Native American cultures of Puerto Rico prior to the arrival of the Spanish in 1493. A book on the prehistory of a modern geopolitical entity is artificial. It is unlikely that prehistoric occupants recognized the same boundaries and responded to the same political forces that operated in the formation of current nations, states, or cities. Yet, archaeologists traditionally have produced such volumes and they generally represent anchors for ongoing research in a specific region, in this case the island of Puerto Rico, its immediate neighbors, and the wider Caribbean basin. To varying degrees, this work addresses issues and draws data from beyond the boundaries of Puerto Rico because in prehistoric times the water between islands likely was not viewed as a boundary in our modern sense of the term. The last few decades have witnessed a growth of intense archaeological research on the island, from material culture in the form of lithics, ceramics, and rock art; to nutritional, architecture, and environmental studies; to rituals and social patterns; to the aftermath of Conquest. Ancient Borinquen provides a comprehensive overview of recent thinking, new data, syntheses, and insights into current Puerto Rican archaeology, and it reflects and illuminates similar concerns elsewhere in the West Indies, lowland South America, and Central America.

On October 1, 1962, James Meredith was the first African American student to enroll at the University of Mississippi. Preceded by violent rioting resulting in two deaths and a lengthy court battle that made it all the way to the Supreme Court, his admission was a pivotal moment in civil rights history. Citing his "divine responsibility" to end white supremacy, Meredith risked everything to attend Ole Miss. In doing so, he paved the way for integration across the country. Originally published in 1966, more than ten years after the Supreme Court ended segregation in public schools in *Brown v. Board of Education*, Meredith describes his intense struggle to attend an all-white university and break down long-held race barriers in one of the most conservative states in the country. This first-person account offers a glimpse into a crucial point in civil rights history and the determination and courage of a man facing unfathomable odds. Reprinted for the first time, this volume features a new introduction by historian Aram Goudsouzian.

'In the increasingly data-swamped world of education, data literacy is no longer a desirable skill, it is essential. Databusting for Schools is part guide through the complexities, uses and limitations of data; and part challenge to those who too readily make assumptions and draw conclusions. This is an important book.' James Pembroke, independent data

analyst Data rules schools and ignorance is far from bliss. From assessment results to questioning educational claims, there is a growing need to understand the numbers used in education. Education data blogger and teacher Richard Selfridge (aka Jack Marwood) unravels the complexities of dealing with educational data and explains statistics in an understandable, everyday way, relevant to your classroom and your school. He will take you through all you need to know about data and statistics in education including:

- Where does education data come from?
- The what, why and how of numbers.
- Understanding different types of graphs and how to use them.
- How to play around with data to see the bigger picture.
- How to interpret data, does one thing really lead to another?
- Using data to inform school policy.

A must-read for all teachers, school leaders, data managers, school governors, and anyone in education who has ever looked at statistical data and broken out into a cold sweat. Richard Selfridge is a primary school teacher and writer on education. He is author of the popular datablog *Icing on the Cake* and tweets under the sometime pseudonym @Jack_Marwood.

What constitutes quality schooling? What are the implications for educational practice and administration? The text looks at these questions and examines international research evidence and reform initiatives with particular emphasis on North America, UK, Australasia and the Third World. It offers a synopsis of the Third World School Effects Research (SER). The authors claim that the challenges now facing educational leaders is to find a balance between SER and the other school movements and to ask more demanding questions of our educational systems.

Learning in the Museum examines major issues and shows how research in visitor studies and the philosophy of education can be applied to facilitate a meaningful educational experience in museums. Hein combines a brief history of education in public museums, with a rigorous examination of how the educational theories of Dewey, Piaget, Vygotsky and subsequent theorists relate to learning in the museum. Surveying a wide range of research methods employed in visitor studies is illustrated with examples taken from museums around the world, Hein explores how visitors can best learn from exhibitions which are physically, socially, and intellectually accessible to every single visitor. He shows how museums can adapt to create this kind of environment, to provide what he calls the 'constructivist museum'. Providing essential theoretical analysis for students, this volume also serves as a practical guide for all museum professionals on how to adapt their museums to maximize the educational experience of every visitor.

The present state of the university is a difficult issue to comprehend for anyone outside of the education system. If we are to believe common government reports that changes in policy are somehow making life easier for university graduates, we cannot help but believe that things are going right and are getting better in our universities. Ivory Tower Blues gives a decidedly different picture, examining this optimistic attitude as it impacts upon professors, students, and administrators in charge of the education system. Ivory Tower Blues is a frank account of the contemporary university, drawing on the authors' own research and personal experiences, as well as on input from students, colleagues, and administrators. James E. Côté and Anton L. Allahar offer an insider's account of the university system, an accurate, alternative view to that overwhelmingly presented to the general public. Throughout, the authors argue that fewer and fewer students are experiencing their university education in ways expected by their parents and the public. The majority of students are hampered by insufficient preparation at the secondary school level, lack of personal motivation, and disillusionment. Contrary to popular opinion, there is no administrative or governmental procedure in place to maintain standards of education. Ivory Tower Blues is an in-depth look at the crisis facing Canadian and American universities, the factors that are precipitating the situation, and the long-term impact this crisis will have on the quality of higher education.

In 1982, when my book *The Social Psychology of Tourist Behaviour* was published, it was almost possible to review academic research on tourism. In 1988, in a book of similar scale, such a review is almost impossible. The aim of the present volume is, therefore, to outline a body of work which adopts a consistent theme and method in exploring the topic of tourism. The approach is one of emphasising tourists' reactions and behaviours. The work is both behavioural and cognitive, and stems principally from applied traditions in social and environmental psychology. The examples of tourist studies tend to be Australian, British, and North American, principally because work elsewhere in psychological studies of tourists is less well organised. The nationality of the researchers should not, however, confine the application of the research findings, since while the examples may be specific the results are applicable in Brisbane, Bognor or Bogota. The book is intended not just for academic tourism researchers but also for all psychologists, so that they might note an understudied phenomenon within their discipline. For leisure researchers it is hoped that it will provide an opportunity for them to see developments parallel to their own research efforts in studying recreational behaviour. Is it also a volume for tourism managers and executives? In part it is, and the sections such readers might find of particular interest are Chapters 1, 2, 3 and 9.

Straight Talk about Mental Tests

Exhibition environments are enticingly complex spaces: as facilitators of experience; as free-choice learning contexts; as theaters of drama; as encyclopedic warehouses of cultural and natural heritage; as two-, three- and four-dimensional storytellers; as sites for self-actualizing leisure activity. But how much do we really know about the moment-by-moment transactions that comprise the intricate experiences of visitors? To strengthen the disciplinary knowledge base supporting exhibition design, we must understand more about what 'goes on' as people engage with the multifaceted communication environments that are contemporary exhibition spaces. The in-depth, visitor-centered research underlying this book offers nuanced understandings of the interface between visitors and exhibition environments. Analysis of visitors' meaning-making accounts shows that the visitor experience is contingent upon four processes: framing, resonating, channeling, and broadening. These processes are distinct, yet mutually influencing. Together they offer an evidence-based conceptual framework for understanding visitors in exhibition spaces. Museum educators, designers, interpreters, curators, researchers, and evaluators will find this framework of value in both daily practice and future planning. Designing for the Museum Visitor Experience provides museum professionals and academics with a fresh vocabulary for understanding what goes on as visitors wander around exhibitions.
