Men of Mark

'Thank you for your order, Mr Mainframe Customer. The cost is £5 million and the lead-time for manufacture will be two years. In the meantime you will have to build a special computer centre to our specification. For our part, our project team will help you recruit and train potential programmers and we shall advise on how you might use the system.' How different from today when the customer will want to see a specific application running before he puts a hand in his/her pocket. Chris Yardley lived the changes as a computer salesman and tells his story of a career living and working in five countries. Warts and all. The ecstasies, the heartbreaks and idiocies of major corporations. His career was not a planned one. In a growing industry, opportunities presented themselves and Chris believes he grasped every one presented. Having written his story, he has had every chapter verified by at least one person who features in that narrative. His respondents have universally endorsed the facts with comments such as 'Wow, I'd forgotten most of that'. 'You have a fantastic memory.' 'I never knew before the full facts of what happened.' 'How have you remembered all the circumstances?' 'It really is a people business.' This is the only book that has followed a computer sales career over almost 50 years.

The Palace Complex

Before the Computer

An anthology of 31 essays by the philosophically gifted selected by the editors as historically significant to the "post" in postmodernism, exhibiting the shift away from documentation and interpretation to an exploration of significance. The collection begins with Francis Bacon and Rene Descartes, traveling into 19th century social theory with Marx and Nietzsche, the challenges to those theories presented by Dewey and Kuhn, and the deconstruction of modernity with Foucault, Derrida, and Cornel West. In the final section, Habermas and Benhabib (among others) respond to postmodernism, taking us into the post postmodern contexts of the future. Lacks an index. Annotation copyright by Book News, Inc., Portland, OR

The Office

Hotel Front Office

The connoisseur's guide to the typewriter, entertaining and practical What do thousands of kids, makers, poets, artists, steampunks, hipsters, activists, and musicians have in common? They love typewriters—the magical, mechanical contraptions that are enjoying a surprising second life in the 21st century, striking a blow for self-reliance, privacy, and coherence against dependency, surveillance, and disintegration. The Typewriter Revolution documents the movement and provides practical advice on how to choose a typewriter, how to care for it, and what to do with it—from National Novel Writing Month to letter-writing socials, from type-ins to typewritten blogs, from custom-painted typewriters to typewriter tattoos. It celebrates the unique quality of everything typewriter, fully-illustrated with vintage photographs, postcards, manuals, and more.

Impro

The Palace of Culture and Science is a massive Stalinist skyscraper that was "gifted" to Warsaw by the Soviet Union in 1955. Framing the Palace's visual, symbolic, and functional prominence in the everyday life of the Polish capital as a sort of obsession, locals joke that their city suffers from a "Palace of Culture complex." Despite attempts to privatize it, the Palace remains municipally owned, and continues to play host to a variety of public institutions and services. The Parade Square, which surrounds the building, has resisted attempts to convert it into a money-making commercial center. Author Michał Murawski traces the skyscraper's powerful impact on 21st century Warsaw; on its architectural and urban landscape; on its political, ideological, and cultural lives; and on the bodies and minds of its inhabitants. The Palace Complex explores the many factors that allow Warsaw's Palace to endure as a still-socialist building in a post-socialist city.

A Guide to the Study and Use of Military History

The computer unlike other inventions is universal; you can use a computer for many tasks: writing, composing music, designing buildings, creating movies, inhabiting virtual worlds, communicating This popular science history isn't just about technology but introduces the pioneers: Babbage, Turing, Apple's Wozniak and Jobs, Bill Gates, Tim Berners-Lee, Mark Zuckerberg. This story is about people and the changes computers have caused. In the future ubiquitous computing, AI, quantum and molecular computing could even make us immortal. The computer has been a radical invention. In less than a single human life computers are transforming economies and societies like no human invention before.

