Designing Interfaces

Geared to IT professionals eager to get into the all-important field of data warehousing, this book explores all topics needed by those who design and implement data warehouses. Readers will learn about planning requirements, architecture, infrastructure, data preparation, information delivery, implementation, and maintenance. They'll also find a wealth of industry examples garnered from the author's 25 years of experience in designing and implementing databases and data warehouse applications for major corporations. Market: IT Professionals, Consultants.

Data Warehousing Fundamentals

If you've ever wanted to reload ammunition but didn't know where to start this book is for you. You'll find detailed chapters about primers, cartridge cases, gun powder, and bullets, explaining in layman's terms what they are, variations you'll encounter and the characteristics of each. You'll also learn the different facets of case preparation: which are necessary and which are optional, and how to do them. You'll learn some characteristics of gunpowder and which types work best with bulk measurements. There'll be detailed photos and explanations teaching the process of reloading ammunition. From there you'll be shown how you can gear up to reload your own ammunition even if you don't have much money or space. Although most of the book is geared toward metallic cartridge reloading there's also a chapter on reloading shotgun ammunition. It too, will show you the

steps involved and how to become operational with very little money and minimal space requirements. After reading this book the novice reloader will: (a) be capable of making informed choices when purchasing their equipment and components; (b) be able to understand the reloading process and why certain steps are taken or omitted; (c) have a safe, profitable and enjoyable experience from the very beginning.

The 2010/11 season will go down as a memorable one for Goalkeeper Richard Lee. After more than ten years at Watford FC, Richard signed for League One outfit Brentford FC, but soon found himself cast aside. Dropped after one game and behind three other goalkeepers before he would get another opportunity - Richard would take on his toughest challenge to date! Cup wins, penalty saves, hypnotherapy and injury would follow, but these things only tell a small part of the tale. Suffering from acute mental anxiety throughout his career pushed Richard into making a choice between fight or flight. Could he overcome his fears or take the easy road out and quit? Fortunately for Brentford fans, he chose to fight. Throughout this book, Richard shares his understanding of the mind and how to apply it for high-level performance. Filled with anecdotes, insights, humour and honesty - Graduation uncovers Richard's campaign to take back the number one spot, save a lot of penalties, and overcome new challenges. What we see is a

transformation - beautifully encapsulated in this extraordinary season.

Learn what works, what doesn't work, and why! Following the numerous chapters on the science and safety of cartridge reloading, there are over 200 pages of rifle cartridge loads and another 20 pages of handgun cartridge loads to help handloaders get the most out of their cartridges. Handbook for Shooters & Reloaders has been the quintessential guide for cartridge reloaders since 1962. Widely renowned in reloading and wildcat circles, this book culminates decades of reloading experience and cartridge development by P. O. Ackley and a number of contributing writers. Backed by extensive research, the information contained in this first volume provides comprehensive information on wildcat cartridges and covers basic to advanced techniques that remain timeless. Parker O. Ackley (1903-1989), revered as one of the foremost authorities on wildcat cartridges, was an avid gunsmith, researcher, and writer. His Ackley Improved Cartridges brought an innovative twist to cartridge design, and he is credited with the development of high-velocity wildcat cartridges.

The Gun Digest Book of Sig-Sauer

Are you brave? When the mysterious Amelia Pigeon turns up at Kirby's bedroom window in the dead of night, this is the question she asks him – immediately before they tumble into a world of ancient malevolent spirits who have torn their way into Kirby's boring seaside village. Kirby isn't feeling brave at all. His mother is in a coma following a freak (or was it?) accident, and he's hardly talking to his dad. He's convinced a spider is watching him, and now a weird girl in a yellow raincoat – who

claims to be a powerful, evil-banishing Shadowsmith – is dragging him into unknown danger. How brave is he really? Ross MacKenzie, author of the Blue Peter award-winning *The Nowhere Emporium*, weaves a world of magic and adventure which twists and turns magnificently and will keep thrilled young readers guessing right to the end.

