The new European edition of Mankiw's bestselling and highly readable text communicates the theories and models of macroeconomics in a concise and accessible way, with real-world examples, discussions and case studies. The text is fully updated with extensive coverage of the global financial crisis and in particular its impact on European economies.

## **Modern Economic Theory (M.E.)**

Now firmly established as one of the leading economics principles texts in the UK and Europe, this exciting, new fifth edition of Economics by N. Gregory Mankiw (Harvard University) and Mark P. Taylor (Washington University), has been fully updated. Much revered for its friendly and accessible approach, emphasis on active learning, and unrivalled support resources, this edition also has an improved structure to ensure the text aligns even more closely with the latest courses. The new edition incorporates additional coverage of a number of key topics including heterodox theories in economics such as complexity theory; institutional economics and feminist economics; different theories in international trade; game theory; different measures of poverty; the 'flat Phillips curve'; and the future of the

European Union. This title is available with MindTap, a flexible online learning solution that provides students with all the tools they need to succeed including an interactive eReader, engaging multimedia, practice questions, assessment materials, revision aids, and analytics to help you track their progress.

### **International Economics**

International Economics, 13th Edition provides students with a comprehensive, up-to-date review of the field's essential principles and theory. This comprehensive textbook explains the concepts necessary to understand, evaluate, and address the economic problems and issues the nations of the world are currently facing, and are likely to face in the future. Balancing depth and accessibility, the text helps students identify the real-world relevance of the material through extensive practical applications and examples. The new, thoroughly-updated and expanded

edition provides students with a solid knowledgebase in international trade theory and policy, balance of payments, foreign exchange markets and exchange rates, open-economy macroeconomics, and the international monetary system. The text uniquely employs the same graphical and numerical model in chapters that cover the same basic concept, allowing students to recognize the relationship among the different topics without having to start with a new example each time. Clear, straightforward discussions of each key concept and theory are complemented by concrete, accessible, and relatable examples that serve to strengthen student comprehension and retention. Topics include the 'Great Recession,' the increase in trade protectionism, excessive volatility and large misalignments of exchange rates, and the impacts of resource scarcity and climate change to continued growth and sustainable development.

This book offers a full account of thermodynamic systems in chemical engineering. It provides a solid understanding of the basic concepts of the laws of thermodynamics as well as their applications with a thorough discussion of phase and chemical reaction equilibria. At the outset the text explains the various key terms of thermodynamics with suitable examples and then thoroughly deals with the virial and cubic equations of state by showing the P-V-T (pressure, molar volume and temperature) relation of fluids. It elaborates on the first and second laws of thermodynamics and their applications with the help of numerous engineering examples. The text further discusses the concepts of exergy, standard property changes of chemical reactions, thermodynamic property relations and fugacity. The book also includes detailed discussions on residual and excess properties of mixtures, various activity coefficient models, local composition models, and group contribution methods. In addition, the text focuses on vapour-liquid and other phase equilibrium calculations, and analyzes chemical reaction equilibria and adiabatic reaction temperature for systems with complete and incomplete conversion of reactants. key Features □ Includes a large number of fully worked-out examples to help students master the concepts discussed. □ Provides well-graded problems with answers at the end of each chapter to test and foster students' conceptual understanding of the subject. The total number of solved examples and end-chapter exercises in the book are over 600. □ Contains chapter

summaries that review the major concepts covered. The book is primarily designed for the undergraduate students of chemical engineering and its related disciplines such as petroleum engineering and polymer engineering. It can also be useful to professionals. The Solution Manual containing the complete worked-out solutions to chapter-end exercises and problems is available for instructors.

## **Advanced Microeconomic Theory**

### **Macro-Economic Theory**

Remarkable developments have taken place in the domain of political theory in the present age of liberalisation and globalisation. The concept of the nation-state has undergone a major change on account of the irresistible erosion of sovereignty in the internal and external spheres and the emergence of the model of a transnational state. Different models of state may be seen in the countries of the Third World. It has put a question mark on the future of the nation-state. The basic tenets of liberalism have been challenged by Neo-liberalism and Communitarianism with the result that now it is on the retreat. In the post-World War II period, the New Fabians had revised the tenets of Fabianism, but in the post-Cold War era it has been replaced by the Third Way. The pluralists had attacked the classical theory of sovereignty, but the neo-pluralists have given a new shape to it. The theme of political legitimacy has been revisited. The old concept of citizenship requires to be reinterpreted in the contexts of civic republicanism, multiculturalism and identity politics. It has happened with other themes as well which may be taken note of in the emergence of new topics like Neo-colonialism, Post-colonialism, Post-communism and the like. The task of a political scientist is to

comprehend and critically describe the underlying principles of political behaviour in their empirical as well as normative dimensions. Inter-disciplinary focus has become so popular now that the implications of the themes of various social sciences have penetrated into the domain of each other. The discipline of political science has become a study of 'power' and of 'struggle' for its sake at any level -- local, regional, national and international. In the light of these salient features, university courses have been modernised, and the author has done well to cover them in this work so as to adequately meet the requirements of students offering this course at the degree and postgraduate levels and of candidates preparing for competitive examinations.
