Nurse Practitioner's Business Practice and Legal Guide

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the

percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Neonatal Advanced Practice Nursing

Functioning as both a graduate textbook and a professional resource, Role Development for Doctoral Advanced Nursing Practice explores the historical and evolving role of the doctorally-prepared Advanced Practice Registered Nurse (APRN). Because the role of the DNP graduate is evolving, the primary authors and contributing authors of this text present positions and reflective responses that represent a diverse range of current views on the DNP role and the diverse 'ideals' of what the role of the doctorally-prepared APRN should be. This is also the first text to market that exclusively examines the evolving and expanding role functions of the DNP graduate. Too often, nursing texts offer the sole view of the author. This

one uniquely does not. The highlight of this text is the two-part chapter organization that presents the chapter content followed by a Reflective Response, which is commentary that may counter or support the opinions of the chapter author. Each Reflective Response is written by well-known DNP leaders representing the diverse roles and experience of academics, administrators and practitioners. This innovative chapter presentation is bound to provide for more stimulating classroom discussion. This work is stimulating and possibly provocative, but in the end is a well-rounded, landmark presentation of a wide range of topics surrounding education of the DNP, the core competencies and the unfolding DNP role development. It is a 'must have' text for use in all DNP role development courses and courses covering contemporary DNP degree issues! Each of the textbook's sections thoroughly covers important aspects of role development: Section I: provides background information on the evolution of the DNP degree; essential content on role theory; what nursing "roles" are and how they evolved; and a discussion of how masters versus doctoral level advanced nursing practices differ Section II: focuses on the four basic roles of the DNP graduate which currently predominate: practitioner, clinical executive, educator, and clinical trials research scientist, as well as the role of the clinical scholar which each graduate is expected to be Section III: covers the diverse skills that comprise the doctoral APRN role; including leadership content, negotiation skills, and leveraging technology to support doctoral advanced level practice; debate over the DNP Exam; discussion of DNP grads using the title "Dr"; and how the doctoral APRN can use their new competencies to function at a higher level

Starting Your Practice

In *More Than Medicine*, LaTonya J. Trotter chronicles the everyday work of a group of nurse practitioners (NPs) working on the front lines of the American health care crisis as they cared for four hundred African American older adults living with poor health and limited means. Trotter describes how these NPs practiced an inclusive form of care work that addressed medical, social, and organizational problems that often accompany poverty. In solving this expanded terrain of problems from inside the clinic, these NPs were not only solving a broader set of concerns for their patients; they became a professional solution for managing "difficult people" for both their employer and the state. Through *More Than Medicine*, we discover that the problems found in the NP's exam room are as much a product of our nation's disinvestment in social problems as of physician scarcity or rising costs.