Medical edibles have come a long way since the infamous pot brownies that were consumed with crunchy, awful-tasting leaves and stems. Aunt Sandy's *Medical Marijuana Cookbook* is a collection of recipes by cooking instructor, Sandy Moriarty, who is a professor at Oaksterdam University in Oakland Ca. Oaksterdam University has pioneered training for jobs in the booming marijuana industry. The cookbook is retro in design and content, reminiscent of classic Betty Crocker-type

comfort foods. Some of Sandy's favorites include mac and cheese, spicy buffalo wings, and scalloped potatoes. The book visually demonstrates and reveals the process for creating Sandy's 10x Cannabutter. It includes 40 easy-to-prepare, delicious dishes from her signature dessert, Blue Sky Lemon Bars, to the Dizzy Bird Turkey with Stuffing for a festive holiday dinner. The book updates some of the classics with low-calorie, vegetarian, vegan, sugar-free and gluten-free options. Each individual's potency level is different. The author teaches how potency can be adjusted by the amount of plant material used in the butter, oil or tincture. The American Medical Association has now recognized the medical value of marijuana and the federal government has provided medical marijuana to selected medical patients for many years.

Creating robust artificial intelligence is one of the greatest challenges for game developers, yet the commercial success of a game is often dependent upon the quality of the AI. In this book, Ian Millington brings extensive professional experience to the problem of improving the quality of AI in games. He describes numerous examples from real games and explores the underlying ideas through detailed case studies. He goes further to introduce many techniques little used by developers today. The book's associated web site contains a library of C++ source code and demonstration programs, and a complete commercial source code library

of AI algorithms and techniques. "Artificial Intelligence for Games - 2nd edition" will be highly useful to academics teaching courses on game AI, in that it includes exercises with each chapter. It will also include new and expanded coverage of the following: AI-oriented gameplay; Behavior driven AI; Casual games (puzzle games). Key Features * The first comprehensive, professional tutorial and reference to implement true AI in games written by an engineer with extensive industry experience. * Walks through the entire development process from beginning to end. * Includes examples from over 100 real games, 10 in-depth case studies, and web site with sample code.

Success and promotion within Toronto's public transportation system come at a price. The shifts bring both physical and mental stress. The effects of these seep from work life into the social and personal lives of the operators. Parallel to this is the author's own personal story, a moving portrayal of a broken family home, abandoned teen dreams and a desperate need to be loved and appreciated. The author struggles with daily abuse from the public and his own demons, to the point of almost calling it quits. However his own personal quest to be the best at whatever he does leads him to experience a shift in life focus when he starts to do his job as if the CEO is standing at his side on every shift.

Ernest Hemingway is a mythic writer and alpha male. As a hunter and conservationist, he drew greatly from the strong example of Theodore Roosevelt, and he much enjoyed teaching newcomers to shoot and hunt. Including short excerpts from Hemingway's works, these stories of his guns and rifles tell us as much about him as a lifelong, expert hunter and shooter and as a man.

The manufacture and use of the powders of non-ferrous metals has been taking place for many years in what was previously Soviet Russia, and a huge amount of knowledge and experience has built up in that country over the last forty years or so. Although accounts of the topic have been published in the Russian language, no English language account has existed until now. Six prominent academics and industrialists from the Ukraine and Russia have produced this highly-detailed account which covers the classification, manufacturing methods, treatment and properties of the non-ferrous metals (aluminium, titanium, magnesium, copper, nickel, cobalt, zinc, cadmium, lead, tin, bismuth, noble metals and earth metals). The result is a formidable reference source for those in all aspects of the metal powder industry. * Covers the manufacturing methods, properties and importance of the following metals: aluminium, titanium, magnesium, copper, nickel, cobalt, zinc, cadmium, noble metals, rare earth metals, lead, tin and bismuth. * Expert Russian team of authors, all very experienced * English translation and update of book previously published in Russian.

Intelligent readers who want to build their own embedded computer systems-- installed in everything from cell phones to cars to handheld organizers to refrigerators-- will find this book to be the most in-depth, practical, and up-to-date guide on the market. Designing Embedded Hardware carefully steers between the practical and philosophical aspects, so developers can both create their own devices and gadgets and customize and extend off-the-shelf systems. There are hundreds of books to choose from if you need to learn programming, but only a few are available if you want to learn to create hardware. Designing Embedded Hardware provides software and hardware engineers with no prior experience in embedded systems with the necessary conceptual and design building blocks to understand the architectures of embedded systems. Written to provide the depth of coverage and real-world examples developers need, Designing Embedded

Hardware also provides a road-map to the pitfalls and traps to avoid in designing embedded systems. Designing Embedded Hardware covers such essential topics as: The principles of developing computer hardware Core hardware designs Assembly language concepts Parallel I/O Analog-digital conversion Timers (internal and external) UART Serial Peripheral Interface Inter-Integrated Circuit Bus Controller Area Network (CAN) Data Converter Interface (DCI) Low-power operation This invaluable and eminently useful book gives you the practical tools and skills to develop, build, and program your own application-specific computers.

