This book covers the main ideas, methods, recent developments and applications of quantum-limit optical spectroscopy to quantum information, resolution spectroscopy, measurements beyond quantum limits, measurement of decoherence and entanglement. Quantum-limit spectroscopy lies at the frontier of current experimental and theoretical techniques, and is one of the areas of atomic spectroscopy where the quantization of the field is essential to predict and interpret the existing experimental results. Currently, there is an increasing interest in quantum and precision spectroscopy both theoretically and experimentally, due to a significant progress in trapping and cooling of single atoms and ions. This progress allows to explore in the most intimate detail the ways in which light interacts with atoms and to measure spectral properties and quantum effects with a large precision. Moreover, it allows to perform subtle tests of quantum mechanics on the single atom and single photon scale which were hardly even imaginable as "thought experiments" a few years ago.

volume of a comprehensive resource for the most current research on the influence insects have on humankind and on our endangered environment. With contributions from leading researchers and scholars on the topic, the text explores relevant topics including biodiversity in different habitats and regions, taxonomic groups, and perspectives. Volume Two offers coverage of insect biodiversity in regional settings, such as the Arctic and Asia, and in particular habitats including crops, caves, and islands. The authors also include information on historical, cultural, technical, and climatic perspectives of insect biodiversity. This book explores the wide variety of insect species and their evolutionary relationships. Case studies offer assessments on how insect biodiversity can help meet the needs of a rapidly expanding human population, and examine the consequences that an increased loss of insect species will have on the world. This important text: Offers the most up-to-date information on the important topic of insect biodiversity Explores vital topics such as the impact on insect biodiversity through habitat loss and degradation and climate change With its companion Volume I, presents current information on the biodiversity of all insect orders Contains reviews of insect biodiversity in culture and art, in the fossil record, and in agricultural systems Includes scientific approaches and methods for the study of insect biodiversity The book offers scientists, academics, professionals, and students a guide for a better understanding of the biology and ecology of insects, highlighting the need to sustainably manage ecosystems in an ever-changing global environment.

North Korea's brinkmanship diplomacy has continued to disturb the world with its seemingly reckless missile testing, as the country's leader, Kim Jong-Il, is rumored to be terminally ill with pancreatic cancer. North Korea appears to be in a state of serious internal crisis not only because its dictatorial system, albeit skillful and ruthless leadership, is inherently unstable, if not skillful and ruthless leadership, but also because the main pillar of Kim Jong-Il's legitimacy is rapidly eroding due to both mass starvations and the exodus of grassroots and mass exodus of the North Korean people into nearby regions. The main objective of this book is to explore the probability of North Korea's implosion, and second to search for a feasible way for Korean reunification as a possible consequence of a big bang event on the peninsula. The geopolitics of the Korean Peninsula is historically very complicated as Korea is bordered and surrounded by four big powers; namely, China, Russia, Japan, and the United States. Each country has its own varying degrees of political, economic, and military stakes with respect to the Korean Peninsula. Thus, the Land of the Morning Calm has remained divided since 1945 mainly as a result of the domain war among these super powers. As the North nears a turning point, however, there is a new possibility for the two Koreas to reunite if the international environments work in their favor, and if both countries are well prepared to assume reunification.

community during the General Strike. To raise funds for the soup kitchens feeding the miners and their starving families, Corrie wrote *In Time O' Strife* in 1926 whilst on strike himself, exposing the brutal lives of a family staring hunger and defeat in the face. Some 87 years later, Graham McLaren has adapted, designed and directed this rarely performed classic play. Created by Graham McLaren (*Men Should Weep*, *A Christmas Carol*), the production uses fragments of Corrie's other plays, poems and songs, celebrating his ability as a writer and his contribution to Scottish culture. This edition pairs Corrie's original text with the script created by McLaren's adaptation process.

Dragonflies and Damselflies documents the latest advances in odonate biology and relates these to a broader ecological and evolutionary research agenda. Despite being one of the smallest insect orders, dragonflies offer a number of advantages for both laboratory and field studies. In fact, they have been crucial to the advancement of our understanding of insect ecology and evolution. This book provides a critical summary of the major advances in these fields. Contributions from many of the leading researchers in dragonfly biology offer new perspectives and paradigms as well as additional, unpublished, data. The editor has carefully assembled a mix of theoretical and applied chapters (including those addressing conservation and monitoring) and achieves a balance of emerging and established research topics, providing suggestions for future study in each case. This accessible text is not about dragonflies per se but an essential source of

knowledge that describes how different sets of evolutionary and ecological principles/ideas have been tested on a particular taxon. It will therefore be suitable for graduate students and researchers in entomology, evolutionary biology, population and behavioural ecology, and conservation biology. Seminar paper from the year 2018 in the subject Business economics - Supply, Production, Logistics, grade: 1.6, , language: English, abstract: Quick Response Logistics is one of the most debated topics in logistics studies over the years because of its increasing role in reducing operational expenses. It is a supply chain management strategy that has been used by manufacturers, soft lines retailers, and general merchandise to minimize operating expenses, forced markdowns, and retail out-of-stocks all achieved by reduced response time. Most of the retailers and suppliers work together to respond quickly to the consumers needs as they are able to share point-of-sale scan data thus in a potential point to forecast the needs of their consumers now and in the future and more rapidly. Quick Response Logistics has proven advantageous in most of the industries across the globe for instance, in the apparel industries because they are able to achieve efficient consumer response. The concept of quick response logistics integrates inventory

### **Insect Biodiversity**

This book presents a broad view of the ecology and behavior of aquatic insects, raising awareness of this conspicuous and yet little known fauna that inhabits inland waterbodies such as rivers, lakes and streams, and is particularly abundant and diverse in tropical ecosystems. The chapters address topics such as distribution, dispersal, territoriality, mating behavior, parental care and the role of sensory systems in the response to external and internal cues. In the context of ecology, it discusses aquatic insects as bio indicators that may be used to assess environmental disturbances, either in protected or urban areas, and provides insights into how genetic connectivity can support the development of novel conservation strategies. It also explores how aquatic insects can inspire solutions for various problems faced by modern society, presenting examples in the fields of material science, optics, sensorics and robotics.
