Paediatric Cardiology

This book covers all aspects (biological, pathological, genetic, clinical and therapeutic) of arrhythmogenic right ventricular cardiomyopathy/dysplasia, a recent cardiomyopathy which represents a very high risk of sudden death in the young and in the athletes. This monograph gathers the results of a five-year research program on ARVC/D which allowed the discovery of 5 disease-causing genes, thus opening new avenues for the early identification of affected patients.

Cardiology Explained

One of the most time-consuming tasks in clinical medicine is seeking the opinions of specialist colleagues. There is a pressure not only to make referrals appropriate but also to summarize the case in the language of the specialist. This book explains basic physiologic and pathophysiologic mechanisms of cardiovascular disease in a straightforward manner, gives guidelines as to when referral is appropriate, and, uniquely, explains what the specialist is likely to do. It is ideal for any hospital doctor, generalist, or even senior medical student who may need a cardiology opinion, or for that matter.

Arrhythmogenic RV Cardiomyopathy/Dysplasia

Cardiac Arrhythmias 1999

Therapy in cardiology has advanced enormously in recent years. This has resulted in the organization of many meetings and the publication of numerous books dedicated to examining the latest aspects of, for instance, pharmacologic, electrical and surgical treatment. However, only a few of these meetings and publications have attempted to present an overall review of all advances that have taken place in the field of therapy. In the last years the Spanish Society of Cardiology has shown a great interest in the continuous medical education in cardiology. The Society has organized various meetings and has published several books on the above-mentioned topics. Consequently, the Society has decided to publish this book, an update of the therapeutics in cardiology, of which a Spanish version is also available. World renowned experts and outstanding Spanish cardiologists were invited to review all aspects of therapy in cardiology. We would like to thank the Spanish Society of Cardiology and the Catalan Cardiac Society for the generous assistance they have given us during all stages of book preparation. We also would like to express our appreciation to all the authors for their valuable contributions. Their combined efforts enable us to put this volume in the hands of the reader.

Heart Failure: A Companion to Braunwald's Heart Disease E-book

This book is a practical guide to the differential diagnosis and treatment of patients presenting in the Emergency Department with syncope or arrhythmias, including bradyarrhythmias, atrial fibrillation, narrow and wide QRS tachycardias. In addition, clear advice is provided on the management of patients with cardiac devices and possible dysfunction, electrical storm, or a requirement for urgent surgery. For each topic, a literature review of epidemiology, physiopathology, differential diagnosis, and treatment is conducted. The book is designed both for emergency physicians and cardiologists, who will be the first to evaluate and treat patients with arrhythmias or potentially arrhythmic problems in the emergency setting. It will also be a useful textbook for students and residents in Cardiology and Emergency Medicine.

Braunwald's Heart Disease E-Book

The first invasive evaluation of cardiac arrhythmias in humans was performed in 1967 in Paris (Prof. P. Coumel) and Amsterdam (Prof. D. Durrer). This was the start of a rapid increase in our knowledge of the diagnosis, mechanism and treatment of cardiac arrhythmias. In that same year Prof. Hein J.J. Wellens became cardiologist in the Wilhelmina Gasthuis in Amsterdam. Initially in Amsterdam (1967-1977) and later on in Maastricht (from 1977), he was the driving force for many breakthroughs in clinical cardiac electrophysiology. With an active interplay

between the knowledge derived from the 12-lead electrocardiogram and the recordings made with invasive electrophysiology, he composed new ideas leading to major contributions in clinical cardiac electrophysiology and, more generally, in arrhythmology. He published over 650 scientific papers and 14 books, and had numerous functions within scientific boards of prestigious journals. In addition he trained more than 120 cardiologists in clinical cardiac electrophysiology. On the occasion of the congress '2000, Future of Arrhythmology: Lessons From the Past, Promises For Tomorrow', we highlight the scientific work of Prof. Hein J.J. Wellens. A selection of more than 60 articles over the whole time span has been selected. These articles are accompanied by comments from an expert, co-worker and/or former fellow in order to place the paper in a scientific time frame, including the relationship of the author with Prof. Hein J.J. Wellens.

Cardiovascular Critical Care

Implantable cardioverter-defibrillators (ICDs) are electronic devices installed in the chest to prevent sudden death caused by abnormally fast heart rhythms. Cardiac electrophysiologists are the physicians usually responsible for implanting and maintaining these devices. The technology for ICDs is rapidly evolving, and the articles in this issue will help electrophysiologists to keep up to date with the current generation of ICDs, including selection of patients who are appropriate for the device, monitoring patients after the device is implanted, and troubleshooting problems with the device.

Lectures and Structured Symposia

Clinical and Electrophysiologic Management of Syncope, An Issue of Cardiac Electrophysiology Clinics,

Based on best practices prescribed in The Guide to Physical Therapist Practice, Essentials of Cardiopulmonary Physical Therapy, 3rd Edition provides comprehensive coverage of anatomy and physiology, assessment, and aspects of the cardiopulmonary systems, with a focus on their interaction. The disablement model is used in describing the eight cardiopulmonary practice patterns. Expert author Ellen Hillegass also discusses pathophysiology, pharmacology, and interventions in the outpatient setting. Incorporating Guide language, her practical approach progresses logically from basic sciences through intervention, and

emphasizes lifespan considerations. Material follows The Guide to Physical Therapist Practice 2nd Edition, reflecting best practices as defined by the American Physical Therapy Association. Evidence-based content is based on the latest research in the field. Case studies show the application of concepts with real-world examples. Pharmacology chapters reflect both the rehabilitation background of physical therapists and the pharmaceutical expertise of a pharmacist. A focus on wellness follows the disablement model. Information on geriatric and pediatric cardiopulmonary physical therapy is easy to apply to patient situations. Testing for both cardiac and pulmonary dysfunction is conveniently located in a single chapter. Cardiovascular medication information covers the latest drugs used in cardiopulmonary physical therapy. Information on thoracic organ transplantation simplifies and explains these complex procedures. NEW chapters cover the lymphatic system and pediatrics. Revised chapters on cardiopulmonary anatomy and physiology differentiate between information that is need to know and that is nice to know. An Evolve companion website includes medical animations to illustrate concepts, along with a glossary, glossary exercises, and reference lists from the book linked to MEDLINE abstracts.

Cardiac Arrhythmias 2005

The year 1988 marked the beginning of the International Workshop on Cardiac Arrhythmias. This biannual series of meetings was initiated with the following goals: (1) to present technological advances in the field of cardiac arrhythmias, (2) to publicise the results of current research, and (3) to assess the impact of new diagnostic and therapeutic approaches. In addition, by bringing together experts in this field, controversial aspects in the diagnosis and treatment of cardiac arrhythmias could be discussed, allowing a consensus to be reached regarding the evaluation and management of specific disease conditions. The success achieved in reaching these goals and the utility of the workshops have been confirmed by their increasing recognition and level of attendance. The Proceedings of the Ninth Edition of the Workshop is a compilation of the topics presented at the most recent meeting, which was held in Venice at the Fondazione Giorgio Cini from the 2nd to the 5th of October 2005.
