International Conference on Reconstruction of War-Damaged Areas

This book shows clinicians how to use Interpersonal Reconstructive Therapy (IRT) to change maladaptive patterns regarding safety and threat in treatment-resistant patients. According to IRT theory, patients who suffer from maladaptive anger, anxiety, or depression are reenacting dysfunctional lessons in affect management modeled by parents and other early attachment figures. For example, a depressed woman who is afraid to assert herself can be described as reliving a childhood during which speaking up was dangerous, leading to rejection, even abandonment. IRT gives sufferers the tools to revise or replace internalized versions of attachment figures (the "family in the head") to create a more secure internal base. IRT is integrative, drawing on any intervention relevant to the case

In this warm and engaging book, author Lorna Smith Benjamin shows how patients can more effectively cope with threat and find safety in their everyday lives.

Understanding People provides an overview and critique of current psychological assumptions about people and what differentiates them, and replaces them with a set of ideas taken from social constructionism. It begins with an examination of contemporary theories, then explores the critique of the social constructionists, before laying out the basis of an understanding of human action and behaviour, drawing on phenomenology and personal construct theory. Using everyday experience to illustrate the issues in personality theory (Is behaviour situation-specific? Why do we have a sense of self? Is there an unconscious?), this book will breathe life into an area of psychology that is so often arid, and, in the eyes of students, divorced from their world.

Oncoplastic and Reconstructive Surgery for Breast Cancer

Reoperative Aesthetic and Reconstructive Plastic Surgery has long been regarded as the gold standard for secondary surgery, the best place to find full coverage of the entire spectrum of reoperative scenarios encountered by plastic surgeons. A valued resource for surgeons seeking solutions to common surgical problems, it is filled with clinical insights for both experienced practitioners and residents studying for the boards. Presented by the world's foremost plastic surgeons, the book covers the range of scenarios requiring reoperation: staged procedures, revision of unsatisfactory results, refinements and finesse procedures, recurrence of disease, changes associated with aging, and complications. Readers will appreciate its logical, thorough instructions for dozens of procedures addressing the head and neck, breast and chest wall, trunk, and extremities. The semi-atlas format features steps described and illustrated along with special tips, cautions, and clinical caveats needed for unusual situations or to manage possible complications. The book includes detailed discussions of the common reasons for reoperation, crucial anatomic considerations, patient evaluation, and timing of reoperation. One chapter delves into the special psychological challenges presented by the reoperative patient with strategies for management. Another on reoperative rhytidectomy covers new developments in face-lift surgery with attention given to facial shaping, scar concealment, hairline restoration, and midface rejuvenation. Two DVDs with operative videos supplement the text.

Positive Psychology And The Body: The Somatopsychic Side To Flourishing

This new text helps facial plastic surgery fellows and advanced residents in otolaryngology/head and neck surgery find the answers they're looking for when preparing to take the American Board of Facial Plastic and Reconstructive Surgery exam. Covering core content relevant to the ABFPRS board exam, this guide emphasizes key facts and clinical pearls essential to exam success and includes hypothetical exam questions and relevant surgical and clinical images. Written by leader in the field and the Director for the facial plastic surgery fellowship program at the University of California Irvine, this book discusses everything from basic techniques and evidence-based medicine, to fillers, injectables, implants and the psychological aspects of plastic surgery. Additionally, the chapter layout and organization of the Facial Plastic and Reconstructive Surgery Study Guide allows the reader to focus on just those topics relevant to the board exam, making it a must-have for anyone preparing to take the exam.

The Constructive Mind is an integrative study of the psychologist Frederic Bartlett's (1886–1969) life, work and legacy. Bartlett is most famous for the idea that remembering is constructive and for the concept of schema; for him, 'constructive' meant that human beings are future-oriented and flexibly adaptive to new circumstances. This book shows how his notion of construction is also central to understanding social psychology and cultural dynamics, as well as other psychological processes such as perceiving, imagining and thinking. Wagoner contextualises the development of Bartlett's key ideas in relation to his predecessors and contemporaries. Furthermore, he applies Bartlett's constructive analysis of cultural transmission in order to chart how his ideas were appropriated

