"This book is designed to help students organize their thinking about psychology at a conceptual level. The focus on behaviour and empiricism has produced a text that is better organized, has fewer chapters, and is somewhat shorter than many of the leading books. The beginning of each section includes learning objectives; throughout the body of each section are key terms in bold followed by their definitions in italics; key takeaways, and exercises and critical thinking activities end each section"--BCcampus website.

Psychology Around Us, 2nd Edition

In this fresh new offering to the Intro Psychology course, authors John Cacioppo and Laura Freberg portray psychology as being an integrative science in two ways. First, they have written a text that reflects psychology's rightful place as a hub science that draws from and is cited by research in many other fields. Second, this text presents psychology as a unified science that seeks a complete understanding of the human mind, rather than as a loosely organized set of autonomous subspecialties. As psychology moves rapidly toward maturity as an integrative, multidisciplinary field, the introductory course offers an opportunity to teach all of psychology in one place and at one time. This text reflects that evolution--and the authors' excitement about it. The Psychology of Risk

Since the first edition of The Psychology of Risk there have been enormous macro-economic and socio-political changes globally - the chaos in the world banking system and the financial crisis and recessions that it presaged; the Arab Spring and the revolutionary shifts in power in the Middle East with rippled consequences around the world; the development of ever-more sophisticated cyber-terrorism that can strike the private individual or the nation state with equal ease. Amidst these changes in the face of hazard, do the psychological models built to explain human reactions to risk still apply? Has the research over the last few years resulted in an improvement in our understanding of how people perceive and act in relation to risk? In this second edition Professor Dame Breakwell uses illustrations and current examples to address these questions and provide a totally up-to-the minute review of what is known about the psychology of risk.

This book paints a portrait of adolescent psychology in 4 major regions: Africa/the Middle East, Asia, the Americas, and Europe. Featuring 24 revised and updated chapters from the International Encyclopedia of Adolescence (2007), readers are introduced to the way the majority of the world's adolescents actually live. Most contributors are indigenous to the country they review. As a whole the book paints an engaging panorama of adolescent life around the world, broadening students' cultural perspective. All chapters follow the same template to make it easier to compare topics across countries: Background (including demographics, ethnic diversity, and political system), Period of Adolescence, Beliefs, Gender, the Self, Family Relationships, Friends and Peers/Youth Culture, Love and Sexuality, Health Risk Behavior, Education, Work, Media, Politics and Military, and Unique Issues. Each chapter contains a map and photos and a list of references and suggested readings. The introductory chapter explains why the countries were selected and introduces the book's common themes. The section on Africa and the Middle East introduces students to teen life in Cameroon, one of the few places left where adolescents go through formal puberty rituals. In addition, readers learn about adolescent life in Ethiopia, Israel, Morocco, Nigeria, and Sudan. Next we travel to Asia -- China, India, Indonesia, and the Philippines. Here readers see how economic growth in India and China is creating opportunities for young people. In The Americas, readers are introduced to life in Argentina, Canada, Chile, Mexico, Peru, and the United States. The book concludes with adolescent life in Europe including the Czech Republic, France, Germany, Italy, the Netherlands, Russia, Sweden, and

challenging times and nudging us toward self-fulfilment. Psychologist Chris Mackey writes from personal experience, not only as a practitioner but also as a patient who has suffered serious mental illness. Formerly a rationalist with little time for non-scientific approaches, his own experiences and those of his patients have convinced him that synchronicity has a key role to play in helping us to tap into our intuitive and spiritual selves and guiding us through life. He now passionately believes that we need to embrace transcendent experiences and explore the opportunities for personal development offered by depression and states of mind that are often dismissed as psychosis. This exciting new approach to synchronicity and the treatment of depression and other mental disorders will be of great interest to practitioners and patients alike, as well as to anyone interested in the opportunities offered by altered states of consciousness. The book includes: * Carl Jung's original description of synchronicity * Real-life case studies * Brain science * Practical ways to work with synchronicity including journalling, symbol analysis and dream interpretation.

Winner of the University of San Diego Outstanding Leadership Book Award 2012! Shortlisted for the British Psychological Society Book Award 2011! Shortlisted for the CMI (Chartered Management Institute) Management Book of the Year Award 2011-2012! According to John Adair, the most important word in the leader's vocabulary is "we" and the least important word is "I". But if this is true, it raises one important question: why do psychological analyses of leadership always focus on the leader as an individual - as the great "I"? One answer is that theorists and practitioners have never properly understood the psychology of "we-ness". This

book fills this gap by presenting a new psychology of leadership that is the result of two decades of research inspired by social identity and self-categorization theories. The book argues that to succeed, leaders need to create, champion, and embed a group identity in order to cultivate an understanding of 'us' of which they themselves are representative. It also shows how, by doing this, they can make a material difference to the groups, organizations, and societies that they lead. Written in an accessible and engaging style, the book examines a range of central theoretical and practical issues, including the nature of group identity, the basis of authority and legitimacy, the dynamics of justice and fairness, the determinants of followership and charisma, and the practice and politics of leadership. The book will appeal to academics, practitioners and students in social and organizational psychology, sociology, political science and anyone interested in leadership, influence and power.

With chapters written by leading researchers from around the world, this volume examines learning and instruction in a variety of learning environments including

in classrooms and out of classrooms, and with a variety of learners including K-16 students and adult learners. Contributors to this volume demonstrate how and why educational practice should be guided by research evidence concerning what works in instruction. The Handbook is written at a level that is appropriate for graduate students, researchers, and practitioners interested in an evidence-based approach to learning and instruction. The book is divided into two sections: learning and instruction. The learning section consists of chapters on how people learn in reading, writing, mathematics, science, history, second language, and physical education, as well as how people acquire the knowledge and processes required for critical thinking, studying, self-regulation, and motivation. The instruction section consists of chapters on effective instructional methods—feedback, examples, questioning, tutoring, visualizations, simulations, inquiry, discussion, collaboration, peer modeling, and adaptive instruction. Each chapter in this second edition of the Handbook has been thoroughly revised to integrate recent advances in the field of educational psychology. Two chapters have been added to reflect advances in both helping students develop learning strategies and using technology to individualize instruction. As with the first edition, this updated volume showcases the best research being done on learning and instruction by traversing a broad array of academic domains, learning constructs, and instructional methods.
