the ecclesiastical observer vol. xxxi

Describes Earth, discussing its position, composition, rotation, moon, and capacity to support life.

Hello, World! Solar System

Cookie's Victorian

Provides instructions for a variety of experiments and science fair projects exploring the solar system, including the sun, moon, planets, comets, and meteorites.

Earth and beyond

The Belief in a Personal God and a Future Life

NEW YORK TIMES BESTSELLER • The instant classic about why some ideas thrive, why others die, and how to improve your idea's chances—essential reading in the “fake news” era. Mark Twain once observed, “A lie can get halfway around the world before the truth can even get its boots on.” His observation rings true: Urban legends, conspiracy theories, and bogus news stories circulate effortlessly. Meanwhile, people with important ideas—entrepreneurs, teachers, politicians, and journalists—struggle to make them “stick.” In *Made to Stick*, Chip and Dan Heath

reveal the anatomy of ideas that stick and explain ways to make ideas stickier, such as applying the human scale principle, using the Velcro Theory of Memory, and creating curiosity gaps. Along the way, we discover that sticky messages of all kinds—from the infamous “kidney theft ring” hoax to a coach’s lessons on sportsmanship to a vision for a new product at Sony—draw their power from the same six traits. *Made to Stick* will transform the way you communicate. It’s a fast-paced tour of success stories (and failures): the Nobel Prize-winning scientist who drank a glass of bacteria to prove a point about stomach ulcers; the charities who make use of the Mother Teresa Effect; the elementary-school teacher whose simulation actually prevented racial prejudice. Provocative, eye-opening, and often surprisingly funny, *Made to Stick* shows us the vital principles of winning ideas—and tells us how we can apply these rules to making our own messages stick. **BONUS:** This edition contains an excerpt from Chip Heath and Dan Heath's *Switch*.

Mouse Paint

Learn about outer space with the help of everyone's favorite Cat in the Hat! The Cat in the Hat takes readers on an out of this world reading adventure in this nonfiction book all about our solar system. Learn about the planets, the constellations, and astronauts, and explore the wonders of space. Perfect for aspiring astronauts, or any kid who loves learning and science. The universe is a mysterious place. We are only just learning what happens in space. The Cat in the Hat's Learning Library is a nonfiction, unjacketed hardcover series that introduces beginning readers ages 5-8 to important basic concepts. Featuring beloved characters from Dr. Seuss's *The Cat in the Hat*, the Learning Library titles explore a range of topics about the world we live in and include an index, glossary, and suggestions for further reading. “Pretty much all the stuff you need to know is in Dr. Seuss.” –President Barack Obama

Discover The Wonder

Principles of Science I

Principles of Science I is a beginner level textbook written for home school and private schools for the Third Grade Level. This textbook introduces the student to the principal sciences by covering what is science, earth sciences, life sciences,

and astronomy. Each chapter of Principles of Science I engages the student through text, questions, research, and activities. Completion of this textbook prepares the student for higher levels of scientific study including this textbook's intermediate level companion Principles of Science II for the Fifth and Sixth Grade Levels.

Christain Conflict Resolution

Tracing the evolution of humankind's pursuit of astronomical knowledge, this resource looks deep into the furthest reaches of space. Children will follow along as the realization that the Earth is not at the center of the universe leads all the way up to recent telescopic proof of planets orbiting stars outside the solar system. In addition to its engaging history, this book contains 21 hands-on projects to further explore the subjects discussed. Readers will build a three-dimensional representation of the constellation Orion, see how the universe expands using an inflating balloon, and construct a reflecting telescope out of a makeup mirror and a magnifying glass. It also includes small biographies of famous astronomers, a time line of major scientific discoveries, a glossary of technical terms, and dozens of full-color images taken by the Hubble Space Telescope and the Chandra X-Ray Observatory.

Investigating Science - Solar System

Where am I in the solar system? A beloved bestseller, now refreshed with new art from Christine Gore, that will help children discover their place in the Milky Way. Where is the earth? Where is the sun? Where are the stars? Now with new art by Christine Gore, here is an out-of-this world introduction to the universe for children. With Earth as a starting point, a young astronaut leads readers on a tour past each planet and on to the stars, answering simple questions about our solar system. In clear language, drawings, and diagrams, space unfolds before a child's eyes. Colorful illustrations, filled with fun detail, give children a lot to look for on every page, and a glossary helps reinforce new words and concepts. A terrific teaching tool, Me and My Place in Space is an easy and enjoyable way to introduce the

concept of space to budding astronomers.

The Young Folks Cyclopedia of Common Things

Space

The award-winning climate scientist Michael E. Mann and the Pulitzer Prize-winning political cartoonist Tom Toles have been on the front lines of the fight against climate denialism for most of their careers. They have witnessed the manipulation of the media by business and political interests and the unconscionable play to partisanship on issues that affect the well-being of billions. The lessons they have learned have been invaluable, inspiring this brilliant, colorful escape hatch from the madhouse of the climate wars. *The Madhouse Effect* portrays the intellectual pretzels into which denialists must twist logic to explain away the clear evidence that human activity has changed Earth's climate. Toles's cartoons collapse counter-scientific strategies into their biased components, helping readers see how to best strike at these fallacies. Mann's expert skills at science communication aim to restore sanity to a debate that continues to rage against widely acknowledged scientific consensus. The synergy of these two climate science crusaders enlivens the gloom and doom of so many climate-themed books—and may even convert die-hard doubters to the side of sound science.