Also Innovators

TO PRESUME to multiply books in this day of excellent writers and learned book-makers is a rash thing perhaps for a novice. It may even be a presumption that shall be met by the production itself being driven from the market by the keen, searching criticism of not only the reviewers, but less noted objectors. And yet there are books that meet a ready sale because they seem like "Ishmaelites"--against everybody and everybody against them. Whether this work shall ever accomplish the design of the author may not at all be determined by its sale. While I hope to secure some pecuniary gain that I may accompany it with a companion illustrating what our women have done, yet by no means do I send it forth with the sordid idea of gain. I would rather it would do some good than make a single dollar, and I echo the wish of "Abou Ben Adhem," in that sweet poem of that name, written by Leigh Hunt. The angel was writing at the table, in his vision. The names of those who love the Lord. Abou wanted to know if his was there--and the angel said "No." Said Abou, I pray thee, then, write me as one that loves his fellow-men. That is what I ask to be recorded of me. The angel wrote and vanished. The next night It came again, with a great awakening light. And showed the names whom love of God had blessed. And lo! Ben Adhem's name led all the rest. I desire that the book shall be a help to students, male and female, in the way of information concerning our great names. I have noticed in my long experience as a teacher, that many of my students were woefully ignorant of the work of our great colored men--even ignorant of their names. If they knew their names, it was some indefinable something they had done--just what, they could not tell. If in a slight degree I shall here furnish the data for that class of rising men and women, I shall feel much pleased. Herein will be found many who had severe trials in making their way through schools of different grades. It is a suitable book, it is hoped, to be put into the hands of intelligent, aspiring young people everywhere, that they might see the means and manners of men's elevation, and by this be led to undertake the task of going through high schools and colleges. If the persons herein mentioned could rise to the exalted stations which they have and do now hold, what is there to prevent any young man or woman from achieving greatness? Many, yea, nearly all these came from the loins of slave fathers, and were the babes of women in bondage, and themselves felt the leaden hand of slavery on their own bodies; but whether slaves or not, they suffered with their brethren because of color. That "sum of human villainies" did not crush out the life and manhood of the race. I wish the book to show to the world--to our oppressors and even our friends--that the Negro race is still alive, and must possess more intellectual vigor than any

other section of the human family, or else how could they be crushed as slaves in all these years since 1620, and yet to-day stand side by side with the best blood in America, in white institutions, grappling with abstruse problems in Euclid and difficult classics, and master them? Was ever such a thing seen in another people? Whence these lawyers, doctors, authors, editors, divines, lecturers, linguists, scientists, college presidents and such, in one quarter of a century?

Fundamentals of Nanotechnology

Since 1973 Michael Adler's first book, *The Writing Machine*, has been affectionately called "the bible of the typewriter enthusiast." The renowned typewriter expert's new book, is sure to stimulate the same enthusiasm all over again, bringing you new and as yet unpublished insights into the origins of the invention itself in a detailed history of the machine. Over 250 photographs illustrate this definitive text, which includes comprehensive directories of typewriter inventions, makes, and models, and a concise guide to their values with advice on buying and collecting. How much? When? Where? How good? How rare? Who? Why? If you are looking for answers to any or all of these questions, *Antique Typewriters* is the ultimate reference book for you - from the novice typewriter collector to "seasoned old hand" enthusiasts and historians.

The Auxiliary Language Ido

The piston engines that powered Second World War fighters, the men who designed them, and the secret intelligence work carried out by both Britain and Germany would determine the outcome of the first global air war. Advanced jet engines may have been in development but every militarily significant air battle was fought by piston-engined fighters. Whoever designed the most powerful piston engines would win air superiority and with it the ability to dictate the course of the war as a whole. This is the never-before-told story of a high-tech race, hidden behind the closed doors of design offices and intelligence agencies, to create the war's best fighter engine. Using the fruits of extensive research in archives around the world together with the previously unpublished memoirs of fighter engine designers, author Calum E. Douglas tells the story of a desperate contest between the world's best engineers - the Secret Horsepower Race.

Homage to Catalonia is George Orwell's account of the Spanish Civil War. It was the last and most mature of Orwell's documentary books.

Certain Personal Matters

The American

From Gutenberg to the Internet presents 63 original readings from the history of computing, networking, and telecommunications arranged thematically by chapters. Most of the readings record basic discoveries from the 1830s through the 1960s that laid the foundation of the world of digital information in which we live. These readings, some of which are illustrated, trace historic steps from the early nineteenth century development of telegraph systems---the first data networks---through the development of the earliest general-purpose programmable computers and the earliest software, to the foundation in 1969 of ARPANET, the first national computer network that eventually became the Internet. The readings will allow you to review early developments and ideas in the history of information technology that eventually led to the convergence of computing, data networking, and telecommunications in the Internet. The editor has written a lengthy illustrated historical introduction concerning the impact of the Internet on book culture. It compares and contrasts the transition from manuscript to print initiated by Gutenberg's invention of printing by moveable type in the 15th century with the transition that began in the mid-19th century from a print-centric world to the present world in which printing co-exists with various electronic media that converged to form the Internet. He also provided a comprehensive and wide-ranging annotated timeline covering selected developments in the history of information technology from the year 100 up to 2004, and supplied introductory notes to each reading. Some introductory notes contain supplementary illustrations.

