Surgeons around the world need a basic knowledge of English to keep up to date with advances in their field. Fluency in surgical English is important for your professional development, enabling you to attend English-speaking patients with confidence, to study (or work) in other hospitals, speak confidently at international meetings, and to write articles for international journals. This book will provide you with the basic tools to handle day-to-day situations without stress and will help you to improve your English, no matter what your level. To our knowledge, this is the first English book written specifically by surgeons for surgeons. We are sure that surgical specialists from all over the "non-English-speaking world" (general surgeons, thoracic surgeons, vascular surgeons, neurosurgeons, gynecologists, plastic surgeons) will enjoy reading it.

### **The Hands-on Guide for Junior Doctors**

Are you about to start the Foundation Programme? Do you know what to expect and how to thrive? The Hands-on Guide for Junior Doctors, Fourth Edition, is the ultimate, practical guide for junior doctors and medical students. It helps you tackle the emotional, intellectual and physical demands of being a new doctor and allays common insecurities to help you make the most of your time in clinical practice. This book tells you how to prepare for the daily rigours of hospital life, and will help you meet the required standard. It provides advice on getting started in placements, and helps you develop confidence, with tips on what to do as a junior member of the hospital team, and how to deal with common calls and emergencies. There is also an invaluable chapter on how to perform the practical procedures you'll be assessed on. With the Foundation Programme such a demanding process, both physically and emotionally, this book also provides the kind of information you don't get at medical school, for example, how to look after yourself throughout your training. Take the stress out of the Foundation Programme with The Hands-on Guide!

This textbook is an introduction and guide to undergraduate surgery. It has been a bestseller since its first edition in 2001. The philosophy of this book is to focus on the level of knowledge and the approach that would be expected of the better students reaching the end of their undergraduate training. Avoiding a book that is too cumbersome, we have tried to make

this volume readable and enjoyable, using various techniques to help the reader remember key facts: the text has been deliberately written in a tutorial-like story format as opposed to a set of lists, since this makes it easier to understand and remember. In addition to general surgery, the book contains sections on trauma, orthopaedics, urology and ENT, making it the only comprehensive textbook for medical students wishing to learn top tips in surgery. Subjects that are poorly covered in other main texts — such as fluid balance management and minor surgical procedures — are dealt with in a tutorial fashion in this book, and there is a section on how to problem-solve even in the context of areas unknown to the student. This book is useful for medical students and also for junior doctors during their day-to-day working lives, as well as those coming up to postgraduate exams. Each chapter is written by an authoritative author, alongside the book editors, and they have ensured it remains in the spirit of the bestselling previous editions. Foreword Foreword (31 KB)

A brilliant and courageous doctor reveals, in gripping accounts of true cases, the power and limits of modern medicine. Sometimes in medicine the only way to know what is truly going on in a patient is to operate, to look inside with one's own eyes. This book is exploratory surgery on medicine itself, laying bare a science not in its idealized form but as it actually is -- complicated, perplexing, and profoundly human. Atul Gawande offers an unflinching view from the scalpel's edge, where science is ambiguous, information is limited, the stakes are high, yet decisions must be made. In dramatic and revealing stories of patients and doctors, he explores how deadly mistakes occur and why good surgeons go bad. He also shows us what happens when medicine comes up against the inexplicable: an architect with incapacitating back pain for which there is no physical cause; a young woman with nausea that won't go away; a television newscaster whose blushing is so severe that she cannot do her job. Gawande offers a richly detailed portrait of the people and the science, even as he tackles the paradoxes and imperfections inherent in caring for human lives. At once tough-minded and humane, *Complications* is a new kind of medical writing, nuanced and lucid, unafraid to confront the conflicts and uncertainties that lie at the heart of modern medicine, yet always alive to the possibilities of wisdom in this extraordinary endeavor. *Complications* is a 2002 National Book Award Finalist for Nonfiction.

