Lance Corporal Francis Ledwidge lost his life in Flanders Fields, 1917, while serving with the British army in WWI. One of Ireland's finest poets, Ledwidge left the familiarity of his Co. Meath home and loved ones and joined the British army to follow the fate of so many other young men of that doomed generation. Hovering in the hazy half-light of memories and regrets and marking the 90th anniversary of the 3rd Battle of Ypres in 1917, this beautiful new play by Dermot Bolger follows Francis Ledwidge's final journey as he finds himself 'walking the road' alongside all of those who had touched his life. But where is Francis walking to? And will any of them ever see home?

America is in the middle of an epidemic it has never seen before. The opioid crisis knows no bounds. It is affecting individuals and families in every congressional district. Its consequences, ranging from personal health to the economy, are devastating. The opioid epidemic represents the convergence of the abuses of opioids, heroin, and synthetic drugs like fentanyl. Chapter 1 is a hearing before the committee on the Judiciary of the House of Representatives on challenges and solutions in the opioid abuse crisis. Chapter 2 reports on the Subcommittee on Oversight and Investigations hearing on the DEAs role in

combating the opioid epidemic. Drug cartels operate out of countries in the western hemisphere, and they do so by using sophisticated distribution systems that move narcotics into and across the United States. Heroin supplied by these cartels has created a public health epidemic and fueled drug violence across the United States as reported in chapter 3. Chapter 4 provides an overview of heroin trafficking into and within the United States. It includes a discussion of links between the trafficking of heroin and the illicit movement of related substances such as controlled prescription opioids and synthetic substances like fentanyl. The chapter also outlines existing U.S. efforts to counter heroin trafficking and possible congressional considerations going forward. Chapter 5 evaluates the extent to which DOD has strategy and implementing guidance for the National Guard counterdrug program, and assesses DODs processes to approve states counterdrug plans and distribute funding to the program, among other things.

Living Standards Measurement Survey Working Paper No. 130. This document presents a set of Living Standards Measurement Study (LSMS) questionnaires that have been developed for use in the Russian-speaking countries of the former Soviet Union. The questionnaires are available in English and Russian, as well as in an electronic format. The document describes in detail how to modify the questionnaires for use in any specific country. The author guides the questionnaire writer through the modification process, illustrating the important aspects of LSMS surveys, the translation and field-testing procedures, and a section-by-section description of the types of modification that are likely to be required to suit particular goals and circumstances. ### **A Journey Into the Philosophy of Alain Locke**

### **Continuum Mechanics of Solids**

First published in 1983, François Perroux's *A New Concept of Development* analyses the major paradox of our era: the desire for progress and the mistrust of its consequences. The author argues that the approach to the question of development may be the key to understanding both the present and what the future brings, representing a pattern which will seek to shape man's potential to his designs.

## **Laparo-Endoscopic Surgery**

Floricultural crops all over the world are challenged by a number of insect and mite pests. The pest scenario is changing, and with climate change the instances of new pest incidences have become a more common problem. Like other crops, the intensive cultivation of commercial flowers has accentuated pest problems, as farmers tend to use more agricultural chemicals, which, in turn, increase the problems of pesticide resistance, pest resurgence, and residues leading to health hazards. This volume, *Advances in Pest Management in Commercial Flowers*, looks at the major challenges and improvements in this growing area today. It first provides an informative overview of worldwide pests of important commercial flowers. It explores a number of important issues in this area, such as the role of climate change on insect pests of commercial flowers and the synthetic chemicals and their possible harmful effects on the environment.

This textbook explores the theory of Cosserat continuum mechanics, and covers fundamental tools, general laws and major models, as well as applications to the mechanics of granular media. While classical continuum mechanics is based on the axiom that the stress tensor is symmetric, theories such as that expressed in the seminal work of the brothers Eugène and François Cosserat are characterized by a non-symmetric stress tensor. The use of von Mises motor mechanics is introduced, for

the compact mathematical description of the mechanics and statics of Cosserat continua, as the Cosserat continuum is a manifold of oriented “rigid particles” with 3 dofs of displacement and 3 dofs of rotation, rather than a manifold of points with 3 dofs of displacement. Here, the analysis is restricted to infinitesimal particle displacements and rotations. This book is intended as a valuable supplement to standard Continuum Mechanics courses, and graduate students as well as researchers in mechanics and applied mathematics will benefit from its self-contained text, which is enriched by numerous examples and exercises.

### **Common Object Services Specification**

A complete account of three fundamental services--naming, event notification, life cycle--that are critical for realizing and maintaining objects within a distributed computing environment. Describes the general design principles that apply to these services including service dependencies, their relationships to the common object request broker (CORBA), the OMG Object Model and standards conformance. Also discusses the unique design principles employed by

each service.

