition to Section B (Autoantigens), being chapter B.1.5: The Antigens Defined by Antikeratin Antibodies (AKA).

Thoroughly revised and updated, this pocket-sized manual is an adaptation of Topol's Textbook of Cardiovascular Medicine, Third Edition. The Third Edition of this best-selling manual follows the same structure as previous editions, using an outline format with key words and phrases highlighted in bold. The concise text provides easy access to the information needed to treat patients with cardiovascular disease and is appropriate for residents, fellows, practicing cardiologists, and nurse-practitioners. This latest revision presents updated clinical information and has eight new chapters, including obesity and metabolic syndrome, women and heart disease, and heart failure treatment.

The Essential Guide for Clinicians Who Prescribe and Inject BoNTs This is a detailed and practical guide to botulinum neurotoxin therapy (BoNT) and the wide range of applications for neurological and pain disorders. A unique reference source for new injectors and experienced clinicians alike, this indispensable manual provides information on dose, dilution, and indications for all four FDA-approved toxins in one handy text. Following a brief review of relevant pharmacology, the book provides product information and comparative distinctions between the four FDA-approved toxins (Botox[®], Myobloc[®], Xeomin[®], and Dysport[®]), along with indications and doses for FDA-approved conditions, guidance techniques, and common and emerging clinical applications. The heart of the book is an injection manual, organized anatomically and by condition and covering all applications for medical treatment. For each condition or site, information is provided on typical muscle pattern or muscle groups involved, dosing guidelines and dilution for the applicable toxins, number of injection sites, and potential risks and benefits. Targeting techniques are organized in table format for quick retrieval. Anatomic illustrations and cross-sections are provided to orient injectors and help identify optimal insertion points. An appendix with useful clinical rating scales is also included. Key Features: Presents state-of-the-art information about current indications for all four FDA-approved botulinum neurotoxins Compares and contrasts the four toxins along with common and emerging clinical
