Integrated Water Resource Management

Buildings are the largest energy consuming sector in the world, and account for over one-third of total final energy consumption and an equally important source of carbon dioxide (CO₂) emissions. Achieving significant energy and emissions reduction in the buildings sector is a challenging but achievable policy goal. Transition to Sustainable Buildings presents detailed scenarios and strategies to 2050, and demonstrates how to reach deep energy and emissions reduction through a combination of best available technologies and intelligent public policy. This IEA study is an indispensable guide for decision makers, providing informative insights on: cost-effective options, key technologies and opportunities in the buildings sector; solutions for reducing electricity demand growth and flattening peak demand; effective energy efficiency policies and lessons learned from different countries; future trends and priorities for ASEAN, Brazil, China, the European Union, India, Mexico, Russia, South Africa and the United States; implementing a systems approach using innovative products in a cost effective manner;

and pursuing whole-building (e.g. zero energy buildings) and advanced-component policies to initiate a fundamental shift in the way energy is consumed.

In 1864 Paraguayan dictator Francisco Solano Lopez seized the Brazilian steamer, the Marques de Olinda, initiating what became the most significant war ever fought in South America. By 1866 Lopez's offensive had ended, replaced by a brutal and protracted Allied siege of Paraguay. Whigham's study takes the story of this epic conflict from this point, describing not only key personalities and various military engagements but also explaining how the war shaped society, how men and women mobilized only to suffer on an unimaginable scale. He shows how thousands of Brazilian, Argentine, and Uruguayan soldiers were killed by 1870 and many more left wounded or broken. On their side, the Paraguayans saw their population fall to less than half its pre-war figure, and the country's economy more or less ceased to function. Yet, for all the devastation it unleashed, the Triple Alliance War also acted as a major catalyst, permanently changing political parameters on the continent and etching the struggle into popular memory in an unforgettable way. The Road to Armageddon is the definitive work on the Triple Alliance War of 1864-1866. There is no other work in English that covers this war in such detail and with such a wide use of sources. Unlike the other works

published on the Triple Alliance conflict, which are based almost exclusively on secondary works, *The Road to Armageddon* is based on a broad consideration of newspaper sources and primary materials from a score of archives and libraries in Brazil, Paraguay, Great Britain, Argentina, Uruguay, Italy, and the United States. In addition to focusing on high politics and the conduct of the war, the study also attempts to examine the conflict from the bottom up, with testimony drawn from poor men and women who witnessed the worst aspects of the war. *The Road to Armageddon* is not the only English-language work on the war, but it is distinctly the most complete. The images, which are relatively unknown in North America, are particularly fine as are the maps.

The High-Performance Two-Stroke Engine

As a leading Confederate general, Braxton Bragg (1817–1876) earned a reputation for incompetence, for wantonly shooting his own soldiers, and for losing battles. This public image established him not only as a scapegoat for the South's military failures but also as the chief whipping boy of the Confederacy. The strongly negative opinions of Bragg's contemporaries have continued to color assessments of the general's military career and character by generations of historians. Rather than take these assessments at face value, Earl J. Hess's biography offers a much more balanced account of Bragg, the man and the officer. While Hess analyzes Bragg's many campaigns and battles, he also emphasizes how his

contemporaries viewed his successes and failures and how these reactions affected Bragg both personally and professionally. The testimony and opinions of other members of the Confederate army--including Bragg's superiors, his fellow generals, and his subordinates--reveal how the general became a symbol for the larger military failures that undid the Confederacy. By connecting the general's personal life to his military career, Hess positions Bragg as a figure saddled with unwarranted infamy and humanizes him as a flawed yet misunderstood figure in Civil War history.

In GM LS-Series Engines: The Complete Swap Manual, expert Joseph Potak walks you through all the steps involved in installing an LS engine into any vehicle, from concept to completion. Variants of GM's groundbreaking family of LS engines are installed in everything from the company's most mundane panel vans to its earth-shaking Corvette ZR1. First underhood in the 1997 Corvette, the LS1, and its successors have proven powerful, reliable, and amazingly fuel efficient. Since that time, more than a dozen variants have been produced, ranging from bulletproof, iron-block 4.8-liter workhorses to the supercharged 7.0-liter LS7. Performance enthusiasts have embraced this remarkable V-8, and it has quickly become a favorite for engine swaps. Why?

The Ethics of Information Warfare

This book addresses the enormous global challenge of providing balanced and sustainable solutions to urgent water problems. The author explores our dependence on access to safe water and other water-related services and how driving forces of the human and natural worlds are degrading this access. The greatest challenges involve conflicts between people and interest groups across all countries, as well as the economic and political difficulties in finding solutions through infrastructure development. The book takes an interdisciplinary approach to Integrated Water Resources Management or IWRM, which provides a set of tools for policy development, planning and organization, assessment, systems analysis, finance, and regulation. The author suggests that IWRM is challenging because of the human element, but that no other process can reconcile the conflicting agendas involved with water management. The broad range of topics covered here, as well as 25 case summaries, will be of interest to scientists, engineers, practitioners, and advanced level students interested in the integrated management of water as a resource.

