Special education and gifted and talented programs were designed for children whose educational needs are not well met in regular classrooms. From their inceptions, these programs have had disproportionate representation of racial and ethnic minority students. What causes this disproportion? Is it a problem? *Minority Students in Special and Gifted Education* considers possible contributors to that disparity, including early biological and environmental influences and inequities in opportunities for preschool and K-12 education, as well as the possibilities of bias in the referral and assessment system that leads to placement in special programs. It examines the data on early childhood experience, on differences in educational opportunity, and on referral and placement. The book also considers whether disproportionate representation should be considered a problem. Do special education programs provide valuable educational services, or do they set students off on a path of lower educational expectations? Would students not now placed in gifted and talented programs benefit from raised expectations, more rigorous classes, and the gifted label, or would they suffer failure in classes for which they are unprepared? By examining this important problem in U.S. education and making recommendations for early intervention and general education, as well as for changes in referral and assessment processes, *Minority Students in Special and Gifted Education* will be an indispensable resource to educators throughout the nation, as well as to policy makers at all levels, from schools and school districts to the state and federal governments.

Known for its practical, applied approach, the fourth edition of John Venn's "Assessing Student's with Special Needs "continues to focus on how teachers can use assessment as a guide to instruction. This noteworthy revision focuses on what teachers really need to know to include assessment in the curriculum. Coverage includes all of the core information expected of an assessment text, but the book goes far beyond the basics by addressing multicultural considerations, technology and assessment, high-stakes testing, and the reauthorization of IDEA. The book clearly shows how assessment is more than giving a test to a child, but is an essential tool for teachers as they help students achieve, learn, develop, and grow.

Language in Social Life is a major series which highlights the importance of language to an understanding of issues of social and professional concern. It will be of practical relevance to all those wanting to understand how the ways we communicate both influence and are influenced by the structures and forces of contemporary social institutions. In all modern societies individuals are subject to tests, whether to enter educational programs, to pass from one level to the next or to grant certificates to practice. Yet, tests are powerful tools which are often introduced in undemocratic and unethical ways as disciplinary tools for carrying

out various policy agendas. Tests can be detrimental to people's lives as they are capable of affecting and defining the knowledge and behaviour of those who are being tested. The Power of Tests applies a critical perspective of language tests by examining their uses and consequences in education and society and by viewing tests not as isolated events but rather as embedded in social, educational and political contexts. The book is divided into four parts: the first part establishes the power of tests through echoing the voices of test takers, describing the features of the power of tests, and the temptations that tests offer to bureaucrats who use them for power and control. The second part reports on studies that provide empirical evidence about intentions and effects of a number of large scale language tests. The third part interprets the results by examining their consequences on education and society, arriving at a model of tests' use. The final section of the book offers strategies for controlling and minimising the misuses of tests by introducing the notion of Critical Language Testing which calls for the examination of the consequences and misuses of tests, monitoring of power and pointing to their unethical uses. It also provides a comprehensive discussion of the responsibilities of language testers, including a new Code of Ethics, as well as strategies for guarding and protecting the rights of test takers.

concerned with the mathematical and experimental studies of coupled thermo(T) -hydro(H) -mechanical(M) processes in fractured media related to radioactive waste disposal. The book presents, for the first time, the systematic formulation of mathematical models of the coupled T-H-M processes of fractured media, their validation against theoretical bench-mark tests, and experimental studies at both laboratory and field scales. It also presents, for the first time, a comprehensive analysis of continuum, and discrete approaches to the study of the problems of (as well as a complete description of), the computer codes applied to the studies. The first two chapters provide a conceptual introduction to the coupled T-H-M processes in fractured media and the DECOVALEX project. The next seven chapters give a state-of-the-art survey of the constitutive models of rock fractures and formulation of coupled T-H-M phenomena with continuum and discontinuum approaches, and associated numerical methods. A study on the three generic Bench-Mark Test problems and six Test Case problems of laboratory and field experiments are reported in chapters 10 to 18. Chapter 19 contains lessons learned during the project. The research contained in this book will be valuable for designers, practising engineers and national waste management officials who are concerned with planning, design and performance, and safety assessments of radioactive waste repositories. Researchers and postgraduate students working in this field will also find the book of particular relevance.

Assessing Students with Special Needs

Are IQ tests racially and culturally biased? That was the controversial question in two landmark lawsuits: the California case of Larry P. v. Riles (1979) and the Chicago case of PASE v. Hannon (1980). *Litigating Intelligence* is a detailed analysis and comparison of these complex cases--the background, evidence, testimony, arguments, and surprising outcomes. It is also an important case study of the role of social science testimony in the courtroom and the role of the courts in setting social policy.

reviews of the tests most administered in K-12 schools. Updated to reflect changes in the field, this edition brings to the forefront the important topics of MTSS/RTI and ELL -- while retaining key features that have made the text a classic. The authors focus on both classroom-based tests designed to inform instruction and intervention, as well as more formal standardized tests that are commonly used to determine eligibility for special education. Appropriate for novices and experts, this standard-setting text equips readers with the knowledge and tools to effectively and efficiently assess their students' skills and abilities. Featuring an emphasis on improved outcomes, it shows readers how to go beyond efforts designed to make predictions about students' lives to efforts that can make a difference in the lives of the students they serve.
