Business Operations Report

Designed for the second year elective opted by a third of the student body at the Harvard Business School, Hayes, Pisano and Upton break new ground in this text/casebook by emphasizing the manufacturing process itself as a competitive weapon. Today, companies typically adopt one or more of a growing number of improvement programs, such as TQM (Total Quality Management), JIT (Just-in-Time) production, and DFM (Design for Manufacturability). The majority of these improvement efforts, according to recent surveys, have not been successful. By pinning their hopes on a few best-practice approaches, managers implicitly abandon the central concept of a strategy in favor of a generic approach to competitive success. In clear, accessible prose, the authors propose a new explanation for the problems companies face by specifying the kind of competitive advantage each company is seeking in its marketplace and articulates how that advantage is to be achieved.

The Oxford Handbook of Organizational Climate and Culture presents the breadth of topics from Industrial and Organizational Psychology and Organizational Behavior through the lenses of organizational climate and culture. The Handbook reveals in great detail how in both research and practice climate and culture reciprocally influence each other. The details reveal the many practices that organizations use to acquire, develop, manage, motivate, lead, and treat employees both at home and in the multinational settings that characterize contemporary organizations. Chapter authors are both expert in their fields of research and also represent current climate and culture practice in five national and international companies (3M, McDonald's, the Mayo Clinic, PepsiCo and Tata). In addition, new approaches to the collection and analysis of climate and culture data are presented as well as new thinking about organizational change from an integrated climate and culture paradigm. No other compendium integrates climate

and culture thinking like this Handbook does and no other compendium presents both an up-to-date review of the theory and research on the many facets of climate and culture as well as contemporary practice. The Handbook takes a climate and culture vantage point on micro approaches to human issues at work (recruitment and hiring, training and performance management, motivation and fairness) as well as organizational processes (teams, leadership, careers, communication), and it also explicates the fact that these are lodged within firms that function in larger national and international contexts.

Through ten editions, Fox and McDonald's Introduction to Fluid Mechanics has helped students understand the physical concepts, basic principles, and analysis methods of fluid mechanics. This market-leading textbook provides a balanced, systematic approach to mastering critical concepts with the proven Fox-McDonald solution methodology. In-depth yet accessible chapters present governing equations, clearly state assumptions, and relate mathematical results to corresponding physical behavior. Emphasis is placed on the use of control volumes to support a practical, theoretically-inclusive problem-solving approach to the subject. Each comprehensive chapter includes numerous, easy-to-follow examples that illustrate good solution technique and explain challenging points. A broad range of carefully selected topics describe how to apply the governing equations to various problems, and explain physical concepts to enable students to model real-world fluid flow situations. Topics include flow measurement, dimensional analysis and similitude, flow in pipes, ducts, and open channels, fluid machinery, and more. To enhance student learning, the book incorporates numerous pedagogical features including chapter summaries and learning objectives, end-of-chapter problems, useful equations, and design and open-ended problems that encourage students to apply fluid mechanics principles to the design of devices and systems.

For more than thirty years and through eleven editions, James Henslin's *Down to Earth Sociology* has opened new windows onto the social realities that shape our world. Now in its twelfth edition, the most popular anthology in all of sociology includes new articles on our changing world while also retaining its classic, must-read essays. Focusing on social interaction in everyday life, the forty-five selections bring students face-to-face with the twin projects of contemporary sociology: understanding the individual's experience of society and analyzing social structure. The twelfth edition's exceptional new readings include selections on the unspoken rules of social interaction, the shocking disparities between upper- and lower-class life, America's changing attitudes toward work and family and the roles they fulfill, and the "McDonaldization" of American society. Together with these essential new articles, the selections by Peter Berger, Herbert Gans, Erving Goffman, Donna Eder, Zella Luria, C. Wright Mills, Deborah Tannen, Barrie Thorne, Sidney Katz, Philip Zimbardo, and many others provide firsthand reporting that gives students a sense of "being there." Henslin also explains basic methods of social research, providing insight into how sociologists explore the social world. The selections in *Down to Earth Sociology* highlight the most significant themes of contemporary sociology, ranging from the sociology of gender, power, politics, sports, and religion, to the contemporary crises of racial tension, crime, rape, poverty, and homelessness.

For thirty-five years and through thirteen editions, Jim Henslin's *Down to Earth Sociology* has opened new windows onto the social realities that shape our world. Now in its fourteenth edition, the most popular anthology in sociology includes new articles on our changing world while also retaining its classic must-read essays. Focusing on social interaction in everyday life, the forty-six selections bring students face-to-face with the twin projects of contemporary sociology: understanding the individual's experience of society and analyzing social structure. The fourteenth edition's exceptional new readings include selections on the role of sympathy in everyday life, mistaken perceptions of the American family, the effects of a criminal record on getting a job, and the major social trends affecting our future. Together with these essential new articles, the selections by Peter Berger, Herbert Gans, Erving Goffman, Donna Eder, Zella Luria, C. Wright Mills, Deborah Tannen, Barrie Thorne, Sidney Katz, Philip Zimbardo, and many others provide firsthand reporting that gives students a sense of "being there."
