Assessing Fitness for Military Enlistment

Since the end of the Cold War, the monopoly of legitimate organized force of many African states has been eroded by a mix of rebel groups, violent extremist organizations, and self-defence militias created in response to the rise in organized violence on the continent. African Border Disorders explores the complex relationships that bind states, transnational rebels and extremist organizations, and borders on the African continent. Combining cutting edge network science with geographical analysis, the first part of the book highlights how the fluid alliances and conflicts between rebels, violent extremist organizations and states shape in large measure regional patterns of violence in Africa. The second part of the book examines the spread of Islamist violence around Lake Chad through the lens of the violent Nigerian Islamist group Boko Haram, which has evolved from a nationally-oriented militia group, to an internationally networked organization. The third part of the book explores how violent extremist organizations conceptualize state boundaries and territory and, reciprocally, how do the civil society and the state respond to the rise of transnational organizations. The book will be essential reading for all students and specialists of African politics and security studies, particularly those specializing on

fragile states, sovereignty, new wars, and borders as well as governments and international organizations involved in conflict prevention and early intervention in the region.

International Organizations and the Law of the Sea

The U.S. Department of Defense (DoD) faces short-term and long-term challenges in selecting and recruiting an enlisted force to meet personnel requirements associated with diverse and changing missions. The DoD has established standards for aptitudes/abilities, medical conditions, and physical fitness to be used in selecting recruits who are most likely to succeed in their jobs and complete the first term of service (generally 36 months). In 1999, the Committee on the Youth Population and Military Recruitment was established by the National Research Council (NRC) in response to a request from the DoD. One focus of the committee's work was to examine trends in the youth population relative to the needs of the military and the standards used to screen applicants to meet these needs. When the committee began its work in 1999, the Army, the Navy, and the Air Force had recently experienced recruiting shortfalls. By the early 2000s, all the Services were meeting their goals; however, in the first half of calendar year 2005, both the Army and the Marine Corps experienced recruiting difficulties and, in some months, shortfalls. When recruiting goals are not being met, scientific guidance is needed to inform policy decisions regarding the advisability of lowering standards and the impact of any change on training time and cost, job performance, attrition, and the health of the force. *Assessing Fitness for Military Enlistment* examines the current physical, medical, and mental health standards for military enlistment in light of (1) trends in the physical condition of the youth population; (2) medical advances for treating certain conditions, as well as knowledge of the typical course of chronic conditions as young people reach adulthood; (3) the role of basic training in physical conditioning; (4) the physical demands and working conditions of various jobs in today's military services; and (5) the measures that are used by the Services to characterize an individual's physical condition. The focus is on the enlistment of 18- to 24-year-olds and their first term of service.

Technology offsets, a nonconventional international trade-financing tool, is used by governments (buyers) to obtain industrial and technological benefits from companies (sellers) as part of international procurement. Offsets deals involve billions of dollars and this practice exists in around 80 countries around the world. Though offsets is a popular practice in defence, it is increasingly gaining popularity in civil sectors. Offsets is often tainted by controversy and receives bad press. What then makes offsets popular? Governments claim that offsets delivers technology and knowledge transfer, skills in high technology sectors and employment, and offsets expands export opportunities through participation in OEM supply chains. For companies, offsets is mainly employed as a tool to obtain a competitive edge and win sales in international business. In the past, there have been mixed results of case studies on the impact of offsets successes and failures. Considering the mismanagement of globalisation, unfair trade agreements and current political and economic discontent, there is a stronger need for governments and companies to use vehicles such as offsets to create a relationship of trust and commitment for sustainable development. This book fills the gap in offsets and focuses on how to manage offsets more effectively by addressing issues of strategy, policy and implementation, technology management, governance and risk. Technology Offsets in International Defence Procurement is designed for those studying international procurement, international trade, international business, technology management, defence policy and industrial policy. This book will also be of interest to practitioners and policy makers in both government and industry.

This handbook is a practical aid to legislative drafting that brings together, for the first time, model texts of provisions covering all aspects of nuclear law in a consolidated form. Organised along the same lines as the Handbook on Nuclear Law, published by the IAEA in 2003, and containing updated material on new legal developments, this publication represents an important companion resource for the development of new or revised nuclear legislation, as well as for instruction in the fundamentals of nuclear law. It will be particularly useful for those Member States embarking on new or expanding existing nuclear programmes.

Saudi Arabia Customs Rules, Tariffs and Regulations Handbook - Strategic and Practical

Information

Disarmament is integral to the safeguarding and promotion of security, development, and human rights. Hundreds of millions of dollars are spent each year on disarmament operations, yet no comprehensive guide exists to explain clearly the international rules governing disarmament. This book seeks to fill that gap. It describes the international legal rules that govern disarmament and the operational, political, and technical considerations that govern their implementation. This book aims to support compliance, implementation, and further development of international disarmament law.

Traditionally, disarmament focused on weapons of mass destruction. This remains a critically important area of work. In recent decades, the scope of disarmament has broadened to encompass also conventional weapons, including through the adoption of rules and regulations to govern arms transfers and measures to eliminate specific munitions from stockpiles and to destroy explosive remnants of war. There have also been four "generations" of programmes to address small arms and light weapons at national or sub-national level through disarmament, demobilisation, and reintegration (DDR) programmes during and following the end of armed conflict. While an internationally accepted definition of disarmament does not yet exist, it is widely agreed that disarmament encompasses or interrelates with prohibitions and restrictions on the development, production, stockpiling, testing, and transfer of weapons and on their destruction. In addition to clarifying these elements, chapters of this guide will also consider the relationship between disarmament and the law of armed conflict, and with the United Nations Security Council, human security, public health, and non-state actors.

Criminal Defence at Police Stations

Criminal defence at the investigative stage has attracted growing attention due to the shifting focus of the criminal process onto pre-trial stages, and the recent European regulations adopted in this area. Increasingly, justice practitioners and legislators across the EU have begun to realise that 'the trial takes place at the police station'. This book provides a comprehensive legal, empirical and contextual analysis of criminal defence at the investigative stage from a comparative perspective. It is a socio-legal study of criminal defence practice, which draws upon original empirical material from England and Wales and the Netherlands. Based on extensive interviews with lawyers, and extended periods of observation, the book contrasts the encountered reality of criminal defence with the model role of a lawyer at the investigative stage derived from European norms. It places the practice of criminal defence within the broader context of procedural traditions, contemporary criminal justice policies and lawyers' occupational cultures. Criminal Defence at Police Stations questions the determinative role of procedural traditions in shaping criminal defence practice at the investigative stage. The book will be of interest for criminal law and justice practitioners, as well as for academics focusing on criminal justice, criminology, socio-legal studies, legal psychology and human rights.