## **Advances in Pest Management in Commercial Flowers**

Studies in Applied Mechanics, Volume 6: Mechanics of Material Behavior provides information pertinent to the fundamental aspects of the mechanics of material behavior. This book discusses the theory of plasticity and its application to the design of engineering components and structures. Organized into 24 chapters, this volume begins with an overview of the concept of material stability, which provided a unified approach for the derivation of stress-strain relations for the plastic behavior of metals. This text then examines the general equation for the plane-stress condition of orthotropic sheet material that is isotropic in its plane. Other chapters consider the developments in plasticity as applied to soil mechanics, with emphasis on applications to earthquake-induced landslide problems. This book discusses as well the restrictions on a hypothesized quasi-statically propagating planar surface. The final chapter deals with the effects of fiber orientation, delamination length, and ply thickness on the interlaminar fracture. This book is a valuable resource for engineers.

which are specific for non-linear problems: These problems require the knowledge and the understanding of theoretical foundations and their finite-element discretization as well as algorithms for solving the non-linear equations. ### **Cosserat Continuum Mechanics**

Continuum Mechanics of Solids is an introductory text for graduate students in the many branches of engineering, covering the basics of kinematics, equilibrium, and material response. As an introductory book, most of the emphasis is upon the kinematically linear theories of elasticity, plasticity, and viscoelasticity, with two additional chapters devoted to topics in finite elasticity. Further chapters cover topics in fracture and fatigue and coupled field

problems, such as thermoelasticity, chemoelasticity, poroelasticity, and piezoelectricity. There is ample material for a two semester course, or by selecting only topics of interest for a one-semester offering. The text includes numerous examples to aid the student. A companion text with over 180 fully worked problems is also available.

A unique 360-degree view of an incomparable 20th-century American artist One of the most emulated and significant figures in modern art, Andy Warhol (1928-1987) rose to fame in the 1960s with his iconic Pop pieces. Warhol expanded the boundaries by which art is defined and created groundbreaking work in a diverse array of media that includes paintings, sculptures, prints, photographs, films, and installations. This ambitious book is the first to examine Warhol's work in its entirety. It builds on a wealth of new research and materials that have come to light in recent decades and offers a rare and much-needed comprehensive look at the full scope of Warhol's production--from his commercial illustrations of the 1950s through his monumental paintings of the 1980s. Donna De Salvo explores how Warhol's work engages with notions of public and private, the redefinition of media, and the role of abstraction, while a series of incisive and eye-opening essays by eminent scholars and contemporary artists touch on a broad range of topics, such as Warhol's response to the AIDS epidemic, his international influence, and how his work relates to constructs of self-image seen

in social media today.

## **A Country Such as this**

Giorgio Manganelli (1922-1990), one of Italy's most radical and original writers, went further than most in exploring the creative possibilities of hybrid genres and open forms. Ostentation, theatricality, and a love of drapery and verbal excess are defining features of his body of work, which ranges from prose fiction, literary criticism, and drama to travel writing, treatises, commentaries, and imaginary interviews. This study examines the wealth of Manganelli's imagination - his grotesque animals, speaking corpses, and melancholy spectres - and argues that his spectacular eloquence was shaped by an exceptional awareness of literary and philosophical models. Following Manganelli's lead, the author addresses issues such as the boundaries of meaningful language, the relationship between literary and visual texts, fantasy and realism, and the power of literature to express the apprehensions and intimations of human consciousness.

It is now clear that minimally-invasive procedures have become established in the surgical armamentarium and have made a major impact on the speed, cost and recovery time of many operations. Not surprisingly, those at the forefront of surgery are constantly trying to apply minimally-invasive methods to an increasing number of operations. Probably the most useful and versatile of these approaches is laparoscopy. This lavishly illustrated book presents an overview of all the surgical techniques currently possible using the laparoscopic route under endoscopic guidance. The chapters have been written primarily by those who have established themselves as the leading exponents of these techniques. Most of the top names in minimally-invasive surgery are represented in this text; they offer the benefit of their own experiences with each technique and explain their outcomes.

## **Morres**

Genesis: The Evolution of Biology presents a history of the past two centuries of biology, suitable for use in courses, but of interest more broadly to evolutionary biologists, geneticists, and biomedical scientists, as well as general readers interested in the history of science. The book covers the early evolutionary biologists-Lamarck, Cuvier, Darwin and Wallace through Mayr and the neodarwinian synthesis, in much the same way as other histories of evolution have done, bringing in also the social implications, the struggles with our religious understanding, and the interweaving of genetics into evolutionary theory. What is novel about Sapp's account is a real integration of the cytological tradition, from Schwann, Boveri, and the other early cell biologists and embryologists, and the coverage of symbiosis, microbial evolutionary phylogenies, and the new understanding of the diversification of life coming from comparative analyses of complete microbial genomes. The book is a history of theories about evolution, genes and organisms from Lamarck and Darwin to the present day. This is the first book on the general history of evolutionary biology to include the history of research and theories about symbiosis in evolution, and first to include research on microbial evolution which were excluded from the classical neo-Darwinian synthesis. Bacterial evolution, and symbiosis in evolution are also excluded from virtually every book on the history of biology.

Essays presented here were selected from papers given at a conference held in June 1990 at the University of London. The conference included coverage of feminist readings of male and female writers, both Spanish and Latin-American, from the Golden Age to the late-20th century. The essays represent the British contribution to the ongoing debate on the interaction between feminism and hispanism. Writers examined include Calderon, Galdos, Valle-Inclan, Unamuno, Pardo Bazan, Rosa Chacel, Alfonsina Storni, Bombal, Luisa Valenzuela, and others.

When John Maynard Keynes likened Jan Tinbergen's early work in econometrics to black magic and alchemy, he was expressing a widely held view of a new discipline. However, even after half a century of practical work and theorizing by some of the most accomplished social scientists, Keynes' comments are still repeated today. This book assesses the foundations and development of econometrics and sets out a basis for the reconstruction of the foundations of econometric inference by examining the various interpretations of probability theory which underlie econometrics. Keuzenkamp claims that the probabilistic foundations of econometrics are weak, and although econometric inferences may yield interesting knowledge, claims to be able to falsify or verify economic theories are unwarranted. Methodological falsificationism in econometrics is an illusion. Instead, it is argued, econometrics should

locate itself in the tradition of positivism.
