Cambridge, England. Spearman's mission is to scout out for purchase the most famous house in economic science: Balliol Croft, the former dwelling place of Professor Alfred Marshall, John Maynard Keynes's teacher and the font of modern economic theory. A near miss for the American entrepreneur and the shocking and bizarre murder of Nigel Hart, the master of Bishop's College, soon make it clear that the whole affair is risky business. When a second corpse turns up, Spearman is jolted into realizing that his own life is in peril as he finds himself face to face with the most diabolical killer in his experience.

Greenberg's Guide to Ives Trains, 1901-1932

For decades the crown jewels of Japan's postwar manufacturing industry, motorcycles remain one of Japan's top exports. Japan's Motorcycle Wars assesses the historical development and societal impact of the motorcycle industry, from the influence of motor sports on vehicle sales in the early 1900s to the postwar

developments that led to the massive wave of motorization sweeping the Asia-Pacific region today. Jeffrey Alexander brings a wealth of information to light, providing English translations of transcripts, industry publications, and company histories that have until now been available only in Japanese. By exploring the industry as a whole, he reveals that Japan's motorcycle industry was characterized not by communitarian success but by misplaced loyalties, technical disasters, and brutal competition.

The thrilling final installment in Tanya Huff's military sci-fi adventure Confederation series Gunnery Sergeant Torin Kerr was the very model of a Confederation Marine. She'd survived more deadly encounters than anyone in the Corps. No one who'd ever served with her could imagine her walking away from the Corps. But that was before Torin had learned the truth about the war the Confederation was fighting...before she'd been declared dead and had spent time in a prison that shouldn't exist. It was Salvage Operator Craig Ryder who had refused to believe Torin was dead. Craig who found and rescued Torin. And so, when her mission was complete, Torin resigned from the Marines to start a new life with Craig aboard his tiny salvage ship, the Promise. But civilian life was a lot rougher than Torin had imagined. The salvage operators were losing cargo and lives to pirates. Because salvagers were an independent lot unwilling to turn to the OutSector Wardens for help, no one in authority seemed to take their ever-increasing threat seriously. Then, on their first real run together, pirates attacked the Promise, kidnapping Craig and leaving Torin to die. But leaving Torin behind to die was never a good strategy. Against all odds, she survived, and certain—despite no evidence to prove her correct—that Craig was still alive, she decided to mount a rescue mission. When Craig's salvager friends refused to join her, Torin had no choice but to call in the Marines—some very special Marines. Then she discovered why the pirates had been trying to kidnap salvagers. And suddenly Torin's mission expanded from

saving Craig to stopping the pirates from changing the balance of power in known space.

It discusses the theory required to support the art of designing a working controller as well as the various aspects to convince a client, employer, or examiner of your expertise. For the Dignified Dead

Founded in 1701 by Antoine de le Mothe Cadillac as a trading post and fort, Detroit had a turbulent early history. Captured by the British in 1760, ceded to the United States in 1783, and destroyed by fire in 1805, Detroit nevertheless prospered throughout the nineteenth century because of its strategic position. The twentieth century saw the rise and demise of the auto industry and despite the city's troubled recent past, a new Detroit is rising to meet the economic challenges of the twenty-first century. This book is a fascinating document of history and change in one of the United States' most important cities. Sites include: Woodward Avenue, Detroit Waterfront, Campus Martius, Jefferson Avenue, Cadillac Square, Capitol Park, J.L. Hudson Company, City Hall, Wayne County Building, Grand Circus Park, Michigan Theater, Capitol Theater, Fox Theatre, YMCA Building, Detroit

Athletic Club, Eastern Market, Elmwood Cemetery, Belle Isle Casino, Scott Fountain, Palmer Park, Hurlbut Memorial Gate, Cass Tech, Tiger Stadium, Wagner Baking Co., Michigan Central Railroad, Ambassador Bridge, Orchestra Hall, Piety Hill, Detroit Public Library, the General Motors Building and much more.

Author Ned Mohan has been a leader in EES education and research for decades. His three-book series on Power Electronics focuses on three essential topics in the power sequence based on applications relevant to this age of sustainable energy such as wind turbines and hybrid electric vehicles. The three topics include power electronics, power systems and electric machines. Key features in the first Edition build on Mohan's successful MNPERE texts; his systems approach which puts dry technical detail in the context of applications; and substantial pedagogical support

including PPT's, video clips, animations, clicker questions and a lab manual. It follows a top-down systems-level approach to power electronics to highlight interrelationships between these sub-fields. It's intended to cover fundamental and practical design. This book also follows a building-block approach to power electronics that allows an in-depth discussion of several important topics that are usually left. Topics are carefully sequenced to maintain continuity and interest.