Homage to Catalonia

This book constitutes the refereed post-proceedings of the Third IFIP WG 9.7 Conference on the History of Nordic Computing, HiNC3, held in Stockholm, Sweden, in October 2010. The 50 revised full papers presented together with a keynote address and a panel discussion were carefully reviewed and selected from numerous submissions. The papers focus on the application and use of ICT and ways in which technical progress affected the conditions of the development and use of ICT systems in the Nordic countries covering a period from around 1970 until the beginning of the 1990s. They are organized in the following topical sections: computerizing public sector industries; computerizing management and financial industries; computerizing art, media, and schools; users and systems development; the making of a Nordic computing industry; Nordic networking; Nordic software development; Nordic research in software and systems development; teaching at Nordic universities; and new historiographical approaches and methodological reflections.

The Four Profound Weaves

The Typewriter Revolution: A Typist's Companion for the 21st Century

The Universal Machine

"Superb. A perceptive, suspenseful account." --The New York Times Book Review "Dunn demythologizes Elizabeth and Mary. In humanizing their dynamic and shifting relationship, Dunn describes it as fueled by both rivalry and their natural solidarity as women in an overwhelmingly masculine world." --Boston Herald The political and religious conflicts between Queen Elizabeth I and the doomed Mary, Queen of Scots, have for centuries captured our imagination and inspired memorable dramas played out on stage, screen, and in opera. But few books have brought to life more vividly the exquisite texture of two women's rivalry, spurred on by the ambitions and machinations of the forceful men who surrounded them. The drama has terrific resonance even now as women continue to struggle in their bid for executive power. Against the backdrop of sixteenth-century England, Scotland, and France, Dunn paints portraits of a pair of protagonists whose formidable strengths were placed in relentless opposition. Protestant Elizabeth, the bastard daughter of Anne Boleyn, whose legitimacy had to be vouchsafed by legal means, glowed with executive ability and a visionary energy as bright as her red hair. Mary, the Catholic successor whom England's rivals wished to see on the throne, was charming, feminine, and deeply persuasive. That two such women, queens in their own right, should have been contemporaries and neighbours sets in motion a joint biography of rare spark and page-turning power.

WINNER 2009 CHOICE AWARD OUTSTANDING ACADEMIC TITLE! Nanotechnology is no longer a subdiscipline of chemistry, engineering, or any other field. It represents the convergence of many fields, and therefore demands a new paradigm for teaching. This textbook is for the next generation of nanotechnologists. It surveys the field's broad landscape, exploring the physical basics such as nanorheology, nanofluidics, and nanomechanics as well as industrial concerns such as

manufacturing, reliability, and safety. The authors then explore the vast range of nanomaterials and systematically outline devices and applications in various industrial sectors. This color text is an ideal companion to Introduction to Nanoscience by the same group of esteemed authors. Both titles are also available as the single volume Introduction to Nanoscience and Nanotechnology Qualifying instructors who purchase either of these volumes (or the combined set) are given online access to a wealth of instructional materials. These include detailed lecture notes, review summaries, slides, exercises, and more. The authors provide enough material for both one- and two-semester courses.

Mechanical Typewriters

When actor Christopher Reeve was asked in a BBC interview which book he would want if stranded on a desert island, he replied, ""The Inner Reality" by the philosopher Paul Brunton." A provocative and compelling work, "The Inner Reality "is an essential guide for spiritual seekers. First published in the 1930s, this remarkable book interweaves the teachings of two great religious figures: Jesus and Krishna. Identifying a common current running through both Christianity and Hinduism, Paul Brunton argues that an "inner reality" or "kingdom of heaven" can be found within each of us. Defining religion as simply the practice of binding oneself with divinity, he encourages readers to embark on the quest for self-knowledge and spiritual communion through a commitment to the contemplative path. With his profound interpretations of the world's sacred texts, from the Gospel of St. John to the "Bhagavad Gita," Brunton bridges East and West to guide the reader into the living heart of these ancient traditions. This new edition has been updated to incorporate the author's final revisions and includes a foreword by the Paul Brunton Philosophic Foundation.