This issue of the *Surgical Oncology Clinics of North America*, Guest Edited by Dr. William G. Cance, is devoted to Translational Cancer Research for Surgeons. Translational Cancer research aims to move bench research to the bedside by

applying basic science toward potential therapies. This issue will present the concepts of translational research and development of targeted therapeutics, and its implications for surgeons. It will show clinical applications for surgeons regarding sarcoma/GIST, melanoma, colorectal cancer, breast cancer, and endocrine cancer.

### **Body Talk**

As finals approach, medical students often become overwhelmed by the sheer volume of knowledge required to pass all subjects in one go, including surgery, medicine, obstetrics and gynaecology, pharmacology and psychiatry. Clearly the students cannot know each of these subjects in as much detail as they did during their individual attachments and they need to concentrate on important topics rather than minutiae. Whereas existing textbooks cover many topics very well and in great detail, they are lengthy and difficult to read in a short space of time; also some subjects are poorly covered and give no real understanding of practical management and logical thought processes -- the exact requirements for passing finals. Surgical Talk: Surgery for Finals is specifically aimed at helping students pass the surgical final examination; it concentrates on subjects and concepts that tend to confuse students. Each chapter is like a tutorial, providing tips on what to say and when to say it and more importantly a logical approach to answering questions. The book deals with topics poorly covered elsewhere, such as fluid balance, total parenteral nutrition, central lines, drains and surgical antibiotics. It also has comprehensive chapters on orthopaedics and urology. The reader will feel as though they are being taught one to one.

## **Surgical Research**

In 1960, fresh out of a stint in the Air Force, Henry Buchwald was recruited by Dr. Owen H. Wangensteen to join the Department of Surgery at the University of Minnesota's medical school. For an American born in Austria, a child of the Holocaust, a position in a city then considered by some to be the "anti-Semitic capital of the United States" might seem an uneasy fit, but in the culture of innovation created by Wangensteen, Buchwald, who had chafed against the rigidity of East Coast medical practice, found everything an imaginative young surgeon could have asked for. *Surgical Renaissance in the Heartland* is the story of a golden era in American surgery, ushered in by Wangensteen's creative approach to medical practice, told by one who lived it. Buchwald describes the roots, heritage, and traditions of this remarkable period at the University of Minnesota's medical school, where the foundations of open-heart procedures, heart and pancreas transplantation, bariatric surgery, implantable infusion pump therapies, and other medical landmarks originated. Buchwald's account of the Wangensteen era brings to life a medical culture that thrived on debate and the expression of ideas, a clinical practice bound only by the limits of a surgeon's inspiration and imagination. As entertaining as it is informative, *Surgical Renaissance in the Heartland* effectively conjures the character—and characters—of a time that forever changed medicine and the lives of millions.

As the first in the 'Clinical Talk' series, the philosophy of this book is to have a set of question-based sections to help a final-year medical student prepare for exams. These sections include multiple choice questions (MCQs), extended matching questions (EMQs) and case studies. The idea is to have not just a 'test yourself' book, but one which students can work through as a learning exercise as well as for revision purposes. For that reason, the answers and explanations provided here are just as important as the questions themselves. Stansby and Goldberg have structured this book such that it complements one of their bestselling textbooks, Surgical Talk: Revision in Surgery.

Medical students lack information on preparing for clinical surgical finals, particularly on common mistakes and the features which identify successful candidates. The Ultimate Guide to Passing Surgical Clinical Finals is an accessible and comprehensive preparation aid, equipping final year medical students with the knowledge and skills that they are expected to demonstrate both in clinical surgical finals and in clinical practice as junior doctors. Its tutorial-style approach provides

advice on how to think logically, speak coherently, and demonstrate both breadth and depth of knowledge - all key hallmarks of successful candidates. The book's broad approach reflects the full range of skills and knowledge covered by modern curricula, including instruments, procedures and the increasing use of surgical imaging. It is vital reading for clinical year medical students preparing for final examinations in surgery, and for postgraduate students who wish to improve their presentation, viva and OSCE clinical examination skills.
