The manual opens with RCA's summary of tube fundamentals, covering the first 29 pages, with clear illustrations of tube actions. A spread of photos of tube manufacture follows, with the next 100 pages given to individual tube performance data. The final 16 pages cover tube testing, suggested circuits including 9 receivers, four audio amps and a microphone preamp. Operating conditions for resistance coupled A-F amplifiers is summarized in a table and tube bulb profiles are supplied. A two-page index completes the book. This manual RC-12 is an early historical snapshot of the growing tube technology in the United States, and a useful guide to the very early tubes which it details. It is especially useful to those who are restorers of antique equipment and a useful look at one period of thermionic valve development for any tube enthusiast.

This book, which contains instructions on how to cope with survival problems written by people who have actually lived under survival conditions, tells the main things that a man should know about living in uncivilized regions of the Arctic. This book deals with what to do first when an emergency arises, how to make an

effective shelter, how to find food, how to keep warm and care for clothing, how to care for sick and injured, and how to signal the rescue party. All of this is taken from the experiences of those who have fought the Arctic and won. Originally prepared for workers at the Arctic radar stations of the Cold War missile warning system, this handbook has a great deal of valuable information for the tourist, camper, hunter, fisherman or other cold regions traveler.