Elizabeth and Mary

Before the Computer fully explores the data processing industry in the United States from its nineteenth-century inception down to the period when the computer became its primary tool. As James Cortada describes what was once called the "office appliance industry," he challenges our view of the digital computer as a revolutionary technology. Cortada interprets reliance on computers as a development within an important segment of the American economy that was earlier represented largely by such instruments as typewriters, tabulating machines, adding machines, and calculators. He also describes how many of the practices of the office appliance industry evolved into those of the computer world. Drawing on previously unavailable industry archives, the author adds to our understanding of IBM's early history and offers short corporate histories of firms that include NCR, Burroughs, and Remington Rand. Focusing on the United States but also including comparative material on Europe and Asia, Before the Computer will be a unique source of knowledge about the companies that built office equipment and their enormous impact on economic life. Originally published in 1993. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books

from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

The author recounts his experiences working in the computer industry, explains why projects fail or succeed, and discusses the future of the industry

A Few Good Men from Univac

Two transgender elders must learn to weave from Death in order to defeat an evil ruler--in the debut full-length work set in R. B. Lemberg's award-winning queer fantasy Birdverse universe "The Four Profound Weaves is the anti-authoritarian, queer-mystical fairy tale we need right now." --Annalee Newitz, author of *The Future of Another Timeline* "A beautiful, heartfelt story of change, family, identity, and courage." --Library Journal, starred review *The Surun'* nomads do not speak of the master weaver, Benesret, who creates the cloth of bone for assassins in the Great Burri Desert. But aged Uiziya must find her aunt in order to learn the final weave, although the price for knowledge may be far too dear to pay. Among the Khana in the springflower city of Iyar, women travel in caravans to trade, while men remain in the inner quarter, as scholars. A nameless man struggles to embody Khana masculinity, after many years of performing the life of a woman, trader, wife, and grandmother. As his past catches up, the nameless man must choose between the life he dreamed of and Uiziya--while Uiziya must discover how to challenge the evil Ruler of Iyar, and to weave from deaths that matter. In this breathtaking debut set in R. B. Lemberg's beloved Birdverse, *The Four Profound Weaves* offers a timeless chronicle of claiming one's identity in a hostile world. About the Birdverse: The Birdverse is the creation of fantasy author R. B. Lemberg. It is a complex, culturally diverse world, with a range of LGBTQIA characters and different family configurations. Named after its deity, Bird, Birdverse shorter works have been nominated the Nebula, Hugo, Tiptree award, and Rhysling awards. *The Four Profound Weaves* is the first full-length work set in the Birdverse.

Management Information Systems

The #1 New York Times–bestselling author of *Spartacus* reimagines the life of John Peter Altgeld, a courageous politician and forgotten national hero. Though Abraham Lincoln is often considered the United States' most legendary politician, he wasn't the only country lawyer out of Illinois to change the face of the nation. John Peter Altgeld fought for Lincoln as a foot soldier in the Union Army, then followed in his footsteps from law to politics, eventually becoming governor of Illinois in 1896. Howard Fast's dazzling fictional account of Altgeld's life offers an inspirational example of a man who made great sacrifices for quintessentially American ideals. Inspired by Altgeld's social reforms, such as his fight against the dehumanizing economic injustice of the Gilded Age and his trailblazing implementation of some of the nation's first child labor laws, Fast celebrates the compelling life of an unsung American luminary. This ebook features an illustrated biography of Howard Fast including rare photos from the author's estate.

History of Nordic Computing 3

NEW YORK TIMES BESTSELLER From one of the foremost historians of the period and the acclaimed author of *Inferno* and *Catastrophe: 1914*, *The Secret War* is a sweeping examination of one of the most important yet underexplored aspects of World War II—intelligence—showing how espionage successes and failures by the United States, Britain, Russia, Germany, and Japan influenced the course of the war and its final outcome. Spies, codes, and guerrillas played unprecedentedly critical roles in the Second World War, exploited by every nation in the struggle to gain secret knowledge of its foes, and to sow havoc behind the fronts. In *The Secret War*, Max Hastings presents a worldwide cast of characters and some extraordinary sagas of intelligence and resistance, to create a new perspective on the greatest conflict in history

Nation's Business

A new, thoroughly updated edition of a comprehensive overview of knowledge management (KM), covering theoretical foundations, the KM process, tools, and professions. The ability to manage knowledge has become increasingly important in today's knowledge economy. Knowledge is considered a valuable commodity, embedded in products and in the tacit knowledge of highly mobile individual employees. Knowledge management (KM) represents a deliberate and systematic approach to cultivating and sharing an organization's knowledge base. This textbook and professional reference offers a comprehensive overview of the field. Drawing on ideas, tools, and techniques from such disciplines as sociology, cognitive science, organizational behavior, and information science, it describes KM theory and practice at the individual, community, and organizational levels. Chapters cover such topics as tacit and explicit knowledge, theoretical modeling of KM, the KM cycle from knowledge capture to knowledge use, KM tools, KM assessment, and KM professionals. This third edition has been completely revised and updated to reflect advances in the dynamic and emerging field of KM. The specific changes include extended treatment of tacit knowledge; integration of such newer technologies as social media, visualization, mobile technologies, and crowdsourcing; a new chapter on knowledge continuity, with key criteria for identifying knowledge at risk; material on how to identify, document, validate, share, and implement lessons learned and best practices; the addition of new categories of KM jobs; and a new emphasis on the role of KM in innovation. Supplementary materials for instructors are available online.

