chapter format presenting case examples, key surgical set-up and equipment needs and step-by-step clinical pearls for surgical excellence. Post-operative care and rehabilitation recommendations are also included for a well-rounded presentation of care from start to finish. Both common and complex pathologies and injuries are discussed, from bunion and hammertoe management to the Charcot foot and ankle, total ankle replacement, arthroscopy and arthroplasty techniques, amputations and biologics. Generous figures and intraoperative photos illustrate the procedures in vivid detail. The subspecialty of foot and ankle surgery is a highly specialized one, which is constantly evolving and improving. This speaks to the complexity of the foot and ankle complex, the multiple levels and articulations of the foot and the variety of pathologies encountered. This textbook leans on the unique experience and training of the OFAC attending surgeons and past fellows to reveal the pearls and keys to the efficient surgical treatment of the full gamut of foot and ankle pathologies. Ideally suited for residents and students whether MD, DO or DPM, Essential Foot and Ankle Surgical Techniques - EFAST for short - is a dynamic, multidisciplinary resource that covers the full range of pathologies and injuries an orthopedic surgeon or podiatrist would encounter in daily practice.