Metallic Cartridge Handloading covers all aspects of the reloading process: cartridge case; maintaining, improving and loading the case; seating and reading of primers; loading of propellant; bullets and loading of bullets; accurate load development; internal & external ballistics; bullet making & casting; and handloading press. This is not a reloading manual containing specific recipes for various loads; it is a how-to book that covers the entire detailed process of cartridge reloading.

Nosler Reloading Guide 7

Learning how to reloading ammunition can be a daunting task. Technical manuals and books full of arcane data can make the subject mysterious and overwhelming. No more! The Practical Guide to Reloading Ammunition teaches the subject in a fun, easy-to-understand, and safe manner. Starting from the very beginning, The Practical Guide to Reloading Ammunition will help readers understand the gear they need - and what can wait. Chapter by chapter, the book explains the entire process from brass cleaning to final inspection. Loaded with pictures and illustrations, the process is made simple and clear. With this book, readers will be reloading their own cost-effective ammunition quickly and safely. The Practical Guide to Reloading ammunition focuses on the "how-to" aspects of reloading. Author Tom McHale explains. "Think of reloading manuals as sheet music. And this book as Mrs. Clutterbuck's piano lessons. If one develops a sudden urge to play

Carnegie Hall, or even Bodean's Wet Whistle Bar and Bait Shop, they could just order sheet music from the Internet. But it probably wouldn't be the most direct path to ivory key success. Take some lessons first, then order the sheet music." Although the author believes reading this book will be a far more pleasant experience than weekly lessons in Mrs. Clutterbuck's den, the idea is the same. The guide will teach aspiring reloaders how to get started. Topics Include: * Why take up reloading? * Is reloading right for you? * What equipment do you need? * Cleaning and processing brass. * The reloading process: step by step. * Pistol caliber reloading. * Rifle caliber reloading. * Buying reloading components. * Advanced equipment options - how gear can speed up the process. * Introduction to advanced topics.

There's a wealth of data online, but sorting and gathering it by hand can be tedious and time consuming. Rather than click through page after endless page, why not let bots do the work for you? Webbots, Spiders, and Screen Scrapers will show you how to create simple programs with PHP/CURL to mine, parse, and archive online data to help you make informed decisions. Michael Schrenk, a highly regarded webbot developer, teaches you how to develop fault-tolerant designs, how best to launch and schedule the work of your bots, and how to create Internet agents that:

- Send email or SMS notifications to alert you to new information quickly
- Search

different data sources and combine the results on one page, making the data easier to interpret and analyze –Automate purchases, auction bids, and other online activities to save time Sample projects for automating tasks like price monitoring and news aggregation will show you how to put the concepts you learn into practice. This second edition of Webbots, Spiders, and Screen Scrapers includes tricks for dealing with sites that are resistant to crawling and scraping, writing stealthy webbots that mimic human search behavior, and using regular expressions to harvest specific data. As you discover the possibilities of web scraping, you'll see how webbots can save you precious time and give you much greater control over the data available on the Web.

This publication is an informative guide book on reloading to include equipment and accessories used as tools of the trade. It also includes my extensive experiences as a reloader of approximately three hundred thousand rounds during the past thirty-five years. The book covers fourteen chapters with a major emphasis on Dillon reloading equipment and its many accessories. It does include discussions on other products from major manufacturers. Other chapters mention such subjects as reloading dies, primers, new pistol powders, reloading the 9mm, plated/coated/moly bullets, special topics, FAQs, and the Ruger American Pistol reviews with my experience loading for this firearm. This book is not an A to Z

manual on how to begin reloading. It is a highly referenced publication that is written for all working reloaders who want to learn more usable info and wish to develop a lifelong hobbypractical volume reloading.
