This book is designed for the interior designer wanting to use hand sketching techniques, Google SketchUp, and Adobe Photoshop together to create beautiful designs and presentations. This book will teach you how to come up with fresh new design ideas and how to save time by using these powerful tools and techniques. This book presumes no previous experience with any of these tools and is divided into three sections. In the first section you will learn to use SketchUp and Photoshop starting with navigating the interface and then learning their features. In the next section you will learn hand sketching techniques and how to combine these with digital tools. In the last section of the book you will complete an interior design project leveraging the tools and techniques you learned in previous chapters while learning a few new techniques along the way. The first two chapters cover computer basics, including managing files and knowing your way around the operating system. The next three chapters introduce the reader to SketchUp, an easy to use 3D modeling program geared specifically towards architecture. Chapters six and seven present the basic tools found in Photoshop, which is the industry standard raster image editing software. Once you have worked through all the technology related introduction chapters, you will explore four chapters on various aspects of hand sketching. These chapters mainly focus on interior drawing concepts. The final four chapters work through the concept design process for an interior fit out project. The intent is that the reader would recreate these drawings as they appear in the book. The goal is to focus on understanding the process and developing the required techniques rather than getting bogged down in design right away.
