## **Singapore Business**

This book addresses the problems and issues surrounding teaching Chinese as a second language in the Singapore context. It identifies four main areas

of concern: (1) Neglect of culture in the teaching of Chinese; (2) Difficulty of learning Hanzi (Chinese characters); (3) Cognitive and affective aspects of Chinese language learning; and (4) Authenticity of the Chinese language in a global and Singapore context. The book includes lesson design and instructional practices for re-prioritizing Chinese as a set of trainable skills, as well as teaching culture in the context of teaching the language. It also introduces the Chinese as a Second Language Readability Formula to help learners overcome their difficulties with learning Hanzi (Chinese characters), and the Attitude Toward Chinese Language Scale to help understand the various factors that can influence Chinese language learning. It also proposes a student-oriented model for conducting problem-based research, tapping into the disciplines of psycholinguistics and sociolinguistics. Resolving or minimizing the issues identified here requires action at the macro level by Chinese language researchers on a national scale, and at the micro level by classroom teachers through action research.

Paper Based Sensors, Volume 89, the latest release in this comprehensive series that gathers the most important issues relating to the design and application of these cost-effective devices used in many industries, including health and environment diagnostics, safety and security, chemistry, optics, electrochemistry, nanoscience and nanotechnologies, presents the latest updates in the field. Chapters in this new release include Exploring paper as a substrate for electrochemical micro-devices, Paper-based sensors for application in biological compound detection, Printed paper-based (bio)sensors: design, fabrication and applications, Paper-based electrochemical sensing devices, Multifarious aspects of electrochemical paper-based (bio)sensors, Paper Based Biosensors for Clinical and Biomedical Applications, and more. Provides updates on the latest design in paper-based sensors using various nano and micromaterials Includes optical/electrical-based detection modes integrated within paper-based platforms Covers applications of paper-based platforms in diagnostics and other industries

### **Test Papers**

This book tells the story of a young man who failed

his PSLE examinations, but through sheer determination, perseverance and hard work is now a graduate teacher at a primary school in Singapore. Attending a full-time vocational course (Maintenance Fitting) in the day and part-time night classes, he scored his first success — a GCE N Level certificate in 1989. While in National Service, he studied and sat for the O Level exams, not once but twice so as to get better results to enter a polytechnic. While holding full-time day jobs, he attended night classes at Ngee Ann Polytechnic and in 1997 obtained a Diploma in Mechanical Engineering. In 2000, he joined the Ministry of Education and attended teacher training courses in the day while continuing at the polytechnic at night; by 2002, he had two more diplomas to his name — a Diploma in Education and an Advanced Diploma in Industrial Engineering and Management. Capping it all is a Bachelor of Arts in English with Psychology awarded by UniSIM in 2005. The author did not let failure set him back nor problems or challenges defeat him. He forged on with an iron will. He took a shot at every available educational opportunity Singapore offered to better himself – and he succeeded. A firm believer in lifelong learning, his 16-year journey of part-time studies covers true events of the many people who have helped him in one way or other.
