## **Public Health and Hospitals in the St. Louis Area**

Six dental schools have closed in the last decade and others are in jeopardy. Facing this uncertainty about the status of dental education and the continued tension between educators and practitioners, leaders in the profession have recognized the need for purpose and direction. This comprehensive volume--the first to cover the education, research, and patient care missions of dental schools--offers specific recommendations on oral health assessment, access to dental care, dental school curricula, financing for education, research priorities, examinations and licensing, workforce planning, and other key areas. Well organized and accessible, the book Recaps the evolution of dental practice and education. Reviews key indicators of oral health status, outlines oral health goals, and discusses implications for education. Addresses major curriculum concerns. Examines health services that dental schools provide to patients and communities. Looks at faculty and student involvement in research. Explores the relationship of dental education to the university, the dental profession, and society at large. Accreditation, the dental workforce, and other critical policy issues are highlighted as well. Of greatest interest to deans, faculty, administrators, and students at dental schools, as well as to academic health centers and universities, this book also will be informative for health policymakers, dental professionals, and dental researchers.

The aim of this collection of papers is to provide the reader with a cogent understanding of the role of evidence in the development of social or community-based interventions to promote inclusion oral-health and reduce oral health, health, and psychosocial inequities. In addition, this material will include various methods used for their implementation and evaluation. At the outset, the reader will be offered a working definition of inclusion oral-health, which will be modelled on the work of Luchenski et al. [1]. The interventions described are theoretically underpinned by a pluralistic definition of evidence-based practice [2] and the radical discourse of health promotion as postulated by Laverack and Labonte [3] and others [4,5]. This Special Issue will consist of eight papers, including an introduction. The first three papers will examine the various sources of evidence used to transform top-down into bottom-up community-based interventions for people experiencing homelessness; people in custody and for families residing in areas of high social deprivation. The final four papers will report on the implementation and evaluation of social or community-based interventions. This collection of research papers will highlight the importance of focusing on prevention and the adoption of a common risk factor agenda to tackle oral health, health and psychosocial inequities felt by those most excluded in our societies.

The foundations of health and wellbeing are laid down in pregnancy and the early years. Health for all Children takes a life course approach to child health, starting in pregnancy and extending to the age of seven to include transition into school, and to cover the foundation years in education. This new edition summarizes the evidence supporting preventive health care and health promotion; providing an effective, community-based response to the needs of families and children. Each chapter summarizes evidence of effectiveness in the topic area, in health promotion, and in universal and selective interventions. The fifth edition starts in pregnancy and runs until age seven taking into account Government policies and different models of delivery of the child health programme. Evidence from all over the world is critically appraised and referenced to UK policy and practice. Health for all Children summarizes the evidence about 'why' and 'what works' in health promotion and health surveillance with children and families, providing guidance on how to implement and quality assure a programme, and the competencies needed. Each chapter includes 'learning links' to online training materials and e-learning for health, or to resources freely available to practitioners. This established, evidence-based book continues to be essential reading for all health professionals who work with children. It will also provide vital background knowledge for those charged with the responsibility of planning, commissioning, and monitoring child health.
