Through the eyes of an inventor of new markets,
Good Derivatives: A Story of Financial and
Environmental Innovation tells the story of how
financial innovation – a concept that is misunderstood

and under attack - has been a positive force in the last four decades. If properly designed and regulated, these “good derivatives” can open vast possibilities to address a variety of global problems. Filled with provocative ideas, fascinating stories, and valuable lessons, it will provide both an insightful interpretation of the last forty years in capital and environmental markets and a vision of world finance for the next forty years. As a young economist at the Chicago Board of Trade, Richard Sandor helped create interest rate futures, a development that revolutionized worldwide finance. Later, he pioneered the use of emissions trading to reduce acid rain, one of the most successful environmental programs ever. He will provide unique insights into the process of creating these new financial products. Covering successes and failures, the story describes the tireless process of inventing, educating and creating support for these new inventions in places like Chicago, New York, London, Paris and how it is unfolding today in Mumbai, Shanghai and Beijing. The book will tell the story of the creation of the Chicago Climate Exchange and its affiliated exchanges (European Climate Exchange, Chicago Climate Futures Exchange and Tianjin Climate Exchange, located in China). The lessons learned in these markets can play a critical role in effectively addressing global climate change and other pressing environmental issues. The author argues that market-based trading systems are a far more effective means of reducing pollutants than “command-and-control”. Environmental markets may ultimately help to find solutions to issues such as rainforest destruction, water problems and biodiversity threats. Written in an engaging, narrative

style, Good Derivatives will be of interest to both practitioners and general readers who want to better understand the creative process of financial innovation. In the middle of so much distrust of markets, it is also a recipe of how transparent, well-regulated markets can be a force for good in the environmental, health, and social areas.

The Moment of Truth

A complete, how-to-do-it guide to planning, programming, implementing, and trouble-shooting today's 1/2s pacemakers and other implantable

cardiac devices Edited by a team of leading clinician-educators this is a practical, go-to reference for trainees and clinical staff who are new to or less experienced with the programming and management of implantable devices. It distills device best-practices into a single, quick-reference volume that focuses on essential tasks, common pitfalls, and likely complications. Each chapter follows a hands-on, how-to-do-it approach that helps readers quickly master even the most challenging device-related tasks—such as programming and how to respond confidently when complications arise. Today’s pacemakers and other implantable EP devices are to earlier versions what smart phones are to rotary phones. They are not only smaller and more comfortable; they offer complex programming options that allow clinicians to adapt a device to individual patient requirements. As they continue to become smaller, smarter, and more adaptable, these devices also become more challenging for clinicians to set up, manage and monitor. This unique, quick-reference guide dramatically reduces the learning curve for mastering this essential technology by giving doctors and technicians the how-to information they need. Focuses on tasks clinicians perform, including pre-implementation, planning, programming, management, troubleshooting, and more Shows how expert clinicians achieve optimal outcomes in their own labs with real-world examples Features more than 300 images, including ECGs, X-ray and fluoroscopy, images from device interrogation, intracardiac electrograms, and color electroanatomical maps Provides eight videos on an accompanying website demonstrating key tasks and techniques

Also available in an eBook version, enhanced with instructional videos, *How-to Manual for Pacemaker and ICD Devices* is an indispensable tool of the trade for electrophysiologists, fellows in electrophysiology, EP nurses, technical staff, and industry professionals.

Arius is widely considered to be Rowan Williams's magnum opus. Long out of print and never before available in paperback, it has been newly revised. This expanded and updated edition marks a major publishing event. Arianism has been called the "archetypal Christian heresy" because it denies the divinity of Christ. In his masterly examination of Arianism, Rowan Williams argues that Arius himself was actually a dedicated theological conservative whose concern was to defend the free and personal character of the Christian God. His "heresy" grew out of an attempt to unite traditional biblical language with radical philosophical ideas and techniques and was, from the start, involved with issues of authority in the church. Thus, the crisis of the early fourth century was not only about the doctrine of God but also about the relations between emperors, bishops, and "charismatic" teachers in the church's decision-making. In the course of his discussion, Williams raises the vital wider questions of how heresy is defined and how certain kinds of traditionalism transform themselves into heresy. Augmented with a new appendix in which Williams interacts with

significant scholarship since 1987, this book provides fascinating reading for anyone interested in church history and the development of Christian doctrine.

It's a work of genius."—Jamie Goode, author of *The Science of Wine* "If Donald Barthelme had studied philosophy and oenology he might have written like Randall Grahm. The Mackay cousins—Natches, Rowdy, and Dawg—would do anything for family, so when former DHS agent Timothy Cranston drops off four sisters that Dawg never knew he had, there is no question: The cousins will protect and care for the girls, and their mother, because they're family. Five years later, Eve Mackay, the eldest sister, has graduated from college and settled in to life as a Mackay in Pulaski County, Kentucky. She works hard as a cocktail waitress and helps out at the bed-and-breakfast that Dawg bought for her mother. If she keeps herself busy enough, maybe she'll be able to stay away from the man she promised Dawg she wouldn't date, the man who has awakened her most ravenous fantasies... He's Brogan Campbell, a biker rumored to be a traitor and a thief. But he's just playing a part; he came to Kentucky for a DHS mission that no one, except Cranston, is supposed to know about. Eve is the key to the whole operation, and his orders are to get her participation. But his need for Eve has nothing to do with stolen secrets and the safety of the country... When Dawg took in Eve and her sisters, he warned them that if they ever lied, cheated, or betrayed the family, they risked losing everything. But desire and danger are locked in an inescapable embrace, and Eve has to make her choice between family or Brogan, for better or worse...