Christian Conflict Resolution presents stories based on conflicts relevant to today's children, along with fun and pertinent applications that challenge children to think about their words and actions from a biblical, Christ-centered perspective. Included with each story is an activity that applies the lesson or value covered in the story, an applicable Scripture reference, and discussion questions. Activities reinforce the lesson and include role-playing, writing, and drawing activities (such as write your own resolution), service projects, and more. The conflicts presented involve family, friends, and peers in a variety of situations and include such topics as honoring parents/teachers, dealing with anger, dealing with bullies, gossip, and cheating. With this book, children will be motivated to put their faith in action.

Me and My Place in Space

Veteran children's entertainer Tommy Donbavand gives tips on keeping children

entertained, whether it's a single child or an entire playscheme. The book is full of activities that will keep parents from tearing their hair out. CONTENTS: All the fun at the fair - around the world - arty party - body shots - comic strip - crazy golf - dinosaurs! - funny Formula One - get up, stand up - the great indoors - Hallowe'en horrors - hold the front page - hot on the tail - how to train your teacher - knights of the Round Table - let's do the show right here - lost in space - make a volcano - the monster olympics - now you're cookin' - oh, what a circus - on safari - on the catwalk - personalize your computer - pirates - pop stars - potty picture holder - quiz kids - really robotic - redesign your room - science lab - secret agents - under the sea - what a novel idea - wild on the web - write a song About the author Tommy Donbavand is also the author of Quick Fixes for Bored Kids and More Quick Fixes for Bored Kids.

Janice VanCleave's Solar System

"Now even the youngest children can enjoy learning about the world around them. Hello, World! is a new series designed to help parents introduce simple nonfiction concepts to their babies and toddlers. a Narrated in simple terms and featuring bright, simple, cheerful illustrations, Hello, World! makes learning easy for young children. Each page offers helpful prompts for engaging with your child. a Every young child loves to look up at the moon in the night sky. Now here's a book that can teach toddlers about the sun, moon, stars, and planets-with colors, shapes, sizes, and super-simple facts (oCan you point to the red planet? That's Mars!o). It's a perfect way to bring natural science into the busy world of a toddler, where learning never stops."

Boredom Busters

Explore the Solar System! 25 Great Projects, Activities, Experiments introduces kids ages 6-9 to the planets, moons, and other celestial bodies that surround our star, the sun, as well as the universe beyond. Combining a hands-on element with history and science, kids investigate solar eclipses, phases of the moon, Jupiter's rings, and what astronauts wear. Who named the stars? What is the Milky Way? Why is there night? By combining a hands-on element with riddles, jokes, fun facts, and comic cartoons, kids Explore the Solar System!, and have a blast along the way.

Supplementary Activities for Enriching the Teaching of Earth Science

Young children can create a busy airport scene with the images in this entertaining activity book. Features 30 full-color peel-and-apply stickers depicting passengers, flight crew, luggage handlers, a fuel truck, supersonic and conventional aircraft, and more that can be applied to a background scene of a runway, hangars, and a control tower. Full-color. 4 plates.

EXPLORE THE SOLAR SYSTEM!

Things at Home

Investigate essential science concepts with fun, easy-to-implement, hands-on activities designed to support the National Science Education Standards. You'll find plenty of creative ideas and reproducibles to enhance your curriculum, grab your students' attention, and make science connections to everyday life. A wide range of activities promote scientific inquiry and connect science with other areas of the curriculum, such as math, writing, and art. Investigating science has never been more fun! Each unit contains Step-by-step instructions Clearly defined objectives and skills Background information for the teacher Engaging reproducibles Valuable resource booklist

Social Science in the Light of the Solar System

The School Science Review

Drift back in time and share childhood memories and the ambiance of living in a Victorian dollhouse with an endearing family of animals. Meet Fuzzy the father bear, who constantly has hysterical encounters with inanimate objects, and Cookie the mother duck who loves to find out what's new and exciting. Button is their son, an inquisitive dog. With him you'll discover the biggest cave crystals, learn about dinosaurs, what the brightest object in space is, and how to bend water with static electricity. Gumdrop and Kitten are the daughters, a tiger and a kitten, full of creative ideas. With them you'll make a miniature fairy, cinnamon Christmas ornaments, and a recipe for bubbles. Fun facts about nature, books, and crafts are interwoven with many pleasant family memories. As Cookie's family travels, you'll learn about the ocean, discover the highest waterfall, witness unusual trees, be amazed by the world's largest geyser, and more. And miniaturists will love the wealth of ideas, projects, and sources. Cookie's Victorian is a book with a little something for everyone who loves the beauty of God's world, the beauty of Victorian homes, and the beauty of loving families.

The Madhouse Effect

Amazing Solar System Projects You Can Build Yourself introduces readers ages 9 and up to the basic elements of the solar system with over 25 hands-on building projects and activities. Readers learn about the sun, the planets and their moons, meteors and comets, and the amazing tools that astronomers and astronauts have used to study the solar system over the years. Amazing Solar System Projects You Can Build Yourself provides detailed step-by-step instructions and diagrams for

creating the projects, which include making a greenhouse to see what happens on Venus and constructing a model of the phases of the moon to demonstrate why the moon has phases. Fascinating facts, anecdotes, biographies, and trivia are interspersed with the fun projects to teach readers all about the solar system.