Radiation Oncology provides residents, fellows, and clinicians with a practical, evidence-based guide to the current management of difficult cases in radiation oncology. Emphasis is on the management of those clinical challenges commonly seen in practice that the community practitioner would normally handle without outside referral. The book offers comparisons of treatment approaches to difficult situations, allowing the reader to compare their current treatment approach to that of experts and others in the community. Radiation Oncology is organized in seven sections corresponding to the major treatment areas of radiation oncology. Each section includes three cases to illustrate specific clinical challenges for which there is no clear treatment protocol. The case discussion includes an expert opinion on optimal management along with alternatives from a second academic expert's perspective and from a community practitioner's perspective. The two volumes of The Social Dimension present a comprehensive survey of the major developments in social psychology which took place in Europe during the very active 1970s and 1980s. They aim to capture the diversity and vitality of the discipline, stress the growing emphasis on fully social analyses of social psychological phenomena - hence 'the social dimension' - and to provide a valuable resource for researchers in the future. Although comprehensive in scope,

the volumes are not written in the formal style of a reference handbook. Instead, the authors of the thirty-three chapters, drawn from more than a dozen mainly European countries and all experts in their own fields, were invited to present their own personal overviews of the issues in social psychology on which they were actively working. Both volumes are organized into three main Parts. Volume 1 is concerned with the social development of the child, interpersonal communication and relationships, and the social reality, group processes, and intergroup relations. This ambitious enterprise has produced a distinctive yet authoritative summary and evaluation of the growth points of social psychology in Europe which will interest and influence not only social psychologists but many readers from related disciplines.

Post-Disaster Reconstruction and Change

This book provides a critical analysis of the changing discourse and practice of post-conflict security-promoting interventions since the Cold War, such as disarmament, demobilization and reintegration (DDR), and security-sector reform (SSR) Although the international aid and security sectors exhibit an expanding appetite for peace-support operations in the 21st Century, the effectiveness of such interventions are largely untested. This book aims to fill this evidentiary gap and issues a challenge to 'conventional' approaches to security promotion as currently conceived by military and peace-keeping forces, drawing on cutting-edge statistical and qualitative findings from war-torn areas including Afghanistan, Timor Leste, Sudan,

Uganda, Colombia and Haiti. By focusing on specific cases where the United Nations and others have sought to contain the (presumed) sources of post-conflict violence and insecurity, it lays out a new research agenda for measuring success or failure. This book will be of much interest to students of peacebuilding, peacekeeping, conflict resolution, conflict and development and security studies in general.

importance of community perspectives in the post-disaster reconstruction process. Effective results in community recovery mandate that we holistically examine the complex interrelationship between physical and social dimensions. Through a series of case studies, *Post-Disaster Reconstruction and Change: Communities' Perspectives* explores community viewpoints on post-disaster aid provided by external agencies and demonstrates how equity and effectiveness are affected by community social organization, power structures, and leadership capacities. The book further focuses on how external aid in turn affects community livelihoods, cultures, and social organizations. Each chapter serves as a real-world case study based on several months of ethnographic fieldwork conducted in India, Nicaragua, Indonesia, Sri Lanka, and Argentina. Post-disaster community recovery depends on informed decisions that build on lessons learned from past experiences. This book shows how different communities have coped with and responded to various external interventions. Focusing on housing reconstruction and the restoration of livelihood, the authors demonstrate that changes in settlement location, morphology, housing materials, and design produce multiple cascading consequences for the inhabitants of reconstructed settlements. Ultimately, the book establishes the importance of integrating community perspectives in policies and programs for sustainable post-disaster reconstruction—enabling greater resiliency as well as future disaster risk reduction.

Psychological Aspects of Cancer: A Guide to Emotional and Psychological Consequences of Cancer, Their Causes and Their Management opens with two essays on the biological basis of emotion/mental-driven body processes and disease. The consequence of such considerations is that since thoughts and emotions can be modulated and changed by health care professionals, psychological counseling should be seen not only as a way to help patients cope, but possibly to influence the disease itself. A unique overview of a key area of cancer care, this important title then proceeds to offer a section on genetic predispositions to cancer and the psychological considerations involved in screening and pre-emptive therapies and decision-making in cancer therapy. A third section deals with the philosophical and religious underpinnings of psychological factors involved in coping with disease state stressors and the roles of hope in coping. The fourth section is an acknowledgement that patients with

cancer live in a social context, which often includes a partner and/or caregiver. The fifth section includes several essays on aspects and modalities of care-giving that are designed to help patients coping with their cancer and its aftermath, which increasingly extends for years. An important title covering key aspects of one of the most troubling disorders of our time, *Psychological Aspects of Cancer: A Guide to Emotional and Psychological Consequences of Cancer, Their Causes and Their Management* will provide the busy practitioner with cutting edge knowledge as well as practical information that can translate into better care for patients with cancer.
