Manual of Engineering Drawing

CD-ROM offers rapid access to all of the most relevant federal guidelines and regulations. Presents treatment options for non-hazardous, non-radioactive wastes. Provides guidelines for the management of hazardous materials, antineoplastic and other hazardous drug waste, and low-level radioactive and laboratory waste. Explores the concerns of small facilities such as doctor or dentist offices. Discusses special issues such as water supply and wastewater discharge, indoor air quality, management of asbestos-containing materials, sharps management, and more. Addresses the management of chemical hazards, minimization of the human risk of infection, and improvement of safety. Reviews the regulations and regulatory framework that are most relevant for healthcare environmental managers.

Building Control Systems

ASHRAE Journal

This basic source for identification of U.S. manufacturers is arranged by product in a large multi-volume set. Includes: Products & services, Company profiles and Catalog file.

Manual of Engineering Drawing: British and International Standards, Fifth Edition, chronicles ISO and British Standards in engineering drawings, providing many examples that will help readers understand how to translate engineering specifications into a visual medium. The book includes 6 introductory chapters which provide foundational theory and contextual information regarding the broader context of engineering drawing and design. The concepts enclosed will help readers gain the most out of their drawing skills. As the standards referred to in this book change every few years, this new edition presents an important update. Covers all of the BSI and ISO standards that govern the drafting of technical product specification and standards Includes new chapters on design for additive manufacturing and computer-aided design Provides worked examples that will help readers understand how the concepts in the book are applied in practice

Environmental Management in Healthcare Facilities

The Journal of the Chartered Institution of Building Services

"With a focus on market needs and customer goals, this practical guide explains how to realize the full potential of geothermal HVAC by integrating hydronic systems and controls at maximum capacity. This book explains how to engineer and specify geothermal HVAC for building projects in varying geographic regions. Typical details on control parameters are provided. By using the proven methods in this innovative resource, you will be able to develop highly efficient, long-lasting, and aesthetically pleasing geothermal HVAC systems."--Back cover.

Modern Geothermal HVAC Engineering and Control Applications

Thomas Register

Workplace

Southeast Asia Building

The complete spectrum of lighting management strategies for efficiency improvement is fully detailed in this straightforward, non-technical reference. Ideal for building owners and managers, facility managers, or anyone concerned with reducing lighting costs, this book cuts through the maze of technical details to provide clear, readily applicable lighting answers. The author has placed special emphasis on the importance of effective maintenance, and the benefits of a well planned and executed lighting management program. In addition, the environmental aspects of lighting management are thoroughly addressed.

The Energy Products Directory

'Building Control Systems' provides the building services engineer with a comprehensive understanding of modern control systems and relevant information technology. This will ensure that the best form of control systems for the building is specified and that proper provision is made for its installation, commissioning, operation and maintenance. Beginning with an overview of the benefits of the modern building control system, the authors describe the different controls and their applications, and include advice on their set-up and tuning for stable operation. There are chapters on the practical design of control systems, how to work from the hardware components and their inclusion in networks, through to control strategies in Heating, Ventilation and Air Conditioning (HVAC) systems and whole buildings. The relationship between Building, Management Systems (BMS) and information technology systems is discussed, and the building procurement process and the importance of considering control requirements at an early stage in the design process