Consumers Index to Product Evaluations and Information Sources

Information technology has been used in organisational settings and for organisational purposes such as accounting, for a half century, but IT is now increasingly being used for the purposes of mediating and regulating complex activities in which multiple professional users are involved, such as in factories, hospitals, architectural offices, and so on. The economic importance of such coordination systems is enormous but their design often inadequate. The problem is that our understanding of the coordinative practices for which these systems are developed is deficient, leaving systems developers and software engineers to base their designs on commonsensical requirements analyses. The research reflected in this book addresses these very problems. It is a collection of articles which establish a conceptual foundation for the research area of Computer-Supported Cooperative Work.

Remarks

The Age of Revolution

Cooperative Work and Coordinative Practices

A resource for industry professionals and consultants, this book on corporate strategy lays down the theories and models for revitalizing companies in the face of global recession. It discusses cutting-edge concepts, constructs, paradigms, theories, models, and cases of corporate strategic leadership for bringing about transformation and innovation in companies. It demonstrates that great companies are those that make the leap from 'good' results to 'great' results and sustain these for at least 15 years; it explores, reviews and analyzes great transformation strategies in this context. Each chapter in the book is appended with transformation exercises that further explicate the concepts.

Advanced Credit Risk Analysis and Management

Credit is essential in the modern world and creates wealth, provided it is used wisely. The Global Credit Crisis during 2008/2009 has shown that sound understanding of underlying credit risk is crucial. If credit freezes, almost every activity in the economy is affected. The best way to utilize credit and get results is to understand credit risk. Advanced Credit Risk Analysis and Management helps the reader to understand the various nuances of credit risk. It discusses various techniques to measure, analyze and manage credit risk for both lenders and borrowers. The book begins by defining what credit is and its advantages and disadvantages, the causes of credit risk, a brief historical overview of credit risk analysis and the strategic importance of credit risk in institutions that rely on claims or debtors. The book then details various techniques to study the entity level credit risks, including portfolio level credit risks. Authored by a credit expert with two decades of experience in corporate finance and corporate credit risk, the book discusses the macroeconomic, industry and financial analysis for the study of credit risk. It covers credit risk grading and explains concepts including PD, EAD and LGD. It also highlights the distinction with equity risks and touches on credit risk pricing and the importance of credit risk in Basel Accords I, II and III. The two most common credit risks, project finance credit risk and working capital credit risk, are covered in detail with illustrations. The role of diversification and credit derivatives in credit portfolio management is considered. It also reflects on how the credit crisis develops in an economy by referring to the bubble formation. The book links with the 2008/2009 credit crisis and carries out an interesting discussion on how the credit crisis may have been avoided by following the fundamentals or principles of credit risk analysis and management. The book is essential for both lenders and borrowers. Containing case studies adapted from real life examples and exercises, this important text is practical, topical and challenging. It is useful for a wide spectrum of academics and practitioners in credit risk and anyone interested in commercial and corporate credit and related products.

Knowledge Management in Theory and Practice

The Office Magazine of Management. Equipment. Automation.

Consumers Digest Guide to Discount Buying

Keith Johnstone's involvement with the theatre began when George Devine and Tony Richardson, artistic directors of the Royal Court Theatre, commissioned a play from him. This was in 1956. A few years later he was himself Associate Artistic Director, working as a play-reader and director, in particular helping to run the Writers' Group. The improvisatory techniques and exercises evolved there to foster spontaneity and narrative skills were developed further in the actors' studio then in demonstrations to schools and colleges and ultimately in the founding of a company of performers, called The Theatre Machine. Divided into four sections, 'Status', 'Spontaneity', 'Narrative Skills', and 'Masks and Trance', arranged more or less in the order a group might approach them, the book sets out the specific techniques and exercises which Johnstone has himself found most useful and most stimulating. The result is both an ideas book and a fascinating exploration of the nature of spontaneous creativity.