A history of the Revolutionary War and British occupation in this part of New York, from the Culper spy ring to the prison ships where thousands died. The American Revolution sharply divided families and towns on New York's Long Island. Washington's defeat at the Battle of Long Island in August 1776 started seven years of British occupation—and Patriot sympathizers were subject to loyalty oaths, theft of property, and the quartering of soldiers in their homes. Those who crossed the British were jailed on prison ships in Wallabout Bay in Brooklyn, where an estimated eleven thousand people died of disease and starvation. Some fought back with acts of sabotage and espionage—and Washington's famed Culper spy ring in Oyster Bay, Setauket, and other areas successfully tracked British movements. In this book, historian Joanne S. Grasso explores the story of an island at war.

This book offers an overview of the ethical problems posed by Information Warfare, and of the different approaches and methods used to solve them, in order to provide the reader with a better grasp of the ethical conundrums posed by this new form of warfare. The volume is divided into three parts, each comprising four chapters. The first part focuses on issues pertaining to the concept of Information Warfare and the clarifications that need to be made in order to address its ethical implications. The second part collects contributions focusing on Just War Theory and its application to the case of Information Warfare. The third part adopts alternative approaches to Just War Theory for analysing the ethical implications of this phenomenon. Finally, an afterword by Neelie Kroes - Vice President of the European Commission and European Digital Agenda Commissioner - concludes the volume. Her contribution describes the interests and commitments of the European Digital Agenda with respect to research for the development and deployment of robots in various circumstances, including warfare.

The Prussian army invented modern war processes, and Helmuth von Moltke (1800 - 1891) was the first modern war planner. His accomplishment was to develop, bring to fruition and validate the war processes invented during his lifetime. In this book,

Bucholz examines Moltke's work and the processes he utilised in each of the three wars of German unification: against Denmark (1864), Austria (1865) and France (1870-71). Moltke's achievements have become a legacy for modern military strategists. The procedures he developed have been used in all of the wars of the twentieth century - the Persian Gulf War of 1991 may be its most interesting example - because they respond to the size, space, time and technology mandates of industrial mass warfare. This book describes and analyzes these developments in a unique way, by using organisational, knowledge and learning theory, by looking closely at Moltke's life as a professional soldier and by bringing little-known research in the field to a wider audience.

The Kid Justice Series is trying to send a message to the youth of this world that it is alright to be normal. It's alright to help people in need and that it is wrong to do harm to our fellow men and women. This is the first volume. Volume two is being written at present. The book covers some of the wrong that our young may encounter and the evil forces a city can thrust upon them. It is not trying to scare anyone but does show, in a graphic way, some of the issues all society is confronted with, day in and day out. Kid Justice, (Corey Groves), is a young man, eighteen years of age, who becomes dedicated to fighting crimes of all kinds, and is a young master of the martial arts. His master teacher is Master Jung, his uncle, who becomes his father after Corey's parents are killed in a car accident. Together they create the Justice Team and work alongside the police as a surveillance squad displaying a presence that becomes a deterring force to be reckoned with. The Justice Team starts out with just four members. Corey, Lake, Sheena and their Master Teacher, Master Jung. You'll have to buy the book to find out how they become a team and all the issues they are confronted with. It has action for those who like that. It has romance for the women and some of the issues a young girl might encounter while growing up. So please enjoy! The two continued walking and then suddenly heard a screaming cry for help. Some cultures are clearly more deceptive than others but only during any given slice of time. No single culture has excelled in deceptiveness throughout its history. While the Chinese did rise to the highest level of military deviousness during the time of Sun Tzu (c.350 BC), they had low levels before Master Sun, and afterwards largely lost it during three long periods, only to regain it each time. The most recent Chinese loss was when they fell to the lowest level from the late 1700s until being conquered in 1948 by the stratagemic Chinese Communists (PLA). Thence the PLA has displayed high if not the highest levels of deceptiveness, although there are indications that, beginning in 2002, they are again on the upswing. The levels of guilefulness at any given time can be quite different across the major disciplines of military, domestic politics, foreign diplomacy, and commercial

business. Perceived practical considerations of greed and survival do sometimes override religious, moral, or ethical factors to produce deceptive behavior. The levels of guilefulness at any given point in time between any two contemporary armed entities (nations, insurgents, or terrorists) are apt to be asymmetric. Deception sophistication is independent of technological change. Within each culture deception varies widely in its levels of sophistication. High, medium, and low levels were found in every culture at different times and regardless of its level of technology. The reason? Because deception is a mind game, it is played only between or among humans. And this condition will remain as long as machines such as computers lack artificial intelligence. Because deception is a mind game, the variations in guilefulness between opposing individuals or groups can be crucial in deciding the victor in combat.
